

INSTALLATION/CONVERSION OF STORAGE TANK SYSTEMS STORING ALTERNATIVE FUELS

Installation of a new storage tank system, or conversion of an existing storage tank system, to store alternative fuels or fuel blends may require submittal of the new [Alternative Fuel Storage Tank Installation/Conversion Form](#). This form is used to ensure compatibility of tank system components with gasoline blends containing greater than 10% alternative fuel, and biodiesel blended fuels containing greater than 5% biodiesel.

A Fact Sheet, [Underground Storage Tank \(UST\) Equipment Compatibility & Storage of Biofuels and Biofuel Blends](#), has been developed to explain the compatibility concerns of UST system components with alternative fuels and alternative fuel blends.

If you have any questions regarding the installation, conversion, or operation of storage tank systems storing alternative fuel products, please contact the Division of Storage Tanks at 1-800-42TANKS (in Pa.) or 717-772-5599.
