

Ready. Set. DEN/OLE REU/OLE

In that race against time, Lebanon County has reached the finish line way ahead of schedule. In 1995 Lebanon County recycled 34% of its total waste generated as compared to the 25% state mandate by 1997. As we look back upon recycling in its primary stages, we see that Lebanon County has successfully hurdled many milestones. The most pressing being the fluctuating markets. Markets are down, yet spirits are high. Recycling in Lebanon County continues to climb that ladder of success. The unrelenting support of Lebanon County waste haulers to collect recyclable materials during times of economic slumps in markets has been key to the success of Lebanon County's recycling programs. In 1995, Lebanon County increased its residential recycling tonnage by over 4000 tons. Residents of the County demonstrate an overwhelming desire to recycle.

Yet it is the steadfast efforts of Lebanon County waste haulers who faithfully collect recyclables even when markets reach record lows. As we enter the final stages in this race against time, Lebanon County holds its position as one of the leading recycling counties in the state of Pennsylvania. So...Let's go Lebanon County residents, waste haulers and businesses... Continue to keep Lebanon County a lap ahead!!!

PLASTICS

Recycling Plastic is as Easy as #1...#2...

Recycling a milk jug, a soda bottle or a laundry detergent bottle has become a routine function in the average household on a daily basis...Separate the #1's from the #2's...Throw away the #3's, #4's, #5's, #6's and #7's. But what does the little number on the bottom of the container really mean...And why can't we recycle the #3's, #4's, #5's, #6's and #7's??? If a margarine tub is a #2, then why can't we recycle it with the other #2's??? Plastic is plastic, right?... Wrong!!! Recycling plastics is a little confusing...hopefully many of your questions will be answered making the recycling experience in your home a much easier and a more enjoyable task...

All recycling collection programs in Lebanon County, whether curbside or drop-off, accept plastic. It is important to note that this includes only certain types of plastic. Some specific examples are soda bottles (#1 PET or PETE), milk and waster jugs (#2 HDPE) and colored laundry bottles (also #2 HDPE). In Lebanon County any **bottle** coded #1 PET, #1 PETE, or #2 HDPE is recyclable...The key word here is **bottle**...

The success of a community's recycling program depends upon public participation and the quality of the materials collected. The types of plastics collected in Lebanon County's curbside and drop-off recycling programs have caused some confusion relative to determining what should and should not be put into the recycling bin and why. While many people believe that all plastics are the same...they are not!!!

There are many different types of plastics, just as there are different types of metals and different grades of paper. Plastics need to be sorted just as newspaper must be separated from corrugated cardboard before it can be recycled.

Why are containers made of different plastic types?

Different types of plastics are used in packaging because they serve different functions. PET or PETE is used to make soda bottles because it holds carbonated beverages well. HDPE is used for milk jugs and detergent bottles because the properties of HDPE allow it to be molded with a handle. In order for the plastics to retain these properties when they are recycled into new products, these different plastics must be separated from one another.

Why can't all #1 & #2 plastic containers be recycled?

Plastics are made up of building blocks called hydrocarbons, derived from petroleum or natural gas. These monomers (small molecules) are chemically bonded into chains called polymers or plastic resins. Different combinations of monomers yield resins with special properties and characteristics. The code number on the bottom of a plastic container identifies the general resin type of that container. But even with these general resin types, differences exist among some containers. For example, both a milk jug and a margarine tub are coded #2 HDPE. A milk jug is a **bottle**, or a blow-molded container. The margarine tub is an injection-molded container. The two melt at different temperatures...one at a very high temperature, the other at a very low temperature. If the two are mixed together in the recycling process, they would produce a container with mixed properties; not a useful container to the packaging industry. Markets for post-consumer, blow-molded, #2 HDPE bottles are relatively strong and consistent. Markets for injection-molded HDPE are very weak, almost nonexistent.

What plastics are recyclable?

It is important to realize that just because a bottle or container has the chasing arrows and the number located on the bottom, it does not necessarily mean that it can be recycled. The symbol is only intended to tell recycling processors and manufacturers what type of plastic the container is made from. According to the American Plastics Council (APC), the symbol was not meant for use by consumers as an identifying tool. Realistically, however, the code **has** become an identifier for consumers.

So, how do you tell what is and what is not recyclable? In Lebanon County only the following plastics are recyclable:

all **bottles** coded # 1 PET or #1 PETE

all bottles coded #2 HDPE

A **bottle** is a container with a neck that is smaller in diameter than the bottom.

All caps and lids should be removed. Most caps and lids are made from a different resin than the bottle itself.

For plastic recycling to work best, bottles must be flattened. Step On It...50% more space is created for recyclables in the bin.

What about the other plastics?

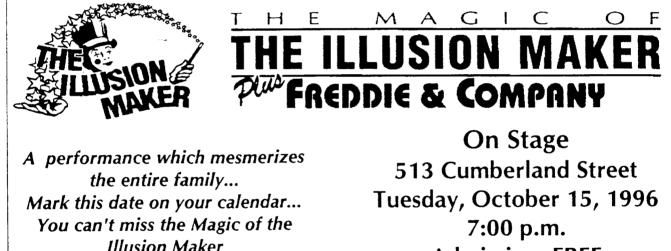

Plastic grocery bags can be recycled at many of the local larger chain grocery stores. Any other types of plastic containers, the #3's, #4's, #5's, #6's and #7's, should be disposed of in the regular trash. Other types of plastic goods such as storage containers, toys, flower pots, laundry baskets, etc. are trash, **not** recyclables, and should be disposed of in the garbage also.

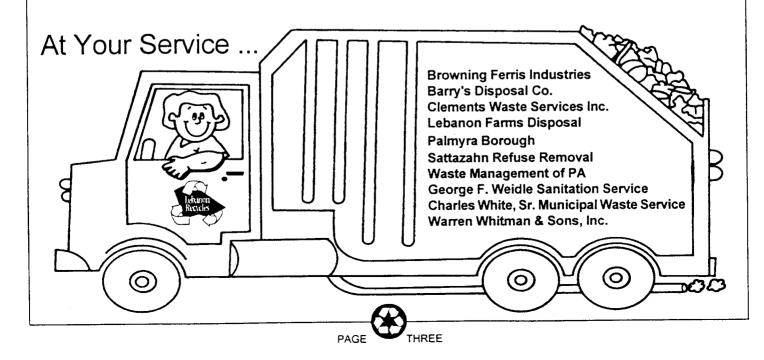

How Do I Get Rid Of ...

One of many commonly asked questions in regards to recycling is.....What do I do with leftover paint? The best way to deal with leftover paint is not to produce it in the first place. It is important that we as consumers only purchase the amount of paint needed for the job at hand and then use it up. But if some paint does happen to be leftover, it can be stored for touch-ups and other projects. Properly stored paint can last for years. Simply place a piece of plastic wrap over the opening of the can, secure the lid, then flip the can over Inside, the paint will form a seal around the lid and keep the paint fresh. Excess usable paint can also be donated to local churches, school theatre groups and other civic organizations. As a last resort, leftover paint can be air-dried and disposed of in the regular trash. To speed up the drying process, remove the lid, mix the paint with cat box litter, saw dust or shredded newspaper and then leave it to **completely** dry. These materials will absorb the paint and, once dry, may be disposed of normally.

Recycles

Curbside Collection Programs Throughout Lebanon County

hirteen individual curbside collection programs exist throughout Lebanon County. Each program differs in the type of materials collected and the frequency of collection. Listed below are the curbside programs, a brief description of each and a contact.

Annville Township: Annville, the youngest of the voluntary curbside collection programs, successfully recycled 21% of its total waste generated in 1995. The Township has contracted its waste disposal and recycling services to Browning Ferris Industries (BFI). Residents are asked to purchase a recycling container from the township for \$5.00. Acceptable items include clear, green, and brown glass bottles and jars, aluminum cans, bimetal cans, plastic soda bottles, plastic detergent bottles, plastic milk jugs, office paper and newspapers. Contact the Township Office at 867-4476 with questions.

Cleona Borough: Cleona continues to maintain its status as the oldest voluntary curbside collection program in the county since 1971. Borough residents should contact Browning Ferris Industries (BFI) to arrange for waste and recycling services. Acceptable items include clear, green and brown glass bottles and jars, aluminum cans, bimetal cans, plastic drink, cleanser, and detergent bottles marked PET #1 and HDPE #2, newspaper and corrugated cardboard. Call Lisa Daubert at 272-7167 with any questions.

Lebanon City: Recycling is mandatory for residents of the City who are asked to contact one of the licensed haulers to arrange for waste and recycling services. Different haulers provide different services. It is wise to find out which hauler is best suited to meet your particular needs. Call the City's recycling hotline at 273-6711 ext. 2444 for the list of haulers and any other recycling questions.

LebCOG: Lebanon Council of Governments (LebCOG) consists of five neighboring municipalities who signed an agreement to develop curbside programs: Cornwall Borough, Mt. Gretna Borough, South Annville Township, South Londonderry Township, and West Cornwall Township. In 1995 LebCOG doubled its recycling figures from 8% to 16%. Licensed haulers for the LebCOG area include: BFI, Lebanon Farms Disposal, Warren Whitman & Sons, and Waste Management. Residents are asked to contact their municipal office or a hauler with questions.

North Lebanon Township: North Lebanon Township holds the highest municipal recycling rate in the County. In 1995 the Township recycled 34% of its total waste generated. Residents of this mandated community must contract directly with one of the licensed haulers for recycling services. Acceptable items include: clear, green and brown glass, aluminum cans, bimetal cans, plastic drink, cleanser and detergent bottles (PET #1 and HDPE #2). Recycling containers are available at the Township Building. Contact Tina Haser at 273-7132 with questions.

North Londonderry Township: Residents of North Londonderry's mandated community are required to select one of the following authorized haulers: Browning Ferris Industries (BFI), Warren Whitman & Sons or Waste Management. Haulers will provide a recycling container. Acceptable items include: newspapers, clear, green, and brown glass bottles and jars, aluminum cans, bimetal cans, plastic beverage, cleanser, and detergent bottles (PET#1 and HDPE #2). Contact Gordon Watts at 838-1373 with any questions.

Palmyra Borough: Recycling collection services for this mandated community are provided by the Borough. Containers are available at the municipal building at no cost. Acceptable materials for recycling include: clear, green, and brown glass bottles and jars, aluminum cans, bimetal cans, newspapers, and plastic beverage, cleanser, and detergent bottles coded PET #1 and HDPE #2. Call the Borough Office at 838-6361 with any guestions.

South Lebanon Township: Residents of South Lebanon, yet another of the mandated communities, are asked to contract waste and recycling services through a hauler of their choice. It is important to compare services and select the hauler that best meets your needs. Recycling containers can be picked up at the Township Building at no cost. Acceptable items include: clear, green, and brown glass bottles and jars, aluminum cans, bimetal cans and newspapers. Contact Curt Kulp at the Township Office at 274-0481 with questions.

West Lebanon Township: West Lebanon Township also successfully operates a voluntary curbside program. Residents of the Township should contact Browning Ferris Industries (BFI) to arrange for waste and recycling services. Containers can be picked up at the Township Building at no cost. Acceptable items include: clear, green, brown glass bottles and jars, aluminum cans, bimetal cans, newspapers, plastic milk jugs, soda bottles, and detergent bottles. Please call the Township Office at 274-1598 with any questions.

Safe Disposal of Hard to Dispose of Items

tems such as used motor oil, antifreeze, automobile tires and batteries should not be tossed in the garbage, poured down a drain, buried in the ground or burned in a backyard. There are safer methods of disposal which do not pose a threat to the environment. The following is a list of local businesses located throughout Lebanon County that will accept one or more of the following items for disposal. Depending on where you go, a disposal fee may be required on the items listed below. The disposal fee for tires generally ranges from \$1 to \$4.
