CERTIFIED MAIL NO. [REDACTED]

[REDACTED]

Re: 58 Pa. C.S. § 3218 Determination
Water Supply Request for Investigation No. 291602

[REDACTED]

Union Township, Tioga County

Dear [REDACTED]

The Department has completed its investigation of your water supply located at the above address ("Water Supply"). Based on the sample results reviewed and supplementary information obtained to date, the Department has determined that the Water Supply was temporarily affected by oil and gas activities but has returned to background conditions. The Department's investigation into your complaint is set forth below.

Parameters	Unit	Pre-Drill	Initial Response	Current Level
Methane	mg/L	<2.50	51.6	2.14

Summary of Investigation

On June 17, 2012, the Department was notified by a nearby oil and gas operator of elevated methane levels in the Water Supply. During inspections conducted by the Department and others during the course of the investigation, methane gas was observed in the water and the headspace of the Water Supply. Samples from the Water Supply were collected on numerous occasions throughout the course of the investigation. Those samples were submitted to a Pennsylvania-accredited laboratory or the Department's laboratory in Harrisburg for analysis, and the results of those samples were previously provided to you.

Initial results of samples from the Water Supply showed that the Water Supply had levels of methane above expected background conditions. However, additional sampling results revealed that those levels have returned to levels which are below the Department's unofficial action level for methane and that these concentrations are at or near expected background conditions.

Based on the Department's investigation, the Department has determined that the impacts to the Water Supply were temporary and that the quality of the Water Supply is now at or near

background conditions. As a result, the Department does not plan to require further action regarding the Water Supply.

Please contact William J. Kosmer, P.G. at 570-974-2613 should you have any questions concerning this matter.

Sincerely,

Jennifer W. Means
Environmental Program Manager
Eastern Oil and Gas District

Re: 58 Pa.C.S § 3218 Determination
Complaint No. 291603
Union Township, Tioga County

Dear [REDACTED]

The Department has investigated the possible degradation of your water supply well located at [REDACTED] in response to a 6/19/2012 complaint that gas well drilling activities may have affected your water well. On several occasions, samples were collected from your water supply. The samples were submitted to an independent third party laboratory for analysis, and the analytical results are summarized in the attached Table. The sample results showed methane was present at $<0.24 - 137$ mg/L in your water supply. At this time, the Department's investigation indicates that gas well drilling has impacted your water supply.

Methane is the predominant component of natural gas. Federal water standard limitations have not been established for methane gas. The level of concern begins above 28 mg/l methane, which is referred to as the saturation level. At this level, under normal atmospheric pressure, the water cannot hold additional methane in solution. This may allow the gas to come out of the water and concentrate in the air space of your home or building. There is a physical danger of fire or explosion due to the migration of natural gas into water wells or through soils into dwellings where it could be ignited by sources that are present in most homes/buildings. Natural gas can also cause a threat of asphyxiation, although this is extremely rare.

When the Department is made aware of methane levels greater than 7 mg/l, we notify the water supply owner of the hazards associated with methane in their water supply. Please be aware however, that the methane levels can fluctuate. This means that even with a relatively low level of methane, you should be vigilant of changes in your water that could indicate an increase in methane concentration.

It is the Department's recommendation that all water wells should be equipped with a working vent. This will help alleviate the possibility of concentrating these gases in areas where ignition would pose a threat to life or property. Please note that it is not possible to completely eliminate the hazards of having natural gas in your water supply by simply venting your well.

1/14/2013

[REDACTED]

The Department is continuing to work to permanently resolve this issue. Should you have any questions concerning this matter, please feel free to contact William J. Kosmer, P.G. at 570-974-2613.

Sincerely,

Jennifer W. Means
Environmental Program Manager
Oil and Gas Management
