

Testimony in support of the atlantic sunrise pipeline june 12,2017 by Roy  
WhiteHorse a.k.a. (Robertson) 717-740-3186

.....Good evening folks...thank you for the opportunity to offer my opinion regarding the atlantic sunrise pipeline...specificly the lancaster co. sector...chapters 105 & 102 permits...Its important to note the vast misinformation circulating in opposition to this proposed and necessary infrastructure that seeks to alleviate currently insufficient & eroding pipeline...its imperative this project proceed without impediance due to the thousands of miles of eroding pre ww2 infrastructure that prior political administrations cut funding for their maintenance in the name of populist tax breaks...those negative factors are now a major national contention that must be addressed and williams partners has stepped up to the plate to help us accomplish this tremendous task ensuring & prolonging our continued health & safety for many generations to follow...

I also feel it necessary to shed light and truth in testimony to the integrity & professionalism williams partners has displayed previously regarding the original proposed route...specificly chiefs hill of conestoga pa...they were accutely sensitive to historical indigenious burial sites and voluntarily at the cost of im sure astronomical figures re routed its proposal to appease our communities....this speaks volumes regarding the executives motivation...intentions & character in addition to the 100s of thousands invested within local communities in the form of donations to first responders..schools...conservation projects & various institutions...

their track record is highly comendable and its time we all support our nations infrastructure..its workers...our economy & health... pipeline contributions have totaled more than a billion in royalties & 500 million in bonuses alone since 2006 within our commonwealth...

this proposed route will stimulate labor & growth to the tune of millions that local people working directly recieve set apart from contributing landowners within this project..with safety as their top priority & from boots on the ground...I can unequvicley declare these labourous task forces of men and women are highly

trained professionals with extensive certifications...continual training...knowledge & intestinal fortitude required to see tasks completed with our best interests at heart & mind despite emotionally charged resistance that only jeopardizes us all... pipelayers & company are responsible for the health of our nation and they take their jobs very seriously with that in mind...

soil impact will be minimal..possible archeological discoveries will be preserved..water will be protected and that utilized during construction rendered harmless and returned to the earth..dont fall victim to false & trendy propaganda ... land will be beautified upon completion of proposed projects and absolute minimal to zero footprint will remain...just stimulus & growth for pennsylvania... its imperative as americans we stand with & support our commander in chief through his endeavours of rebuilding infrastructure and the men on the ground completing these enormous tasks...the common worker...impeding their efforts will only lead to imminent catastrophe & disaster that will negatively affect us all beyond redemption & repair...let these men do their job...bring us heat...wealth...gas for cooking...product for export further stimulating growth & energy independence and let us simply be....good americans....SO HELP ME GOD...I Testify...

Thank you
