^a Format allows jurisdictions to collapse and summarize loads by State/District, major basin within the State/District, source sector, regulatory status under NPDES program, or any combination thereof.

^b Atmospheric deposition of nitrogen to the watershed is not listed as a separate source sector because its loads and reductions are assumed within the land uses and source sectors where it is deposited in the watershed (forest, agriculture, urban/suburban). EPA is accountable for ensuring that these assumed

^c If requested, CBPO can provide assistance for dividing source sectors such as stormwater and agriculture among wasteload allocations (WLAs) and load allocations (LAs). In its September 11, 2008 letter to the Principals' Staff Committee, EPA stated that it will establish within the Bay TMDL individual

^d Blue indicates where CBPO will provide the States and the District with current loading numbers. If desired, CBPO could provide 2010 No Action, 1985, 2002, Tributary Strategy, and 2010 E3 loads and 2010 land use acres for each segment. CBPO could also provide initial interim and final targets if the

^e Yellow indicates numbers EPA expects within the Watershed Implementation Plan. EPA expects the entire column of values, including gray, to be in that year's two-year milestone, although it will only assess these milestone details by source sector or local scale if the basin/jurisdiction total is greater than

^f Loads for years after 2017 may be revised or refined based on the submission of Phase III Watershed Implementation Plans in 2017.
