November 9, 2016

Mr. James Rebarchak Regional Air Quality Program Manager Southeast Regional Office Pennsylvania Department of Environmental Protection 2 East Main Street Norristown, PA, 19401-4915

#### Re: Sunoco Partners Marketing and Terminals L.P. Marcus Hook Industrial Complex Title V Operating Permit 23-00119 Updated RACT II Proposal

Dear Mr. Rebarchak:

Based on comments received from the Pennsylvania Department of Environmental Protection (PADEP), Sunoco Partners Marketing and Terminals, L.P. (SPMT) submits the attached updated RACT II Proposal to PADEP for the Marcus Hook industrial complex (MHIC) located in Marcus Hook Borough, Delaware County, PA. The RACT II proposal addresses sources of nitrogen oxides (NOx) and volatile organic compounds (VOC).

This submittal revises the original RACT II proposal previously submitted and addresses emission information, a detailed NOx and VOC RACT analysis, cost-effectiveness calculations, and other supporting information. As part of this package, SPMT also submits a Title V Major Modification application to incorporate requirements from the recently promulgated requirements codified at 25 PA Code §§129.96 through §129.100 for major sources of NO<sub>x</sub> and VOC. Note that as part of the RACT proposal, SPMT plans to submit under separate cover, an updated CEMS monitoring plan for certain applicable sources to demonstrate compliance with the proposed NO<sub>x</sub> RACT II emission rates, in accordance with 25 PA Code §129.100.

Three copies of the updated SPMT RACT II submittal are attached, which include the following:

- SPMT RACT II Proposal;
- Copy of the completed General Information Form (GIF) in Attachment A;
- Copy of the Compliance History Review Form in Attachment B;
- Pennsylvania Department of Environmental Protection (PADEP) Title V Permit Application form in Attachment C;
- Title V Operating Permit Application Addendums in Attachment D;
- County and Municipal Notification letters are in Attachment E;
- A check in the amount of \$750.00 for the permit application fee per 25 Pa. Code § 127.704 is in Attachment F; and

• A Case-by-Case NO<sub>x</sub> RACT Cost Effectiveness Analysis in Attachment G.

If you have any questions, please contact me by telephone at (610) 859-1279 or via email at kwsmith@sunocologistics.com.

Sincerely,

Kevin W. Smith Specialist – Environmental Compliance

#### 1.0 INTRODUCTION

Sunoco Partners Marketing and Terminals, L.P. (SPMT) owns and operates the Marcus Hook Industrial Complex (MHIC). The Complex is located within the five-county Pennsylvania portion of the Philadelphia consolidated metropolitan statistical area (CMSA) classified as an ozone nonattainment area and emits greater than 50 tons per year (TPY) of volatile organic compounds (VOC) and 100 tons per year of oxides of nitrogen (NO<sub>x</sub>). Thus, the Complex is subject to updated reasonably available control technology (RACT II) requirements as promulgated in Pennsylvania Code, Title 25, Chapters 121 and 129. In accordance with the guidance provided by the US Environmental Protection Agency (USEPA), the Pennsylvania Department of Environmental Protection (PADEP) must provide an updated analysis for all sources subject to the 8-hour ozone National Ambient Air Quality Standard (NAAQS) promulgated in 2015. This RACT II analysis and compliance plan complies with the specific requirements listed in 25 PA Code §129.96 through §129.100.

This RACT II analysis provides a list of each source subject to the RACT requirements, identifying information, the RACT category (exempt, presumptive, or case-by-case) for each source, estimates of actual and potential NO<sub>x</sub> and VOC emissions, a RACT analysis, and testing, monitoring, recordkeeping and reporting procedures.

### 1.1 SITE DESCRIPTION

SPMT owns and operates the Marcus Hook Industrial Complex (MHIC) in Marcus Hook, Pennsylvania. The facility receives feedstocks such as natural gas, propane, ethane, and gasoline products by marine vessel, pipeline, truck and rail. These materials are then processed, if necessary, and stored onsite in various storage tanks or underground caverns.

The person responsible for daily operations is Edward G. Human, Director of Marcus Hook Operations.

### 1.2 NO<sub>X</sub> RACT ANALYSIS

The Pennsylvania RACT II rule includes provisions for exemptions, presumptive, and case-by-case RACT emission limitations. Combustion units and process heaters greater than 50 MMBtu/hr are subject to presumptive RACT emission limitations. Combustion units equal to or greater than 20 MMBtu/hr and less than 50 MMBtu/hr are subject to presumptive RACT II requirements. Boilers or combustion sources less than

20 MMBtu/hr and/or with a potential to emit less than 5 tons of NO<sub>x</sub> per year are subject to presumptive RACT II requirements. Sources with a potential to emit less than 1 ton per year (TPY) of NO<sub>x</sub> or that are subject to regulations specified in 25 PA Code §129.96(a) are exempt from RACT II.

**Section 3** provides a listing of each of the NO<sub>x</sub> sources applicable to case-by-case or presumptive RACT II requirements. If a source does not have or cannot meet the applicable presumptive requirements listed in 25 PA Code §129.97, then a case-by-case analysis must be conducted.

# 1.3 NO<sub>X</sub> RACT II ANALYSIS SUMMARY

**Table 1-1** presents a summary RACT II analysis for each source. The NO<sub>x</sub> RACT II Summary presents the NO<sub>x</sub> RACT category, proposed NO<sub>x</sub> RACT II requirements, and the proposed compliance demonstration.

# Table 1-1NOx RACT II Summary

Source ID	Source	NO <sub>x</sub> RACT Category	NO <sub>x</sub> RACT Proposed Requirements	Compliance Demonstration
31	Auxiliary Boiler 1	Case-by-Case	Case-by-Case analysis performed. Technically feasible	
33	Auxiliary Boiler 3	Case-by-Case	controls were determined to not be cost effective.	In accordance with Chapter 139 Subchapter C and Pennsylvania Continuous Source
34	Auxiliary Boiler 4	Case-by-Case	Comply with existing NSPS Subpart Db and NESHAP Subpart DDDDD requirements and 0.05 lb NO <sub>x</sub> /MMBtu emission rate.	Monitoring Manual (Rev 8), maintain records of CEMS reading and NO <sub>x</sub> emission calculations.
113	(6) Diesel Engine Pumps	Presumptive	Operate according to manufacturer specifications and good operating practices (§129.97(c)(8)).	Maintain records according to §129.100(d).

# 1.4 VOC RACT ANALYSIS

The VOC potential to emit is based on permitted fuel firing rates, USEPA AP-42 emission factors, and current permitted emission rates. The actual VOC emissions were calculated using historical firing rates or material throughputs and the applicable emission factor. The emissions calculations are described in more detail in **Section 2.3**.

The Pennsylvania RACT II rule includes provisions for exemptions, presumptive, and case-by-case VOC RACT emission limitations. Sources with a potential to emit greater than or equal to 1 and less than 2.7 tons of VOC per year are subject to presumptive RACT II requirements. Sources with a potential to emit less than 1 TPY of VOC are exempt from RACT II.

**Section 4** provides a listing of each of the VOC sources applicable to case-by-case or presumptive RACT II requirements. If a source does not have or cannot meet the applicable presumptive requirements listed in 25 PA Code §129.97, then a case-by-case analysis must be conducted.

### 1.5 VOC RACT ANALYSIS SUMMARY

**Table 1-2** presents a summary RACT II analysis for each source. It presents the VOC RACT category, proposed VOC RACT requirement, and proposed compliance demonstration.

# Table 1-2VOC RACT II Summary

Source ID	Source	VOC RACT Category	VOC RACT Proposed Requirements	Compliance Demonstration
31	Auxiliary Boiler 1	Presumptive	Meets 25 PA Code §129.97(d). Will continue	Maintain records of compliance with
33	Auxiliary Boiler 3	Presumptive	to comply with 0.004 lb VOC/MMBtu emission rate and existing NSPS Subpart Db and NESHAP	NESHAP Subpart DDDDD, NSPS Subpart Db, and emission rate
34	Auxiliary Boiler 4	Presumptive	Subpart DD and NESHIN Subpart DDDDD requirements.	limitation of 0.004 lb VOC/MMBtu.
T001	NSPS Kb Ext Float Tanks	Case-by-Case	NSPS Slippart K p	
T002	NSPS Kb Int Float Tanks	Case-by-Case	requirements for these tanks.	compliance with NSPS Subpart Kb.
T003	NESHAP Subpart R Tanks	Exempt	Subject to §129.56	
T004	NESHAP Subpart EEEE Tanks	Exempt	Subject to §129.65	Maintain records in accordance with
300	Miscellaneous Tanks	Exempt	Subject to §129.56	§129.100(d)
113	(6) Diesel Engine Pumps Exempt		PTE less than 1 TPY	Maintain records in accordance with §129.100(f)

Source ID	Source	VOC RACT Category	VOC RACT Proposed Requirements	Compliance Demonstration
115	Marine Vessel Loading	Case-by-Case	Case-by-Case analysis performed. Current control achieves highest control efficiency of all technically feasible control options. Continue to operate MVR system, use LDAR program, and follow §129.81and NESHAP Subpart Y requirements.	Maintain records required by the LDAR program, §129.81, and NESHAP Subpart Y. Continue to operate MVR system during gasoline and distillate loading.
116	Marine Vessel Ballasting	Case-by-Case	Case-by-Case analysis performed. Comply with existing §129.81 requirements and use clean ballast water.	Maintain records required by §129.81.
139	Cooling Towers	Presumptive/ Case-by-Case	15-6 and 17-1P are Presumptive RACT II units. Case-by-Case analysis performed for Tower 15- 2B only. No control options for source considered technically feasible. Continue to use equipment inspection and monitoring program to reduce VOC emissions.	Maintain records of the required equipment inspection and monitoring program.
367	Diesel Storage Tank	Case-by-Case	Comply with existing NSPS Subpart Kb requirements for these tanks.	Maintain records of compliance with NSPS Subpart Kb.
368	Vehicle Refueling (Gas/Diesel)	Case-by-Case	Comply with existing §129.61, §129.82, and NSPS Subpart Kb requirements.	Maintain records of compliance with §129.61, §129.82, and NSPS Subpart Kb.
701	Wastewater Treatment System	Exempt	PTE less than 1 TPY	Maintain records in accordance with §129.100(f)
402	Blind Changing	Case-by-Case	Case-by-Case analysis performed. Only feasible	Maintain records
800	NESHAP Fugitive Equipment	Case-by-Case	control option is LDAR. Existing NSPS Subpart VV	required by NSPS Subpart VV for these fugitive sources.
801	Fugitive Equipment	Case-by-Case	requirements proposed for RACT.	rugnive sources.

MVR = Marine Vapor Recovery; NESHAP = National Emission Standards for Hazardous Air Pollutants; NSPS = New Source Performance Standards; LDAR = leak detection and repair; MMBtu = Million British thermal units; PTE = potential to emit.

### 1.6 REPORT ORGANIZATION

The following sections provide a summary of the  $NO_x$  and VOC RACT analyses. Section 2 provides a physical description of each source subject to RACT as well as an estimate of potential and baseline emissions. The detailed  $NO_x$  and VOC RACT analysis for the Complex is contained in Section 3 and Section 4, respectively. Section 5 contains the proposed compliance demonstrations based on the RACT analysis. Additional relation information is provided in the attachments as follows:

- General Information Form (GIF) (Attachment A);
- Compliance History Review Form (Attachment B);
- Pennsylvania Department of Environmental Protection (PADEP) Title V Permit Application form (**Attachment C**);
- Title V Operating Permit Application Addendums (Attachment D);
- County and Municipal Notification letters (Attachment E);
- Permit Application F (Attachment F); and,
- Case-by-Case NO<sub>x</sub> RACT Cost Effectiveness Analysis (Attachment G).

#### 2.0 SOURCE IDENTIFICATION AND EMISSIONS INFORMATION

A listing and physical description of each affected  $NO_x$  and VOC sources located at the MHIC are provided in the sections below.

### 2.1 RACT SOURCES DETAIL

This section provides a listing and physical description of each RACT source. **Table 2-1** presents source specific information such as capacity, fuel/material, and source type. The potential and actual NO<sub>x</sub> and VOC emissions are shown in **Table 2-2** and **Table 2-3**, respectively.

# 2.2 ESTIMATE OF POTENTIAL AND ACTUAL NO<sub>X</sub> EMISSIONS

As required by 25 PA Code \$129.92(a)(4), **Table 2-2** provides the estimated potential and actual NO<sub>x</sub> emissions at the MHIC. The potential NO<sub>x</sub> and VOC emission estimates are based on permitted operating data, unit capacities, throughputs and emission factors derived from source testing and other accepted sources such as AP-42 emission factors. Baseline actual emissions are calculated based on historical operating data and the applicable emission factor. This section describes how the potential and actual NO<sub>x</sub> emissions were calculated for various sources.

The baseline actual NO<sub>x</sub> emissions from combustion sources such as industrial boilers presented in **Table 2-2** are based on the continuous emissions monitor (CEM) system which is used to monitor NO<sub>x</sub> and other emissions from the Auxiliary Boilers. The emissions from 2015 are reported as baseline emissions for these sources. The baseline emissions for the purposes of this submittal are defined as the actual emissions required to be reported under 25 PA Code §129.92(a)(4). The potential NO<sub>x</sub> emissions (TPY) are based on the current permitted potential emissions for each boiler, which is established in the current Title V Operating Permit (TVOP) 23-00119.

The potential NO<sub>x</sub> emissions from Source 113 – 6 Diesel Engine Pumps are based on the current permitted potential emissions for the source, which is established in the current TVOP 23-00119. The baseline emissions reported in **Table 2-2** are based on 2015 operating hours and manufacturer specifications.

6

#### 2.3 ESTIMATE OF POTENTIAL AND ACTUAL VOC EMISSIONS

As required by 25 PA Code §129.92(a)(4), **Tables 2-3** provides the estimated potential VOC emissions at the Complex. This section describes the methods used to calculate potential VOC emissions for the sources.

The baseline actual VOC emissions from combustion sources such as industrial boilers presented in **Table 2-3** are based on historical operating data and the permitted emission rate. The emissions from 2015 are reported as baseline emissions for these sources. The estimated potential to emit for VOC sources are based on the current permitted potential emissions for each boiler, which is established in the current TVOP 23-00119.

As stated in **Section 2.2**, the potential VOC emissions from Source 113 – 6 Diesel Engine Pumps are based on the current permitted potential emissions for the source, which is established in the current TVOP 23-00119. The baseline emissions reported in **Table 2-3** are based on 2015 operating hours and manufacturer specifications.

The VOC potential emissions from cooling towers (Source ID 139) presented in **Table 2-3** below is based on the current permitted potential emissions for the individual cooling towers. The baseline emissions are calculated using the 2015 cooling water throughput and the appropriate emission factor from AP-42 Chapter 5.1.

The VOC potential emissions from the wastewater treatment system are based on the current permitted potential VOC emissions in the current TVOP 23-00119.

### 3.0 NO<sub>X</sub> RACT ANALYSIS

Each  $NO_x$  emitting source was identified and evaluated for  $NO_x$  RACT. The  $NO_x$  RACT II analysis utilized the following steps:

- Identify the exempt NO<sub>x</sub> RACT II sources (Section 3.1);
- Identify the presumptive NO<sub>x</sub> RACT II sources (Section 3.2); and
- Identify the case-by-case NO<sub>x</sub> RACT II sources (Section 3.3).

#### 3.1 EXEMPT $NO_x$ RACT II SOURCES

25 PA Code §129.96 states that  $NO_x$  sources with a potential to emit less than 1 TPY, or sources with a requirement or emission restriction established in specific chapters of 129<sup>1</sup> are exempt from RACT requirements. There are no  $NO_x$  sources at the MHIC that are exempt from RACT requirements.

#### 3.2 PRESUMPTIVE NO<sub>x</sub> RACT II SOURCES

25 PA Code §129.97 sets presumptive requirements for various types and sizes of sources. An emergency standby engine operating less than 500 hours in a 12-month rolling period can comply with presumptive NO<sub>x</sub> RACT II requirements by operating and maintaining the source in accordance to manufacturer specifications and good operating practices (§129.97(c)(8)). Source 113, including six diesel engine pumps, are limited to 500 operating hours per year and therefore are presumptive sources for RACT II.

Table 3-1 presents a list of the presumptive sources at the Complex.

ERM

<sup>&</sup>lt;sup>1</sup> 25 PA Code §129.96 specifies that a source with a requirement or emission limitation established in §§129.51--129.52c, 129.54--129.69, 129.71--129.73, 129.75, 129.77, 129.101--129.107 and 129.301--129.310 are exempt from RACT requirements.

Source	Equipment	Permitted Capacity (HP)	Permitted Hours of Operation	Presumptive RACT Category	RACT Citation
	P-05A-06A	1250	499	Ct	
(6) Diesel	P-05A-06B	1250	499	Standby emergency engine operating < 500 hours/yr	§129.97(c)(8)
Engine	P-05A-04A	2250	499		
Pumps –	P-05A-04B	2250	499		
Source ID 113	P-05A-02A	1750	499		
	P-05A-02B	1750	499		

HP = Horsepower.

#### 3.3 CASE-BY-CASE NO<sub>x</sub> RACT II SOURCES

A case-by-case RACT analysis must be performed for NO<sub>x</sub> sources that are not classified as exempt nor Presumptive NO<sub>x</sub> RACT II sources. **Table 3-2** below presents a list of the case-by-case NO<sub>x</sub> sources at the Complex.

### Table 3-2Case-by-Case NOx RACT II Sources

Source ID	Source Name	NO <sub>x</sub> Emission Rate	Control Device	Case-by- Case RACT Category	RACT Citation
31	Auxiliary Boiler 1	0.05 lb/MMBtu	LNB & FGR	Combustion	
33	Auxiliary Boiler 3	0.05 lb/MMBtu	LNB & FGR	Source firing NG/Process	§129.99(a)
34	Auxiliary Boiler 4	0.05 lb/MMBtu	LNB & FGR	Gas	

NG = Natural Gas; MCF = thousand cubic feet; MMBtu = million British thermal units; LNB = Low NO<sub>x</sub> Burners; FGR = Flue Gas Recirculation.

# 3.4 AUXILIARY BOILERS – NO<sub>X</sub> RACT ANALYSIS

The three Auxiliary Boilers at the MHIC can fire natural gas or process gas. 25 PA Code §129.97(g)(1) provides the following presumptive RACT emission limitations for a combustion unit or process heater:

- For a natural gas-fired combustion unit or process heater with a rated heat input equal to or greater than 50 million Btu/hour, 0.10 lb NO<sub>x</sub>/million Btu heat input; and
- For a refinery gas-fired combustion unit or process heater with a rated heat input equal to or greater than 50 million Btu/hour, 0.25 lb NO<sub>x</sub>/million Btu heat input.

The Auxiliary Boilers, firing a mix of natural gas and process gas, do not fit with the source types described in \$129.97(g)(1). The Auxiliary Boilers are controlled with low NO<sub>x</sub> burners (LNB) and a flue gas recirculation (FGR) system, and have a NO<sub>x</sub> emission rate of 0.05 lb/MMBtu. This NO<sub>x</sub> emission rate is more stringent than the limitation specified in \$129.97(g) for combustion units firing natural gas or refinery gas.

The Auxiliary Boilers are also subject to the emission standards and work practice requirements outlined in 40 CFR Part 63 Subpart DDDDD "National Emission Standards for Hazardous Air Pollutants (NESHAP) for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters," as well as 40 CFR Part 60 Subpart Db "Standards of Performance for Industrial-Commercial-Institutional Steam Generating Units."

However, since there are technically feasible and available control options for the Auxiliary Boilers, SPMT conservatively elected to conduct a case-by-case evaluation of those options. As described in **Sections 3.4.1.1 to 3.4.1.3**, SPMT evaluated add-on control options for control of NO<sub>x</sub> associated with these sources. Potential reductions were evaluated based on the permitted potential-to-emit (PTE). The following sections provide an overview of the technologies available for control of NO<sub>x</sub> emissions for the Auxiliary Boilers located at the MHIC.

# 3.4.1 *Auxiliary Boilers – Available NO<sub>x</sub> Control Options*

An overview of the technologies available for control of  $NO_x$  emissions for the Auxiliary Boilers is provided in this section. The technologies selected for consideration are based on USEPA's ACT Documents for Utility Boilers (EPA-453/R-94-023), and include:

- Selective Non-Catalytic Reduction (SNCR);
- Flue Gas Recirculation (FGR);
- Low NO<sub>x</sub> Burners (LNB);
- Ultra-low NO<sub>x</sub> Burners (ULNB); and

• Selective Catalytic Reduction (SCR).

LNB and FGR are currently installed and operated on the Auxiliary Boilers. Therefore those control options have not been evaluated further.

#### 3.4.1.1 Selective Non-Catalytic Reduction

SNCR is a technology that relies on the chemical reduction of  $NO_x$  into molecular nitrogen and water vapor. A nitrogen reducing agent (reagent), such as ammonia or urea, is injected into the post combustion flue gas. The reduction reaction with  $NO_x$  is favored over other chemical reaction processes at temperatures ranging between 1600°F and 2100°F; therefore, it is considered a selective chemical process.

In the SNCR process, the combustion unit acts as the reaction chamber. The reagent is generally injected where the injection system can promote mixing of the reagent with the flue gas within the desired temperature range. Certain applications are more suited for SNCR due to combustion unit design. Units with furnace exit temperatures of  $1550^{\circ}$ F to  $1950^{\circ}$ F, residence times of greater than one second, and high levels of uncontrolled NO<sub>x</sub> are good candidates.

 $NO_x$  reduction levels using SNCR range from 30 to 50%<sup>2</sup>. This analysis assumes 30%  $NO_x$  reduction from application of SNCR alone due to non-ideal stack temperatures and the already reduced  $NO_x$  concentration in the boiler stacks due to existing controls.

### 3.4.1.2 *Ultra-low* NO<sub>x</sub> Burners

Burners have a dramatic effect on  $NO_x$  emissions since they affect the rate of initial heat release and the residence time at peak combustion temperatures by controlling the initial fuel/air mixing and the conditions in the primary ignition zone.

The basic principle behind lowering  $NO_x$  emissions is the staging of fuel and air supply to create at first a sub-stoichiometric combustion condition which reduces the formation of thermal  $NO_x$ . The burners control the combustion staging at and within the burner rather than in the firebox. This control is achieved through design features which regulate the aerodynamic distribution and mixing of the fuel and air.

 $<sup>^2</sup>$  Heater stack temperatures below 700°F results in low NO<sub>x</sub> removal efficiency (USEPA Air Pollution Control Technology Fact Sheet - EPA-452/F-03-031).

Both ULNB and LNB use staged air combustion to control NO<sub>x</sub> emissions and while both are technically feasible, ULNB technology is generally implemented more by the industry today because of availability of burners and desire to maximize benefit given the high cost associated with retrofits. This analysis assumed that new ULNB could achieve NO<sub>x</sub> emission rates of approximately 0.035 lb/MMBtu to reflect current technology capabilities for most combustion sources. Based on the current emission rate for the Auxiliary Boilers, the installation of new ULNB would result in a NO<sub>x</sub> reduction of 30%.

The effectiveness of the SNCR system would be significantly reduced when coupled with ULNB because of the relatively low level of NO<sub>x</sub> emissions generated by ULNB alone. As stated in USEPA's guidance<sup>3</sup>:

"Selective noncatalytic reduction efficiency is dependent on the NO<sub>x</sub> concentration in the flue gas. Therefore, it is expected that SNCR used on a heater with relatively high uncontrolled NO<sub>x</sub> emissions will have a higher reduction efficiency than an SNCR used on a heater with relatively low uncontrolled NO<sub>x</sub> emissions. This also indicates that for any particular heater the performance of SNCR used in combination with LNB may have a lower reduction efficiency than if SNCR was used alone."

Therefore, SPMT has not considered ULNB coupled with SNCR technically feasible.

### 3.4.1.3 Selective Catalytic Reduction

The SCR process chemically reduces  $NO_x$  into molecular nitrogen and water vapor. A nitrogen-based reagent such as ammonia or urea is injected into the ductwork, downstream of the combustion unit. The waste gas mixes with the reagent and enters a reactor module containing catalyst. The hot flue gas and reagent diffuse through the catalyst. The reagent reacts selectively with the  $NO_x$  within a specific temperature range and in the presence of the catalyst and oxygen. Optimum temperature range depends on the type of catalyst used and the flue gas composition but generally vary from 480°F and 800°F.

Temperature, the amount of reducing agent, injection grid design, and catalyst activity are the main factors that determine the actual removal efficiency. The use of catalyst results in two primary advantages of the SCR process over the SNCR: higher NO<sub>x</sub> control efficiency and reactions within a

<sup>&</sup>lt;sup>3</sup> USEPA's "Alternative Control Techniques (ACT) Document - NO<sub>x</sub> Emissions from Process Heaters (Revised)" – EPA-453/R-93-034, page 5-103.

lower and broader temperature range. The benefits are accompanied by a significant increase in capital and operating costs as the catalyst is comprised of active metals or ceramics. Another major disadvantage of SCR is the large amount of space required for the installation of new equipment.

 $NO_x$  reduction levels using SCR range generally from 70 to 90%. Since the currently installed controls currently achieve a low emissions rate, this analysis assumes a  $NO_x$  reduction to 0.02 lb/MMBtu from SCR alone (60% reduction). This analysis assumed that ULNB and SCR could be employed together to achieve the same reduction to 0.02 lb/MMBtu.

# 3.4.3 Auxiliary Boilers – Technical Feasibility

ULNB, SCR and a combination of ULNB and SCR are feasible  $NO_x$  controls for the Auxiliary Boilers. Although the exhaust temperature of the boiler is likely too low for SNCR to be effective, SPMT has conservatively considered it to be feasible as a  $NO_x$  control for the Auxiliary Boilers.

# 3.4.4 *Auxiliary Boilers – Ranking of NO<sub>x</sub> Control Options*

A ranking of the available and technically feasible control options by efficiency is presented below in **Table 3-3**:

Control Option	Control Efficiency
ULNB & SCR	60%
SCR	60%
SNCR	30%
ULNB	30%

# Table 3-3Auxiliary Boilers - Ranking of NOx Control Options

# 3.4.5 *Auxiliary Boilers – NO<sub>x</sub> RACT Economic Analysis*

SPMT conducted an economic analysis for the Auxiliary Boilers. The methodology used in performing this analysis follows the guidelines provided in 25 *PA Code* §§129.92(b)(3) and (b)(4).

- 1. To be conservative, SPMT evaluated the cost effectiveness using potential NO<sub>x</sub> emissions, which were previously defined as part of the emissions limitations set forth by the TVOP 23-00119.
- 2. Each control option was assigned a control efficiency for NO<sub>x</sub> removal. A single number was used, usually a mid-point in generally-accepted ranges of control efficiencies. The ranges of efficiencies were

determined from a collection of data obtained from previous experience, design analysis and most predominantly, from published literature.

- 3. For each control option, post-control emissions were calculated.
- 4. Cost effectiveness was calculated each control option using the methodology in the regulations and in the "OAQPS Control Cost Manual" (EPA/452/B-02-001). Total annual costs are the sum of operating and maintenance (O&M) costs and capital recovery costs. The capital recovery costs assume the equipment will be amortized over a 10 or 20-year<sup>4</sup> time frame at 10 percent interest, the rate SPMT uses for evaluating capital projects. Total capital required to implement the various control options and operating and maintenance costs were estimated using the *Alternative Control Techniques Document NO<sub>x</sub> Emissions from Utility Boilers EPA-453/R-94-023*, design analysis, and SPMT operating experience.
- 5. Capital and O&M Costs were scaled up to 2015 dollar amounts using *Chemical Engineering* cost indices.

Attachment G includes the economic analysis of each technology.

As shown in **Table 3-4** below, based on potential emissions, there were no additional  $NO_x$  controls that were found to be cost effective<sup>5</sup> for any of the affected case-by-case  $NO_x$  RACT sources.

### Table 3-4Auxiliary Boilers - NOx Control Cost Effectiveness

Cost Effectiveness (\$/ton reduced)			Control C	Option	
		ULNB	SNCR	SCR	ULNB & SCR
031, 033, 034	Auxiliary Boilers	\$52,331	\$12,126	\$25,106	\$51,271

SPMT proposes that the current emission limit of 0.05 lb  $NO_x/MMBtu$ , in association with the applicable NESHAP Subpart DDDDD and NSPS Subpart Db requirements, satisfy RACT for the Auxiliary Boilers. SPMT's

<sup>&</sup>lt;sup>4</sup> SCR/SNCR equipment is amortized on a 20-year time frame. All other controls are amortized on a 10-year time frame.

 $<sup>^{5}</sup>$  In a PADEP Responses to Frequently Asked Questions on the "Final Rulemaking additional RACT Requirements for Major Sources of NO<sub>x</sub> and VOC" response to question 41, DEP stated that, "The presumptive RACT benchmarks are \$2,800/ton NOx and \$5,500/ton VOC. The RACT II preamble notes that a 25% buffer to the cost-effectiveness will not change the presumptive RACT determinations. This increases the presumptive benchmarks to 3,500/ton NOx and \$7,000/ton VOC".

RACT II proposal for the Auxiliary Boilers is an emission rate of 0.05  $Ib NO_x/MMBtu$ , as outlined in TVOP 23-00119 Condition #001 for Sources 031, 033, and 034. SPMT will continue to operate and maintain the LNB and FGR systems in accordance with manufacturer specifications.

#### 4.0 VOC RACT II ANALYSIS

This section provides the detailed RACT analysis for affected VOC sources. The sources are identified as exempt, presumptive, or case-by-case. Sources that are not classified as either exempt or presumptive are subject to a case-by-case analysis.

### 4.1 EXEMPT VOC RACT II SOURCES

VOC sources with less a potential to emit less than 1 TPY are classified as exempt sources (25 PA Code §129.96(c)) and summarized in **Table 4-1**. **Table 4-2** summarizes VOC sources classified as exempt because they are regulated by another section in Chapter 129 as specified in 25 PA Code §129.96(a).

### Table 4-1Exempt VOC RACT II Sources < 1 TPY VOC</th>

Source ID	Source Name	Permitted Capacity	Potential VOC Emissions (TPY)	Exempt RACT Category	RACT Citation
113	(6) Diesel Engine Pumps	1250 <b>-</b> 2250 HP	0.91 for all 6 engines	VOC PTE < 1 TPY	§129.96(c)
701	Wastewater Treatment System	NA	0.9	VOC PTE < 1 TPY	§129.96(c)

### Table 4-2Exempt VOC RACT II Sources regulated by Chapter 129

Source ID	Source Name	Permitted Capacity	Regulated By	Exempt RACT Category	RACT Citation
300	Miscellaneous Tanks	Varies	§129.56		
T003	NESHAP Subpart R Tanks	Varies	§129.56 and NESHAP Subpart R	Regulated by other 129	§129.96(a)
T004	NESHAP Subpart EEEE Tanks	Varies	§129.65 and NESHAP Subpart EEEE	Section	

NESHAP = National Emission Standard for Hazardous Air Pollutants.

#### 4.2 PRESUMPTIVE VOC RACT II SOURCES

Presumptive VOC RACT II sources include VOC sources which have the potential to emit greater than or equal to 1 TPY, but less than 2.7 TPY. **Table 4-3** presents a list of the presumptive sources at the Complex.

Source ID	Source Name	Potential VOC Emissions (TPY)	Presumptive RACT Category	RACT Citation
31	Auxiliary Boiler 1		Combustion	
33	Auxiliary Boiler 3	5.49 (3 sources combined)	Source at a major VOC emitting	§129.97(d)
34	Auxiliary Boiler 4	,	facility.	
139	Cooling Towers	15-6: 1.47 17-1P: 2.21	PTE ≥ 1 and < 2.7 TPY	§129.97(c)(2)

#### Table 4-3Presumptive VOC RACT II Sources

Note that the third cooling tower in Source ID 139, Tower 15-2B, is a case-by-case VOC RACT source and is discussed further in **Section 4.7**.

#### 4.3 CASE-BY-CASE VOC RACT II SOURCES

A case-by-case RACT analysis must be performed for VOC sources that are not classified as exempt or Presumptive VOC RACT sources. **Table 4-4** presents a list of the case-by-case VOC sources at the Complex.

### Table 4-4Case-by-Case VOC RACT II Sources

Source ID	Source Name	Permitted Capacity	VOC PTE (TPY)	Regulated By

NESHAP = National Emission Standard for Hazardous Air Pollutants. NSPS = New Source Performance Standards.

### 4.4 STORAGE TANKS - VOC RACT ANALYSIS

SPMT operates various storage tanks at the MHIC to store petroleum liquids. Internal floating roof tanks (IFRT), external floating roof tanks (EFRT), and fixed roof tanks (FRT) are maintained and operated at the MHIC. TVOP 23-00119 groups the tanks into six separate sources:

- Source ID T001 NSPS Kb External Floating Tanks;
- Source ID T002 NSPS Kb Internal Floating Tanks;
- Source ID 367 Diesel Storage Tank;
- Source ID T003 NESHAP Subpart R Tanks;
- Source ID T004 NESHAP Subpart EEEE Tanks;
- Source ID 300 Miscellaneous tanks.

As discussed in **Section 4.1**, Source IDs T003, T004, and 300 are exempt from RACT II requirements since they are currently subject to §129.56, §129.65, and §129.56, respectively. All floating roof tanks, either external (T001) or internal (T002), are regulated by NSPS Subpart Kb "Standards Of Performance For Volatile Organic Liquid Storage Vessels (Including Petroleum Liquid Storage Vessels) For Which Construction, Reconstruction, Or Modification Commenced After July 23, 1984". Source ID 367, Diesel Storage Tank, is also subject to NSPS Subpart Kb.

The permit requirements from NSPS Subpart Kb are very similar to the requirements in 25 PA Code §129.56 and §129.57. A comparison of the various requirements is summarized in **Table 4-5** and **Table 4-6**.

25 PA Code §129.56	NSPS Equivalent Requirement
<ul> <li>Vapor pressure in the tank cannot exceed 15 psia under actual storage conditions, unless it is equipped with one of the following:</li> <li>1) External or internal floating roof (only if vapor pressure is &lt; 11 psia)</li> <li>2) Vapor recovery system</li> </ul>	NSPS Subpart Kb – §60.112(b)(a)
An external floating roof shall be fitted with a primary seal and a continuous secondary seal and comply with the following: - Seal closure shall not have no visible holes, tears or other openings in the seals or seal fabric. Seals must be intact and uniformly in place around the circumference of the floating roof. - Tanks with vapor-mounted primary seals, the accumulated area of gaps exceeding 1/8 inch in width between the secondary seal and the tank wall shall not exceed 1 square inch per foot of tank diameter.	NSPS Subpart Kb – §60.112b(a)(1) through (3)
<ul> <li>Openings in the external floating roof, except for automatic bleeder vents, rim space vents and leg sleeves must be :</li> <li>Equipped with covers, seals or lids in the closed position except when the openings are in actual use.</li> <li>Equipped with projections into the tank which remain below the liquid surface at all times.</li> <li>Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports.</li> <li>Rim vents are set to open when the roof is being floated off the leg supports or at the recommended setting of the manufacturer.</li> <li>Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers which cover at least 90% of the area of the opening.</li> </ul>	NSPS Subpart Kb – §60.112b(a)(1) through (3)

25 PA Code §129.56	NSPS Equivalent Requirement
<ul> <li>An internal floating roof shall have a primary seal and comply with the following:</li> <li>Equipped with covers, seals or lids in the closed position except when the openings are in actual use.</li> <li>Equipped with projections into the tank which remain below the liquid surface at all times.</li> <li>Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports.</li> <li>Rim vents are set to open when the roof is being floated off the leg supports or at the recommended setting of the manufacturer.</li> <li>Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers which cover at least 90% of the area of the opening.</li> </ul>	NSPS Subpart Kb – §60.112b(a)(1) through (3)
Perform annual inspections to ensure compliance with internal or external roof requirements. Repair any failure detected during an inspection within 45 days.	NSPS Subpart Kb - §60.113b(a)(4)
Maintain records of the liquid stored, maximum true vapor pressure, and inspection results	NSPS Subpart Kb - §60.115b

Table 4-6Comparison of 25 PA Code §129.57 Versus NSPS Subpart Kb Storage Tank<br/>Requirements

25 PA Code §129.57	NSPS Equivalent Requirement
The provisions of this section apply to above ground stationary storage tanks with a capacity equal to or greater than 2,000 gallons which contain volatile organic compounds with vapor pressure greater than 1.5 psia (10.5 kilopascals) under actual storage conditions.	NSPS Subpart Kb – §60.110b
Storage tanks covered under this section shall have pressure relief valves which are maintained in good operating condition and which are set to release at no less than .7 psig (4.8 kilopascals) of pressure or .3 psig (2.1 kilopascals) of vacuum or the highest possible pressure and vacuum in accordance with state or local fire codes or the National Fire Prevention Association guidelines or other national consensus standards acceptable to the Department.	NSPS Subpart Kb – §60.112b

25 PA Code §129.57	NSPS Equivalent Requirement
Section 129.56(g) (relating to storage tanks greater than 40,000 gallons capacity containing VOCs) applies to this section. Petroleum liquid storage vessels which are used to store produced crude oil and condensate prior to lease custody transfer shall be exempt from the requirements of this section.	NSPS Subpart Kb - §60.116b

External and internal floating roof tanks in Source ID T001 and T002 are subject to NSPS Subpart Kb. As summarized in **Table 4-5**, the NSPS Subpart Kb requirements are as stringent or more stringent than the requirements outlined in 25 PA Code §129.56 "Storage Tanks Greater Than 40,000 Gallons Capacity Containing VOCs". Note that 25 PA Code §129.96(a) outlines that sources with a requirement or emission limitation from various sections in 129, including §129.56, are exempt from RACT requirements.

Diesel Storage Tank (Source 367) is also subject to NSPS Subpart Kb. As summarized in **Table 4-6**, the NSPS Subpart Kb requirements are as stringent or more stringent than the requirements listed in 25 PA Code §129.57 "Storage Tanks Less Than Or Equal To 40,000 Gallons Capacity Containing VOCs". Note that 25 PA Code §129.96(a) outlines that sources with a requirement or emission limitation from various sections in 129, including §129.57, are exempt from RACT requirements.

SPMT proposes that compliance with the existing NSPS Subpart Kb satisfies RACT for the tanks in Source T001 – NSPS Kb External Floating Tanks, Source T002 – NSPS Kb Internal Floating Tanks, and Source 367 – Diesel Storage Tank.

# 4.5 MARINE VESSEL LOADING - VOC RACT ANALYSIS

Gasoline blending components and crude oil are loaded at the MHIC dock. Condition #014 for Source ID 115 - Marine vessel loading of the current TVOP 23-00119 states that SPMT "shall limit the loading of tank trucks, railcars, and marine vessels to tank trucks, railcars, and marine vessels whose collection systems are connected to the source's vapor collection system". All marine vessel loading is controlled by a marine vapor recovery (MVR) system which captures gases and directs them to the fuel gas system to be combusted as a fuel in the Auxiliary Boilers. If the gas cannot be sent to one of the Auxiliary Boilers, it is directed to the Ethylene Complex (EC) flare. The control efficiency of the MVR system is 98%.

The source is subject to leak detection and repair (LDAR) requirements, including an annual leak inspection. Marine Vessel loading is subject to 25

PA Code §129.81 requirements and NESHAP Subpart Y "National Emission Standards for Marine Tank Vessel Loading Operations".

However, since there are technically feasible and available control options for Marine Vessel Loading, SPMT conservatively elected to conduct a caseby-case evaluation of those options. As described in **Sections 4.5.1** through **4.5.3**, SPMT evaluated add-on control options. The following sections provide an overview of the technologies available for control of VOC emissions for the Marine Vessel loading at the MHIC.

### 4.5.1 Marine Vessel Loading – Available VOC Control Options

The sections below provide an overview of additional technologies available for controlling VOC emissions from loading operations at the MHIC. The technologies selected for consideration are listed below and are based on USEPA's *Air Pollution Control Cost Manual Sixth Edition* EPA/452/B-02-001 – January 2002, including:

- Thermal Incinerator;
- Condenser; and
- Adsorption.

### 4.5.1.1 Thermal Incinerator

Incineration, or thermal oxidation, is the process of oxidizing combustible materials by raising the temperature of the material above its auto-ignition point in the presence of oxygen, and maintaining it at high temperature for sufficient time to complete combustion to carbon dioxide and water. Most thermal units are designed to provide no more than 1 second of residence time to the waste gas with typical temperatures of 1,200 to 2,000°F.

VOC reduction levels using thermal incinerators range up to 98% and beyond.

### 4.5.1.2 Condenser

Condensation is a separation technique in which one or more volatile components of a vapor mixture are separated from the remaining vapors through saturation followed by a phase change. The phase change from gas to liquid can be achieved in two ways: (a) the system pressure can be increased at a given temperature, or (b) the temperature may be lowered at a constant pressure. In a two-component system where one of the components is non-condensable (e.g., air), condensation occurs at dew point (saturation) when the partial pressure of the volatile compound is equal to its vapor pressure. Refrigeration is often employed to obtain the low temperatures required for acceptable removal efficiencies. The basic equipment required for a refrigerated condenser system includes a VOC condenser, a refrigeration unit(s), and auxiliary equipment (e.g., precooler, recovery/storage tank, pump/blower, and piping).

VOC reduction levels using condensers range up to 90%.

### 4.5.1.3 Adsorption

Adsorption is a phenomenon where VOC gas molecules passing through a bed of solid particles (in this case activated carbon) are selectively held there by attractive forces which are weaker and less specific than those of chemical bonds. During adsorption, a VOC gas molecule migrates from the gas stream to the surface of the carbon where it is held by physical attraction. Most gases ("adsorbates") can be removed ("desorbed") from the carbon adsorbent by heating to a sufficiently high temperature, usually via steam or hot combustion gases, or by reducing the pressure to a sufficiently low value (vacuum desorption).

Fixed-bed adsorbers may be operated in either intermittent or continuous modes. In intermittent operation, the adsorber removes VOC for a specified time (the "adsorption time"), which corresponds to the time during which the controlled source is emitting VOC. After the adsorber and the source are shut down, the unit begins the desorption cycle during which the captured VOC is removed from the carbon. This cycle, in turn, consists of three steps: (1) regeneration of the carbon by heating, generally by blowing steam through the bed in the direction opposite to the gas flow; (2) drying of the bed, with compressed air or a fan; and (3) cooling the bed to its operating temperature via a fan.

VOC reduction levels using adsorption range from 95 to 98%<sup>6</sup>.

# 4.5.2 Marine Vessel Loading – Technical Feasibility

For the control of VOC loading vapors from marine vessel loading at the MHIC, a thermal incinerator, condenser, adsorption were found to be technically feasible.

<sup>&</sup>lt;sup>6</sup> US EPA Technical Bulletin, *Choosing An Adsorption System for VOC: Carbon, Zeolite, or Polymers,* EPA 456/F-99-004, May 1999.

### 4.5.3 Marine Vessel Loading – Ranking of VOC Control Options

**Table 4-7** provides a ranking of the remaining VOC control options for the Marine Vessel Loading at the MHIC. Note that **Table 4-7** also reflects the control efficiency of the current VOC control technology, the MVR system, described further in **Section 4.5**.

Table 4-7	Marine Vessel Loading - Ranking of VOC Control Optio	ns

<b>Control Option</b>	Control Efficiency
Existing MVR System	98%
Thermal Incinerator	98%
Adsorption	98%
Condenser	90%

SPMT identified the technically feasible control options for controlling VOC emissions from marine vessel loading. As shown in **Table 4-7**, there is no feasible control with a greater efficiency than the current control technology. Therefore, SPMT proposes that the existing MVR system satisfies RACT and did not conduct a cost-effectiveness analysis for the remaining feasible control options.

SPMT proposes that the existing §129.81 and NESHAP Subpart Y requirements, LDAR program, and continued operation of the existing MVR system during all marine vessel loading of any material satisfies RACT.

# 4.6 MARINE VESSEL BALLASTING - VOC RACT ANALYSIS

Marine vessel ballasting activities rarely occur at the MHIC. This activity is subject to requirements in 25 PA Code §129.81. SPMT only uses clean water, with insignificant VOC content.

SPMT proposes that the existing 25 PA Code §129.81 requirements and the use of clean water for ballasting satisfies RACT for Marine Vessel Ballasting at the MHIC.

# 4.7 COOLING TOWERS - VOC RACT ANALYSIS

As described in **Section 4.2**, two cooling towers (15-6 and 17-1P) are subject to presumptive RACT requirements based on their potential VOC emissions. The remaining 15-2B Cooling Tower in "Source 139 – Cooling Towers" has a

VOC potential to emit of 4.6 tons per year, and is therefore subject to a case-by-case analysis.

Emissions from cooling towers can occur due to leaks in facility heat exchangers, which allow VOCs to enter cooling water streams. These VOCs are volatilized from the cooling water as the water passes through the towers. There is no technically feasible add-on control option for the fugitive VOC emissions from the cooling towers. As required by the current TVOP 23-00119, SPMT uses an equipment inspection and monitoring program to minimize and repair exchanger leaks and reduce VOC emissions from the cooling towers.

SPMT proposes that the continued use of the equipment inspection and monitoring program satisfies VOC RACT for the 15-2B Cooling Tower.

### 4.8 VEHICLE REFUELING - VOC RACT ANALYSIS

Two above ground storage tanks at the Complex store gasoline and diesel to be dispensed to vehicles at the MHIC. Tank 367 (10,000 gal) stores diesel fuel and is subject to NSPS Subpart Kb requirements. As discussed in **Section 4.3.1**, the NSPS Subpart Kb requirements for Tank 367 are as stringent or more stringent than 25 PA Code §129.57 requirements. Tank 368 (12,000 gal capacity) stores gasoline and is subject to 25 PA Code §129.61 "Small gasoline storage tank control (Stage I control)" requirements. Sources subject to §129.61 are exempt from RACT requirements<sup>7</sup>. The gasoline dispenser is subject to 25 PA Code §129.82 "Control of VOCs form Gasoline Dispensing Facilities (Stage II)" requirements. This Stage II recovery system has a control efficiency of 90%.

SPMT proposes that the existing NSPS Subpart Kb, §129.61, and §129.82 requirements satisfy RACT for the vehicle refueling activities at MHIC.

### 4.9 FUGITIVES - VOC RACT ANALYSIS

At the MHIC, the following fugitive sources are subject to a case-by-case VOC RACT analysis:

- Blind Changing Source ID 402;
- NESHAP Fugitive Equipment Source ID 800; and

 $<sup>^7</sup>$  25 PA Code §129.96 states that sources subject to a requirement and/or emission limitations established in §§129.52 --129.52c, 129.54--129.69, 129.71--129.73, 129.75, 129.77, 129.101--129.107 and 129.301--129.310 are exempt from RACT II requirements.

• Fugitive Equipment – Source ID 801.

In the current facility permit, these fugitive sources are subject to leak detection and repair (LDAR) requirements as specified in TVOP 23-00119. SPMT is in the process of updating the current TVOP. In the new draft permit, Source ID 800 and Source ID 801 are consolidated into Source ID 801 "NSPS Subpart VV Fugitive Leaks". Source ID 800 is subject to the monitoring, testing, and recordkeeping requirements of NSPS Subpart VV "Standards of Performance for Equipment Leaks of VOC in the Synthetic Organic Chemicals Manufacturing Industry". In the updated TVOP, Source ID 402 – Blind Changing is also subject to the requirements of NSPS Subpart VV.

Fugitive emissions, by definition, are those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening. According to the *New Source Review Workshop Manual* (EPA 1990), it is "unreasonable to expect that relatively small quantities of VOC emissions, caused by leaking valves at outside storage tanks...could be captured and vented to a stack." Therefore, the only feasible control technology for fugitive emissions is LDAR. SPMT proposes that the NSPS Subpart VV requirements satisfy RACT for fugitive sources at the MHIC.

# 5.0 COMPLIANCE DEMONSTRATION

This section outlines the facility requirements to demonstrate compliance with 25 PA Code §129.100.

# 5.1 NO<sub>X</sub> RACT COMPLIANCE

**Section 5.1** details the compliance requirements for NO<sub>x</sub> RACT Sources at the MHIC.

5.1.1 *Exempt* NO<sub>x</sub> Sources

There are no exempt sources at the MHIC.

5.1.2 *Presumptive NO<sub>x</sub> Sources* 

**Table 3-1** presents a summary of the presumptive NO<sub>x</sub> RACT II sources. The Diesel Engine pumps, which are emergency engines limited to less than 500 hours per year, must operate in accordance with the manufacturer's specifications and with good operating practices. As required by 25 PA Code §129.100(d), SPMT will maintain records to demonstrate compliance with presumptive RACT requirements.

5.1.3 *Case-by-Case* NO<sub>x</sub> Sources

SPMT conducted a NO<sub>x</sub> RACT case-by-case analysis for three Auxiliary Boilers listed in **Table 3-2**. In **Section 3.4**, SPMT evaluated feasible NO<sub>x</sub> controls and concluded that no feasible controls were cost effective for controlling NO<sub>x</sub> emissions at the Auxiliary Boilers.

SPMT proposes that the emission limits in the current TVOP, existing NESHAP Subpart DDDDD requirements, and NSPS Subpart Db requirements satisfy RACT for the Auxiliary Boilers. SPMT shall meet an emission rate of 0.05 lb NO<sub>x</sub>/MMBtu for the Auxiliary Boilers, as outlined in TVOP 23-00119 Condition #001 for Sources 031, 033, and 034. NO<sub>x</sub> emissions from the Auxiliary Boilers are monitored using Continuous Emissions Monitoring Systems (CEMS). SPMT will continue to operate and maintain the LNB and FGR systems in accordance with manufacturer specifications.

SPMT will submit an updated CEMS monitoring plan to incorporate the new averaging period for the RACT emission limitation. SPMT will follow requirements from Chapter 139 Subchapter C and calculate the emission rate based on a 30 operating day rolling average, including start-ups, shutdowns, and malfunctions. SPMT will maintain records of CEMS reading and NO<sub>x</sub>

emission calculations to demonstrate compliance with the RACT II NO<sub>x</sub> emission limitation of 0.05 lb NO<sub>x</sub>/MMBtu on a 30 operating day rolling average in accordance with 25 PA Code Chapter 139, Subchapter C and *Pennsylvania Continuous Source Monitoring Manual*, Revision 8.

# 5.1.4 NO<sub>x</sub> RACT Compliance Summary

**Table 5-1** outlines the NO<sub>x</sub> RACT sources, NO<sub>x</sub> RACT category, RACT requirement, and RACT compliance demonstration.

# Table 5-1NOx RACT II Compliance Summary

Source ID	Source	NO <sub>x</sub> RACT Category	NO <sub>x</sub> RACT Proposed Requirements	Compliance Demonstration
31	Auxiliary Boiler 1	Case-by-Case	Case-by-Case analysis performed. Technically feasible	In a second an as with
33	Auxiliary Boiler 3	Case-by-Case	controls were determined to not be cost effective.	In accordance with Chapter 139 Subchapter C and Pennsylvania Continuous Source
34	Auxiliary Boiler 4	Case-by-Case	Comply with existing NSPS Subpart Db and NESHAP Subpart DDDDD requirements and 0.05 lb NO <sub>x</sub> /MMBtu emission rate.	Monitoring Manual (Rev 8), maintain records of CEMS reading and NO <sub>x</sub> emission calculations.
113	(6) Diesel Engine Pumps	Presumptive	Operate according to manufacturer specifications and good operating practices (§129.97(c)(8)).	Maintain records according to §129.100(d).

# 5.2 VOC RACT COMPLIANCE

**Section 5.2** details the various VOC RACT II sources (exempt, presumptive, or case-by-case) and the requirements for SPMT to demonstrate compliance with RACT.

# 5.2.1 Exempt VOC Sources

**Tables 4-1** and **Table 4-2** summarize the exempt VOC RACT II sources at the site. As required by 25 PA Code §129.100(f), SPMT will maintain records at the facility to demonstrate that the sources are exempt from additional RACT II requirements based on the exemption provisions provided in 25 PA Code §129.96.

# 5.2.2 Presumptive VOC Sources

**Table 4-3** shows the presumptive VOC RACT II sources. Sources matching specifications outlined in 25 PA Code §129.97(c) must operate in accordance with the manufacturer's specifications and with good operating practices. As required by 25 PA Code §129.100(d), SPMT will maintain records to demonstrate compliance with presumptive RACT requirements.

# 5.2.3 *Case-by-Case VOC Sources*

SPMT conducted a VOC RACT case-by-case analysis for the sources summarized in **Table 4-4**.

In **Table 4-5** and **Table 4-**6, SPMT compared the 25 PA Code §129.56 and §129.57 requirements to NSPS Subpart Kb requirements. The NSPS Subpart Kb requirements are as stringent or more stringent than the 25 PA code restrictions. According to §129.96(a), sources subject to an emission limitation or restriction from 25 PA Code §129.56 and §129.57 are exempt from RACT II requirements. SPMT proposes that compliance with the existing NSPS satisfy RACT for the tanks covered by Source T001 – NSPS Kb External Floating Tanks, Source T002 – NSPS Kb Internal Floating Tanks, and Source 367 – Diesel Storage Tank.

SPMT conducted a case-by-case analysis for Source 115 – Marine Vessel Loading in **Section 4.5**. The existing MVR system achieves the highest control efficiency of any identified control option. Therefore, SPMT proposes that the existing §129.81 and NESHAP Subpart Y requirements, LDAR program, and continued operation of the existing MVR system during all material loading satisfies RACT for Marine Vessel Loading (Source 115).

SPMT proposes that the existing 25 PA Code §129.81 requirements and the use of clean ballast water satisfy RACT for Marine Vessel Ballasting (Source 116) at the MHIC.

As discussed in **Section 4.7**, there are no technically feasible add-on control options for the VOC fugitive emissions at the cooling towers. SPMT proposes that the continued use of the equipment inspection and monitoring program satisfies VOC RACT for 15-2B cooling tower (Source 139).

SPMT proposes that the existing NSPS Subpart Kb, §129.61, and §129.82 requirements satisfy RACT for the Vehicle Refueling Activities (Source 368) at MHIC.

As discussed in **Section 4.9**, the only feasible control technology for fugitive emissions is LDAR. Therefore, SPMT proposes that NSPS Subpart VV

requirements satisfy RACT for fugitive sources at the MHIC, Source 402 – Blind Changing, Source 800 – NESHAP Fugitive equipment, Source 801 – Fugitive Equipment.

# 5.2.4 VOC RACT Summary

**Table 5-2** outlines the VOC RACT sources, VOC RACT category, RACT requirement, and RACT compliance demonstration.

# Table 5-2VOC RACT II Compliance Summary

Source ID	Source	VOC RACT Category	VOC RACT Proposed Requirements	Compliance Demonstration
31	Auxiliary Boiler 1	Presumptive	Meets 25 PA Code §129.97(d). Will continue to comply	Maintain records of compliance with
33	Auxiliary Boiler 3	Presumptive	with 0.004 lb VOC/MMBtu emission rate and	NESHAP Subpart DDDDD, NSPS Subpart Db, and
34	Auxiliary Boiler 4	Presumptive	existing NSPS Subpart Db and NESHAP Subpart DDDDD requirements.	emission rate limitation of 0.004 lb VOC/MMBtu.
T001	NSPS Kb Ext Float Tanks	Case-by-Case	Comply with existing NSPS Subpart Kb	Maintain record of compliance with NSPS
T002	NSPS Kb Int Float Tanks	Case-by-Case	requirements for these tanks.	Subpart Kb.
T003	NESHAP Subpart R Tanks	Exempt	Subject to §129.56	
T004	NESHAP Subpart EEEE Tanks	Exempt	Subject to §129.65	Maintain records in accordance with
300	Miscellaneous Tanks	Exempt	Subject to §129.56	§129.100(d)
113	(6) Diesel Engine Pumps	Exempt	PTE less than 1 TPY	Maintain records in accordance with §129.100(f)
115	Marine Vessel Loading	Case-by-Case	Case-by-Case analysis performed. Current control achieves highest control efficiency of all feasible control options. Continue to operate MVR system, use LDAR program, and follow §129.81and NESHAP Subpart Y requirements.	Maintain records required by the LDAR program, §129.81, and NESHAP Subpart Y. Continue to operate MVR system during gasoline and distillate loading.
116	Marine Vessel Ballasting	Case-by-Case	Case-by-Case analysis performed. Comply with existing §129.81 requirements and use clean ballast water.	Maintain records required by §129.81.

Source ID	Source	VOC RACT Category	VOC RACT Proposed Requirements	Compliance Demonstration
139	Cooling Towers	Presumptive/ Case-by-Case	15-6 and 17-1P are Presumptive RACT II units. Case-by-Case analysis performed for Tower 15-2B only. No technically feasible add-on control options for source. Continue to use equipment inspection and monitoring program to reduce VOC emissions.	Maintain records of the required equipment inspection and monitoring program.
367	Diesel Storage Tank	Case-by-Case	Comply with existing NSPS Subpart Kb requirements for these tanks.	Maintain records of compliance with NSPS Subpart Kb.
368	Vehicle Refueling (Gas/Diesel)	Case-by-Case	Comply with existing §129.61, §129.82, and NSPS Subpart Kb requirements.	Maintain records of compliance with §129.61, §129.82, and NSPS Subpart Kb.
701	Wastewater Treatment System	Exempt	PTE less than 1 TPY	Maintain records in accordance with §129.100(f)
402	Blind Changing	Case-by-Case	Case-by-Case analysis performed. Only feasible control is	Maintain records
800	NESHAP Fugitive Equipment	Case-by-Case	LDAR. Existing NSPS Subpart VV	required by NSPS Subpart VV for these fugitive sources.
801	Fugitive Equipment	Case-by-Case	requirements proposed for RACT.	Lugiuve bources.

#### **COORDINATION INFORMATION**

<u>Note</u>: The PA Historical and Museum Commission must be notified of proposed projects in accordance with DEP Technical Guidance Document 012-0700-001 and the accompanying Cultural Resource Notice Form.

**If the activity will be a mining project** (i.e., mining of coal or industrial minerals, coal refuse disposal and/or the operation of a coal or industrial minerals preparation/processing facility), respond to questions 1.0 through 2.5 below.

If the activity will not be a mining project, skip questions 1.0 through 2.5 and begin with question 3.0.

	<b>Ji j j i j j i j j i j j j j j j j j j j</b>			
1.0	<b>Is this a coal mining project?</b> If "Yes", respond to 1.1-1.6. If "No", skip to Question 2.0.	Yes	$\boxtimes$	No
1.1	Will this coal mining project involve coal preparation/ processing activities in which the total amount of coal prepared/processed will be equal to or greater than 200 tons/day?	Yes		No
1.2	Will this coal mining project involve coal preparation/ processing activities in which the total amount of coal prepared/processed will be greater than 50,000 tons/year?	Yes		No
1.3	Will this coal mining project involve coal preparation/ processing activities in which thermal coal dryers or pneumatic coal cleaners will be used?	Yes		No
1.4	For this coal mining project, will sewage treatment facilities be constructed and treated waste water discharged to surface waters?	Yes		No
1.5	Will this coal mining project involve the construction of a permanent impoundment meeting one or more of the following criteria: (1) a contributory drainage area exceeding 100 acres; (2) a depth of water measured by the upstream toe of the dam at maximum storage elevation exceeding 15 feet; (3) an impounding capacity at maximum storage elevation exceeding 50 acre-feet?	Yes		No
1.6	Will this coal mining project involve underground coal mining to be conducted within 500 feet of an oil or gas well?	Yes		No
2.0	<b>Is this a non-coal (industrial minerals) mining project?</b> If "Yes", respond to 2.1-2.6. If "No", skip to Question 3.0.	Yes	$\boxtimes$	No
2.1	Will this non-coal (industrial minerals) mining project involve the crushing and screening of non-coal minerals other than sand and gravel?	Yes		No
2.2	Will this non-coal (industrial minerals) mining project involve the crushing and/or screening of sand and gravel with the exception of wet sand and gravel operations (screening only) and dry sand and gravel operations with a capacity of less than 150 tons/hour of unconsolidated materials?	Yes		No
2.3	Will this non-coal (industrial minerals) mining project involve the construction, operation and/or modification of a portable non-metallic (i.e., non-coal) minerals processing plant under the authority of the General Permit for Portable Non-metallic Mineral Processing Plants (i.e., BAQ-PGPA/GP-3)?	Yes		No
2.4	For this non-coal (industrial minerals) mining project, will sewage treatment facilities be constructed and treated waste water discharged to surface waters?	Yes		No
2.5	Will this non-coal (industrial minerals) mining project involve the construction of a permanent impoundment meeting one or more of the following criteria: (1) a contributory drainage area exceeding 100 acres; (2) a depth of water measured by the upstream toe of the dam at maximum storage elevation exceeding 15 feet; (3) an impounding capacity at maximum storage elevation exceeding 50 acre-feet?	Yes		No

3.0	Will your project, activity, or authorization have anything to do with a well related to oil or gas production, have construction within 200 feet of, affect an oil or gas well, involve the waste from such a well, or string power lines above an oil or gas well? If "Yes", respond to 3.1-3.3. If "No", skip to Question 4.0.	Yes		No
3.1	Does the oil- or gas-related project involve any of the following: placement of fill, excavation within or placement of a structure, located in, along, across or projecting into a watercourse, floodway or body of water (including wetlands)?	Yes		No
3.2	Will the oil- or gas-related project involve discharge of industrial wastewater or stormwater to a dry swale, surface water, ground water or an existing sanitary sewer system or storm water system? If "Yes", discuss in <i>Project Description</i> .	Yes		No
3.3	Will the oil- or gas-related project involve the construction and operation of industrial waste treatment facilities?	Yes		No
4.0	<ul> <li>Will the project involve a construction activity that results in earth disturbance? If "Yes", specify the total disturbed acreage.</li> <li>4.0.1 Total Disturbed Acreage</li> </ul>	Yes	$\boxtimes$	No
5.0	<b>Does the project involve any of the following?</b> If "Yes", respond to 5.1-5.3. If "No", skip to Question 6.0.	Yes	$\boxtimes$	No
5.1	Water Obstruction and Encroachment Projects – Does the project involve any of the following: placement of fill, excavation within or placement of a structure, located in, along, across or projecting into a watercourse, floodway or body of water?	Yes		No
5.2	Wetland Impacts – Does the project involve any of the following: placement of fill, excavation within or placement of a structure, located in, along, across or projecting into a wetland?	Yes		No
5.3	Floodplain Projects by the commonwealth, a Political Subdivision of the commonwealth or a Public Utility – Does the project involve any of the following: placement of fill, excavation within or placement of a structure, located in, along, across or projecting into a floodplain?	Yes		No
6.0	Will the project involve discharge of stormwater or wastewater from an industrial activity to a dry swale, surface water, ground water or an existing sanitary sewer system or separate storm water system? Storm water is collected through existing storm inlets and conveyed to on-site pretreatment followed by DELCORA treatment facility.	Yes		No
7.0	Will the project involve the construction and operation of industrial waste treatment facilities?	Yes	$\boxtimes$	No
8.0	Will the project involve construction of sewage treatment facilities, sanitary sewers, or sewage pumping stations? If "Yes", indicate estimated proposed flow (gal/day). Also, discuss the sanitary sewer pipe sizes and the number of pumping stations/treatment facilities/name of downstream sewage facilities in the <i>Project Description</i> , where applicable.8.0.1Estimated Proposed Flow (gal/day)	Yes		No
9.0	Will the project involve the subdivision of land, or the generation of 800 gpd or more of sewage on an existing parcel of land or the generation of an additional 400 gpd of sewage on an already-developed parcel, or the generation of 800 gpd or more of industrial wastewater that would be discharged to an existing sanitary sewer system?	Yes		No
	9.0.1 Was Act 537 sewage facilities planning submitted and approved by DEP? If "Yes" attach the approval letter. Approval required prior to 105/NPDES approval.	Yes		No
10.0	Is this project for the beneficial use of biosolids for land application within Pennsylvania? If "Yes" indicate how much (i.e. gallons or dry tons per year).	Yes		No
	10.0.1Gallons Per Year (residential septage)10.0.2Dry Tons Per Year (biosolids)			

11.0	Does the project involve construction, modification or removal of a dam?		Yes	$\boxtimes$	No
	If "Yes", identify the dam.				
	11.0.1 Dam Name				
12.0	Will the project interfere with the flow from, or otherwise impact, a dam?		Yes	$\boxtimes$	No
	If "Yes", identify the dam.				
	12.0.1 Dam Name				
13.0	Will the project involve operations (excluding during the construction		Yes	$\boxtimes$	No
	period) that produce air emissions (i.e., NOX, VOC, etc.)? If "Yes", identify				
	each type of emission followed by the amount of that emission.				
	13.0.1 Enter all types & amounts				
	of emissions; separate				
	each set with semicolons.				
14.0	Does the project include the construction or modification of a drinking		Yes	$\boxtimes$	No
	water supply to serve 15 or more connections or 25 or more people, at	_			
	least 60 days out of the year? If "Yes", check all proposed sub-facilities.				
	14.0.1 Number of Persons Served				
	14.0.2 Number of Employee/Guests				
	14.0.3 Number of Connections				
	14.0.4 Sub-Fac: Distribution System		Yes		No
	14.0.5 Sub-Fac: Water Treatment Plant	H	Yes	H	No
	14.0.6 Sub-Fac: Source	H	Yes	H	No
	14.0.7 Sub-Fac: Pump Station	H	Yes	H	No
	14.0.8 Sub Fac: Transmission Main	H	Yes	H	No
	14.0.9 Sub-Fac: Storage Facility	H	Yes	H	N
15.0		$\exists$	Yes		No
15.0	Will your project include infiltration of storm water or waste water to		165		INC
	ground water within one-half mile of a public water supply well, spring or				
40.0	infiltration gallery?		Yes	$\boxtimes$	NL
16.0	Is your project to be served by an existing public water supply? If "Yes",		res	M	No
	indicate name of supplier and attach letter from supplier stating that it will				
	serve the project.				
	16.0.1 Supplier's Name			5-1	
	16.0.2 Letter of Approval from Supplier is Attached		Yes		No
17.0	Will this project involve a new or increased drinking water withdrawal		Yes	$\boxtimes$	No
	from a stream or other water body? If "Yes", should reference both Water				
	Supply and Watershed Management.				
	17.0.1 Stream Name				
18.0	Will the construction or operation of this project involve treatment,		Yes	$\boxtimes$	No
	storage, reuse, or disposal of waste? If "Yes", indicate what type (i.e.,				
	hazardous, municipal (including infectious & chemotherapeutic), residual) and				
	the amount to be treated, stored, re-used or disposed.				
	18.0.1 Type & Amount				
400	Will your project involve the removal of coal, minerals, etc. as part of any		Yes	$\boxtimes$	No
19.0					
19.0	earth disturbance activities?				
			Yes	$\boxtimes$	No
	earth disturbance activities?		Yes		N
	earth disturbance activities? Does your project involve installation of a field constructed underground		Yes		No
	earth disturbance activities? Does your project involve installation of a field constructed underground storage tank? If "Yes", list each Substance & its Capacity. <u>Note</u> : Applicant		Yes		No
	earth disturbance activities? Does your project involve installation of a field constructed underground storage tank? If "Yes", list each Substance & its Capacity. <u>Note</u> : Applicant may need a Storage Tank Site Specific Installation Permit.		Yes		No

#### 2700-PM-AQ0004 Rev. 6/2006

Compliance Background. (Note: Copies of specific documents, if applicable, must be made available to the Department upon its request.) List all documented conduct of violations or enforcement actions identified by the Department pursuant to the APCA, regulations, terms and conditions of an operating permit or plan approval or order by applicant or any related party, using the following format grouped by source and location in reverse chronological order. Attach additional sheets as necessary. See the definition of "documented conduct" for further clarification. Unless specifically directed by the Department, deviations which have been previously reported to the Department in writing, relating to monitoring and reporting, need not be reported.

Date	Location	Plan Approval/ Operating Permit#	Nature of Documented Conduct	Type of Department Action	Status: Litigation Existing/Continuing or Corrected/Date	Dollar Amount Penalty
07/27/02	No. 2 Tank Farm	23-00044	The VOC RACT fugitive emissions monitoring did not occur during the 2 <sup>nd</sup> qtr. Of 2002. Failure to monitor	NOV	Monitoring was performed for 2 <sup>nd</sup> qtr. 2002 and the Department was notified.	\$0
05/20/04	Ft. Mifflin Terminal	23-00037	Product discovered on roof of a tank, as well as open hatch	NOV	Corrected within 30 days.	\$0
03/06/06	Twin Oaks Terminal	23-00045	Failure to submit 05/01/05- 10/31/05 semiannual monitoring report	NOV	Confusion with reporting dates in new permit issued on 10/05/05 resulted in semiannual report being submitted late. Report was issued to the Department on 02/21/06.	\$0
03/06/06	Twin Oaks Terminal	23-00045	Failure to complete stack test in a timely manner.	NOV	New permit required stack test to be completed by 2/15/06. Stack test completed on 03/01/06.	\$0
06/12/07	Darby Creek Tank Farm	23-00011	Product on tank roofs, in oil/water boxes, around roof drain outlets, on ground below crude mixers, open vacuum breakers, open roof drain cover, absence of required records, absence of required seal gap notifications, lack of records of annual PRV checks.	NOV/CACP	Response to PADEP submitted on 6/29/07, challenging all findings of NOV and requesting NOV to be rescinded. Awaiting response. CACP issued May 2008. A review of the findings is pending.	\$37,730
03/01/07	Fort Mifflin Terminal	23-00037	Failure to submit semi- annual compliance certification/deviation report in a timely manner.	NOV	Response to PADEP, submitted on 4/4/07, requesting NOV to be rescinded. NOV issued before the due date of report. Awaiting response.	\$0
07/20/07	Fort Mifflin Terminal	23-00037	Observed seal gaps, observed torn seals, vapor pressure exceedances.	NOV/CACP	Response to PADEP submitted on 7/24/07, challenging all findings of NOV and requesting NOV to be rescinded. CACP issued May 2008. Entered into agreement to settle in order to avoid time and expense of challenging the findings.	\$2,700
07/20/07	No. 2 Tank Farm	23-00044	Failure to submit semiannual deviation report in a timely manner, absence of required records, absence of required seal gap notifications.	NOV/CACP	Response to PADEP submitted on 7/31/07, challenging two of three findings of NOV. CACP issued May 2008. Entered into agreement to settle in order to avoid time and expense of challenging the findings.	\$2,200

#### 2700-PM-AQ0004 Rev. 6/2006

10/02/07	Willow Grove Terminal	46-00091	Failure to obtain required approval prior to installing a control device and operating a source without a permit.	NOV/CACP	Response to PADEP in July 2008 agreeing to violations and penalty	\$5,000
10/28/09	Montello Terminal	06-05064B	Construction of a Vapor Recovery Unit prior to approval from the department	NOV	Response to PADEP submitted 11/03/09 explaining problems associated with obtaining plan approval. Plan approval issued 11/19/09.	\$1,500
02/09/11	Mechanicsburg Terminal	Plan Approval 21- 05029B	Failure to submit an administrative amendment application to roll plan approval conditions into operating permit at least 15 days prior to the end of the initial 180-day shakedown period	NOV	Administrative amendment submitted to Department 12/10/2010.	\$0
02/09/11	Montello Terminal	Plan Approval 06- 05064B	Failure to submit an administrative amendment application to roll plan approval conditions into operating permit at least 15 days prior to the end of the initial 180-day shakedown period	NOV	Administrative amendment submitted to Department 12/10/2010.	\$0
12/28/11	Willow Grove Terminal	46-0091	Failure to notify PADEP 30 days prior to conducting a stack test	NOV/FOV	Corrective Action submitted Jan 10,2012	\$1,300
8/12/13	Delmont Terminal	65-00354	Exceedances of tank 701 and 702 annual VOC limitation	NOV	Correspondence with PADEP to revise permit	\$0
5/2014	Belmont Terminal	PLID No: 01507	Failure to submit annual compliance certification to the Philadelphia Depart. Of Health	NOV/FOV	SXL submitted report but it was not recorded by the AMS.	\$1,500
3/24/15	Marcus Hook Industrial Complex	23-00119	Failure to submit an extension for a plan approval.	NOV/FOV	The plan approval extension request was submitted on February 26, 2015.	\$4,000
5/11/15	Twin Oaks Terminal	23-00045	PADEP issued an NOV for late submittal of a Permit Application.	NOV	The abatement plan was submitted on June 11, 2015.	\$0
05/26/15	Ft. Mifflin Terminal	23-00037	PADEP issued an NOV for late submittal of a permit application.	NOV	Received a letter from PADEP stating that the application was administratively complete. The abatement plan was submitted on June 11, 2015.	\$0
6/16/15	Marcus Hook Industrial Complex	23-00119	Failure to maintain permit required records regarding tank repair work	NOV	Corrective action submitted to PADEP July 9, 2015	\$0
8/20/15	Marcus Hook Industrial Complex	23-00119	Failure to maintain permit records regarding sample collection of process gas to analyze for sulfur, for failure to maintain Stage II Vapor Recovery Test Results and for exceeding NOX emissions during ozone season in 2013 and 2014.	NOV	Corrective Action submitted to PADEP September 16, 2015 and October 30, 2015.	
10/23/15	Malvern Terminal	15-00043	PADEP issued a NOV for not having records available at the time of an unannounced inspection.	NOV	The requested information was provided on November 11, 2015.	\$0
11/09/15	Marcus Hook #2 Tank Farm	23-00044	Failure to post a Title V public notice within the required time frame.	NOV	Corrective Action was submitted on 11/9/15. On 12/15 no further action is required.	\$0

#### 2700-PM-AQ0004 Rev. 6/2006

11/23/15	Marcus Hook #2 Tank Farm	23-00045	Operating without a valid permit for 9 days. Lost the permit shield during the permit renewal process because the public notice was not published within the required time period.	NOV	Talked with the PADEP on November 23, 2015 no action required.	\$0
06/07/16	MHIC	23-00119	Exceeded 12 month rolling emission limit for tanks 607, 611 and 23.	NOV	Submitted plan approval for increase in tank emissions.	

List all incidents of deviations of the APCA, regulations, terms and conditions of an operating permit or plan approval or order by applicant or any related party, using the following format grouped by source and location in reverse chronological order. This list must include items both currently known and unknown to the Department. Attach additional sheets as necessary. See the definition of "deviations" for further clarification.

Date	Location	Plan Approval/ Operating Permit#	Nature of Deviation	Incident Status: Litigation Existing/Continuing Or Corrected/Date
7/01/2014	Malvern Terminal	15-00043	VRU Daily Calibration Drift Check	7/02/2014
7/17/2014	Malvern Terminal	15-00043	VRU Daily Calibration Drift Check	7/19/2014
12/6/2014	Malvern	15-00043	VRU Daily Calibration Drift Check	12/7/2014
12/16/2014	Malvern Terminal	15-00043	VRU Daily Calibration Drift Check	12/18/2014
12/23/2014	Malvern Terminal	15-00043	VRU Daily Calibration Drift Check	1/02/2015

<u>CONTINUING OBLIGATION</u>. Applicant is under a continuing obligation to update this form using the Compliance Review Supplemental Form if any additional deviations occur between the date of submission and Department action on the application.

### VERIFICATION STATEMENT

Subject to the penalties of Title 18 Pa.C.S. Section 4904 and 35 P.S. Section 4009(b)(2), I verify under penalty of law that I am authorized to make this verification on behalf of the Applicant/Permittee. I further verify that the information contained in this Compliance Review Form is true and complete to the best of my belief formed after reasonable inquiry. I further verify that reasonable procedures are in place to ensure that "documented conduct" and "deviations" as defined in 25 Pa Code Section 121.1 are identified and included in the information set forth in this Compliance Review Form. Section 2 - Applicable Requirements for the Entire Site				
Describe and cite all applicable requirements pertaining to the entire site. Note: A Method of Compliance Worksheet (Addendum 1) must be completed for each requirement listed.				
For renewals, only list site level requirements not included in the current Title V Operating Permit. If there are no changes, check the box to the Operating Permit. right.				
Citation No.	Citation Limitation	Limitation Used		
25 PA Code §129.99	Based on RACT II analysis performed in accordance with 25 PA Code §129.99, no additional permit restrictions or requirements are required to meet RACT II requirements.	Sources will continue to meet emission restrictions and other requirements in the current Title V Permit.		

### Section 3 - Site Inventory

Give a complete list of all air pollution sources, control equipment, emission points, and fuel material locations within this site.

For renewals, only list sources not included in current Title V Operating Permit or sources which are now subject to Compliance Assurance Monitoring (CAM) requirements of 40 CFR Part 64. If preprinted information is provided, correct and/or add any new sources as necessary. Note: one (1) of the following sections (5, 6 or 7) of the application must be completed for each new source listed here.

Unit ID	Company Designation	Unit Type	CAM
031	Auxiliary Boiler 1	Combustion Unit	
033	Auxiliary Boiler 3	Combustion Unit

# 5.3 Exhaust System Components

Explain how the exhaust components are configured:

From Unit	Unit Description	To Unit	Unit Description	Percent Flow
031	Combustion Unit	C031	Control Device	100
C031	Control Device	S031	Point of Air Emission	100

5.4 Source Classification Code (SCC) Listing for Standard Operation					
Fuel/Material	Associated SCC	Max Throughput Rate	Firing Sequence		
Natural Gas/Process Gas	1-02-006-01	392.50 MCF/hr			

#### 5.5 Maximum Fuel Physical Characteristics

If taking limitations on Fuel Physical Characteristics, see instructions.

SCC/Fuel Burned	FML*	% Sulfur	% Ash	BTU Content (Units)

\*FML = Fuel Material Location

#### 5.6 Limitations on Source Operation

Complete this section if you are requesting a limitation on operational hours and/or a permit limitation on the throughput rate equal to or lower than that stated in Section 5.1 of the application.

Maximum amount of hours of source operation per year:

Fuel/SCC	Hours/Day	Days/Week	Days/Year	Hours/Year	Max Thruput	Units/Time

#### 5.7 Source Applicable Requirements

Describe and cite all applicable requirements pertaining to this source.

Note: A Method of Compliance Worksheet (Addendum 1) must be completed for each requirement listed.

For renewals, only list source level requirements not included in the current Title V Operating Permit. If there are no changes, check the box to the right.

No changes from current Title V Operating Permit.

Section	on 11 - Compliance Plan for the Facility			
		Yes	Νο	
11.1	Will your facility be in compliance with all applicable requirements at the time of permit issuance and continue to comply with these requirements during the permit duration?			
11.2	Will your facility be in compliance with all applicable requirements presently scheduled to take effect during the term of the permit?	$\boxtimes$		
11.3	Will these requirements be met by the regulatory required dates?	$\boxtimes$		
	If you checked "No" in Part 11.1, 11.2 or 11.3, answer the following questions:			

11.4 Identify applicable requirement(s) for which compliance is not or will not be achieved:

Source ID No.	Citation No.

11.4.1 Briefly describe how compliance with this/these applicable requirement(s) will be achieved:

11.4.2. Provide a detailed schedule of compliance for the noncomplying sources or activities identified in this section of the application. Include an enforceable sequence of corrective actions with milestone and projected compliance dates.

Date	Action/Milestone

11.4.3. Indicate the submittal frequency for the progress report (s):

11.4.4. Starting date for the submittal of the progress report(s):

Sec	Section 12 – Alternative Operating Scenario (optional) – Not Applicable							
Dupl	icate t	this section for each source participated in this all	terna	ative scenario.				
12.1	Gen	General Information						
a.	Alter	native Operating Scenario Name or ID No.:						
b.	Sour	ce ID No.:	c.	Source Name:				
d.	Sour	ce Type (check one):		Incinerator	Process			
e.	Give	a brief description of this alternative scenario sta	ating	how it is different fro	om the standard operation:			
	•	ational Flexibility Request						
Cheo	ck all t	hat apply.						
		Alternative exhaust system component configu	ratio	n				
		If this box is checked, complete Sections 12.3 and 12.7

### FedEx Tracking Number: 8070 5489 1518

November 8, 2016

Gene Taylor President Borough Council Borough of Marcus Hook 10th and Green Street Marcus Hook, Pennsylvania, U.S. 19061

### **RE:** Sunoco Partners Marketing & Terminals L.P. – Marcus Hook Municipal Notification

Dear Mr. Taylor:

In accordance with the Commonwealth of Pennsylvania's Administrative Code, Section 1905-A, please be advised that Sunoco Partners Marketing & Terminals, L.P., located in the Borough of Marcus Hook, Delaware County, Pennsylvania, submitted a Title V Major Modification application in order to comply with the recently promulgated requirements codified at 25 PA Code §§129.96 through §129.100 for major sources of nitrogen oxides (NOx) and volatile organic compounds (VOC).

A thirty (30) day comment period begins upon your receipt of this notice. Any comments should be forwarded to:

Pennsylvania Department of Environmental Protection Southeast Regional Office (Air Quality) 2 East Main St. Norristown, PA 19401 (484) 250-5920

A copy of this letter and verification of receipt will be forwarded to the Department with the permit application.

Please contact me at (610) 859-1279 if you require any additional information on this matter.

Kevin W. Smith Specialist – Environmental Compliance

Attachment F Permit Application Fee *Attachment G Case-by-Case NO<sub>x</sub> RACT Cost Effectiveness Analysis* 

Assumptions for all equipment:

Number of Years (n)	10
Number of Years (n) - SCR/SNCR	20
Interest Rate, % (i)	10
Annualized Cost Factor (ACF)	0.163

$$ACF = \frac{i(1+i)^n}{(1+i)^n - 1}$$

EPA Air Pollution Control Cost Manual, Sixth Edition, EPA/452/B-02-001 - Equation 2.8a

Year	Chemical Engineering Cost Index
1982	314
1986	318.4
1988	342.5
1990	357.6
1991	361
1994	368.1
1998	389.5
1999	390.6
2000	394.1
2002	395.6
2013	567.3
2014	576.1
2015	556.8
Cost Escalation Factor for LNB, SNCR, and SCR <sup>1</sup>	1.51

<sup>1</sup> Cost data from Alternative Control Techniques Document - NOx Emissions from Utility Boilers - EPA-453/R-94-023 scaled from 1994 to 2015 costs using the Cost Escalation Factor.

Source		Boiler Control Efficiency	Comment
Ultra-low NO <sub>x</sub> burners and Selective Catalytic Reduction	ULNB & SCR	96%	Combining both removal efficiencies of ULNB and SCR (0.02 lb/MMBtu).
Selective Catalytic Reduction	SCR	85%	Based on past engineering experience (0.02 lb/MMBtu).
Ultra-low NO <sub>x</sub> burners	ULNB	50% to 86%	Based on vendor experience at 0.035 lb/MMBtu.
Selective Non-Catalytic Reduction	SNCR	40.0/	Heater stack temperatures below 700°F results in low NO <sub>x</sub> removal efficiency. EPA Air Pollution Control Technology Fact Sheet - EPA-452/F-03-031.

#### SPMT RACT II Proposal Auxiliary Boiler RACT Cost Effectiveness Summary

_	А	В	С	D	Е	F	G	Н	Ι	J
Control Option	Potential Firing Rates (MMBtu/hr)	Current Emission Rate (lb/MMBtu)	Potential Emissions (TPY)	Control Efficiency <sup>2</sup> (%)	Maximum Post Control Emissions (TPY)	Potential NO <sub>x</sub> Reduced (TPY)	2015 Total Capital Cost (\$)	2015 O&M Cost (\$)	2015 Annualized Cost <sup>1</sup> (\$)	2015 Cost Effectiveness (\$/Ton)
ULNB & SCR	392.5	0.05	86.0	60%	34.4	51.6	15,115,132	547,646	2,644,292	51,271
SCR	392.5	0.05	86.0	60%	34.4	51.6	8,021,767	352,578	1,294,812	25,106
SNCR	392.5	0.05	86.0	30%	60.2	25.8	2,141,154	61,191	312,690	12,126
ULNB	392.5	0.05	86.0	30%	60.2	25.8	7,093,366	195,068	1,349,480	52,331
	Calculation		= A * B * 8760 / 2000		= C * (1 - D)	= C - E			= (G * ACF) + H	= I / F

Technical Infeasibilities:

LNB and FGR are currently implemented at the auxiliary boilers and therefore were not evaluated in this cost analysis.

The exhaust temperature of the auxiliary boiler is likely too low for SNCR to be an efficient control. However, to be conservative, SPMT evaluated the cost effectiveness of SNCR.

Notes:

<sup>1</sup> See "RACT Cost Summary" tab for details on the Annualized Cost Factor (ACF). <sup>2</sup> Control efficiency for SCR and ULNB & SCR were based on a minimum 0.02 lb/MMBtu emission rate. Further reductions in the emissions rate have not been demonstrated for retrofit applications and therefore were not evaluated.
