42 Acres

To eliminate public health and safety hazards located on abandoned mine land (AML) and in close proximity to high foot traffic areas.

The Bradenville project involved eliminating a subsidence prone area covering approximately 42 acres. The area experienced 14 recorded subsidence events that have since been reclaimed. Exploratory drilling in 2012 concluded the area had a high subsidence potential and warranted an area-wide stabilization project. Approximately 45,000 to 65,000 cubic yards of flowable concrete were injected through 725 drilled holes and into the mine voids to stabilize the overburden. The dangerous abandoned mine feature, located within Problem Area 0207 (PA 0207) and referenced on the Derry 7.5 Minute USGS Quadrangle Map, is a direct result of the Derry No. 1 abandoned deep mine that
operated in this vicinity in the 1920s and ceased operation prior to the 1950s. The project reclaimed a hazard that met the Office of Surface Mining Reclamation and Enforcement’s (OSMRE) Priority 2 safety criteria.
