

Report Instructions for *Oil and Gas Operator Well Inventory Report*

1. Overview of Reports

The Oil and Gas Operator Well Inventory Report is designed to show all Oil & Gas Drilling Permits that have been issued for Oil and/or Gas wells in the State of Pennsylvania. This report will only include those permits issued that are within the search functions selected when the report is run. This report is not intended to indicate the current status of the well that was permitted, just simply that a permit was issued to drill or re-enter the well bore.

2. Search Function

OGO

Used for selecting an Oil and Gas Well Operator by using the assigned OGO number.

OPERATOR

Used for selecting All Operators, by name, or one (1) Operator Name for which permits have been issued.

REGION

Used for selecting a particular DEP Region in which the facility being permitted is located.

COUNTY

Used for selecting All Counties or one (1) County to be included on the report. When selecting one (1) County, the program will load only those municipalities that are within that county in the Municipality selection dropdown list. (Please wait as this may take a few minutes).

MUNICIPALITY

Used for selecting All Municipalities or one (1) Municipality to be included on the report. Selecting one (1) Municipality without selecting one (1) County, will show all permits issued in that particular municipality for all counties where that municipality name exists. Municipality name may be a town/city, a township name or a borough name.

UNCONVENTIONAL ONLY

Used for selecting whether the report will include all wells (Unconventional Only = NO) or include only those wells identified as an Unconventional well (Unconventional Well Only = Yes).

WELL STATUS

Use to select the well statues that will be included in the report.

CONFIGURATION

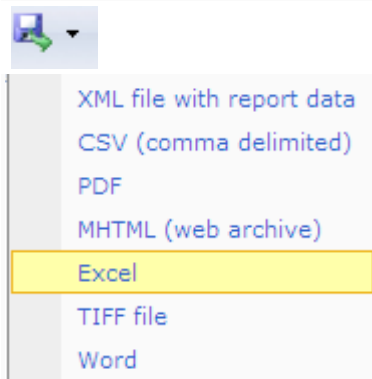

Use to select the well configuration that will be included in the report.

3. Report Controls

Used for paging from report page to report page.

Used to set the size of the report displayed.

Used to search the report for specific information.

A dropdown menu with a printer icon and a downward arrow. The menu items are: XML file with report data, CSV (comma delimited), PDF, MHTML (web archive), Excel (highlighted in yellow), TIFF file, and Word.

Used to select the file type of the report download.

Used to refresh the report based on the earlier selected parameters.

Used to print the current report to your local selected printer.

4. Report Acronyms	
Acronym or Term	Definition
Well Operator or Operator	The person designated as the well operator or operator on the permit application or well registration. Where a permit or registration was not issued, the term shall mean any person who locates, drills, operates, alters or plugs any well or reconditions any well with the purpose of production there from.
Well	A bore hole drilled or being drilled for the purpose of or to be used for producing, extracting or injecting any gas, petroleum or other liquid related to oil or gas production or storage, including brine disposal, but excluding bore holes drilled to produce potable water to be used as such. The term "well" does not include a bore hole drilled or being drilled for the purpose of or to be used for systems of monitoring, producing or extracting gas from solid waste disposal facilities, as long as the wells are subject to the act of July 7, 1980 (P.L. 380, No. 97), known as the Solid Waste Management Act, and do not penetrate a workable coal seam. The term also does not include a borehole drilled or being drilled for the purpose of or to be used for degasifying coal seams if the following conditions are satisfied: (1) (A) the bore hole is used to vent methane to the outside atmosphere from an operating coal mine; and (B) the bore hole is regulated as part of the mining permit pursuant to the act of June 22, 1937 (P.L. 1987, No. 394), known as The Clean Streams Law, and the act of May 31, 1945 (P.L. 1198, No. 418), known as the Surface Mining Conservation and Reclamation Act; and (C) the bore hole is drilled by the operator of the operating coal mine for the purpose of increased safety; or (2) the bore hole is used to vent methane to the outside atmosphere pursuant to a State or Federal funded abandoned mine reclamation project.
Oil	Hydrocarbons in liquid form at standard temperature of 60 Degrees Fahrenheit and pressure 14.7 PSIA.
Gas	Any fluid, either combustible or noncombustible, which is produced in a natural state from the earth and which

	maintains a gaseous or rarified state at standard temperature of 60 degrees Fahrenheit and pressure 14.7 PSIA, any manufactured gas, any byproduct gas or any mixture of gases.
Drilling	The drilling or re-drilling of any well or the deepening of any existing well.
Unconventional Well	An unconventional gas well is a well that is drilled into an unconventional formation, which is defined as a geologic shale formation below the base of the Elk Sandstone or its geologic equivalent where natural gas generally cannot be produced except by horizontal or vertical well bores stimulated by hydraulic fracturing.
