

Hello Citizens Advisory Committee,

Thanks for the opportunity to testify last month.

Today, I am filing a complaint with the Citizens Advisory Committee against the Climate Change Advisory Committee (CCAC). I have publicly testified at 3 of the last 4 Climate Change Advisory Committee meetings. All my testimonies were each 2-3 pages in length, but the CCAC staff and Committee paraphrased my public testimony to only 1 to 3 sentences not capturing the true meaning of my 3 total testimonies. In each of my testimonies, I presented science-based research studies led by Penn State and Stanford on climate science which was left out of their summaries. The CCAC is intentionally altering my public testimony. Staff and Leadership on the Climate Change Advisory Committee are misleading and misrepresenting my actual public testimony intentionally from being truthfully transcribed and properly summarized.

The CCAC and the executive Staff are violating Pennsylvania law by altering and distorting my testimonies to negate the key issues regarding climate science research led by Penn State and Stanford research from being fully recorded to the public record. Attached are my 3 testimonies from August 20, 2024, October 22, 2024, and February 18, 2025, along with the CCAC Meeting Minutes of these same meetings. Under PA Law, it is illegal to eliminate public comments from being recorded on public record just because the Agency does not agree with what the commenter is saying. I want to thank this Citizens Advisory Committee (CAC) for fully publishing my testimony last month. As this Advisory Committee is for the Citizens, I would appreciate Bob Barkanic, Chairman to communicate to the Climate Change Advisory Committee Leadership and ensure my testimonies get printed word for word like they are by this Citizens Advisory Committee.

That concludes my testimony for today.

-Nathan Eachus
