Analytical Report For Environmental Cleanup

Name of Sample Collector: Dennis J Low

Date Received: 06/10/2021

County: York State:

Municipality: Newberry Twp

NEWBERRY TWP PFC

Sample Medium: Ground Water

Sample Medium Type: Water

Location: 621 Wyndamere Road, Etters, PA

Reason: Routine Sampling
Project: NOT INDICATED

Suite: PFAS2
Matrix: Water

Field Tests					
рН	6.50	pH units			
Temperature	14.65	С			
Specific Conductance	675	umhos/cm			

Stream Condition:

Analytical Report For Environmental Cleanup

Sample Comment: Split sample with ACV (Cycle Chem) for PFAS as part of Newberry Twp PFC study

Appearance: Clear

Test Code	s / CAS # - Description	Reported Results	Date And Time Analyzed	Approved by	Test Method

The results of the analyses provided in this laboratory report relate only to the sample(s) identified therein. Unless otherwise noted, the results presented on this laboratory report meet all requirements of the 2016 TNI standard. Sample was in acceptable condition when received by the Laboratory. Any exceptions are noted in the report.

U - Indicates analysis was performed for the test but it was not detected. The sample quantitation limit is reported.

J - Indicates an estimated value, reported between Reporting Limit (RL) and Minimum Detection Limit (MDL).

Dr. Pamela Higgins, Technical Director, Bureau of Laboratories

^{*} denotes tests that the laboratory is not accredited for

Analytical Report For Environmental Cleanup

ORGANICS LABORATORY QUALIFIERS

- U Indicates analysis was performed for the test but it was not detected. The sample quantitation limit is reported.
- J Indicates an estimated value, reported between Reporting Limit (RL) and Minimum Detection Limit (MDL).
- N Indicates presumptive evidence of a compound.
- B This flag is used when the analyte is found in the associated blank as well as in the sample.
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- P This flag is used with a target analyte when there is greater than a 40% difference between the results obtained from the primary and confirmation columns for dual column analysis methods (e.g. pesticides, triazines, PCBs, etc)
- Q This flag identifies the average of multiple results from multiple analyses, or the average of the averages of dual column analysis methods.
- X Non-target analytes co-elute with compound. Identification unable to be confirmed.
