## SECTION F. EROSION AND SEDIMENT CONTROL (E&S) PLAN See the attached Instructions for additional guidance with E&S Plans

Erosion and Sediment Control Plan BMPs should be designed to minimize accelerated erosion and sedimentation through limiting the extent and duration of earth disturbance, protection of existing drainage and vegetation, limiting soil compaction and controlling the generation of increased runoff. The Department recommends the use of the *Pennsylvania Erosion & Sedimentation Pollution Control Program Manual (E&S Manual)* (363-2134-008) to achieve this goal. The E&S Plan must meet the requirements of Pa. Code § 102.4(b) and submitted with the NOI. Also, see section 2. of the NOI instruction for detailed information on completing the E&S plan and additional requirements.

det	ailed information on completing the E&S plan and additional requirements.
a.	E&S Plan Summary
	Provide a summary of proposed E&S BMPs and their performance to manage E&S for the project.
	The following measures are aimed at controlling accelerated erosion and sedimentation during construction. Temporary erosion and sediment control will be accomplished by utilizing Best Management Practices, such as Compost Filter Sock and Inlet Protection. The extent and duration of earth disturbance is to be minimized to limit impacts of erosion and sedimentation to neighboring and downstream properties.
b.	E&S Plan BMP Design
	Check those that apply:
	☐ E&S Plan is designed using an alternative BMP or design standard approved by DEP.
	Note: NOI packages submitted with alternate BMPs not approved by the Department will be returned to the Applicant.

c.	Do you have any information regarding riparian buffer which differs from Section G, Riparian Buffer?
	Yes ☐ No ⊠
	Explain:
	The proposed earth disturbance activities of Phase 2A are not to be conducted within 150 ft of an HQ watershed; therefore, riparian buffers are not required.
	Refer to PCSM Report Narrative, Section IX.
d.	Thermal Impacts Analysis
	Explain how thermal impacts associated with this project were avoided, minimized, or mitigated.
	Thermal impacts associated with the project will be minimized and/or mitigated through the incorporation of various site restoration activities. The disturbed areas will be restored and seeded as soon as practicable and /or directing runoff to vegetated areas to reduce the temperature of runoff prior to discharge into the streams. Thermal impacts within the roadway will not be impacted since an increase in impervious is not proposed. The runoff from the pavement within the limit of disturbance will drain to a storm sewer network, which will provide an opportunity for the storwmater to cool before
	discharging into the receiving surface water.
	Refer to PCSM Report Narrative, Section VIII.
e.	Off-Site Discharge Analysis  Does the activity propose any off-site discharges to areas other than surface waters?   Yes  No
	If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring
	properties.
	The applicant must provide a demonstration in both E&S and PCSM/SR plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

	SECTION G. RIPARIAN BUFFER
1.	Will you be protecting, converting or establishing a voluntary riparian forest buffer as part of this project?   Yes  No  If yes, as part of the PCSM/SR Plan, provide a Buffer Management Plan.
2.	Will proposed earth disturbance activities be conducted in an EV or HQ watershed AND within 150 feet of a perennial or intermittent river, stream, or creek, or lake, pond, or reservoir? $\square$ Yes $\square$ No
	If no, proceed to the next section/module.
3.	Does this project qualify for an exception (see § 102.14(d)(1))? ☐ Yes ☐ No
	If yes, indicate below the type of project for which the exception applies by marking the appropriate box.
	Oil and gas activities for which site reclamation or restoration is part of the permit authorization in Chapter 78 and 78a.
	☐ Road maintenance activities.
	☐ The repair or maintenance of existing pipelines and utilities.
	☐ Other (see §102.14(d)(1))
	If exceptions are checked, explain how existing riparian buffer will be undisturbed to the extent practicable. Provide a demonstration that the requirements of §102.14(b) are met, or provide the necessary information to request a riparian buffer waiver.
4.	Are you requesting a riparian buffer waiver for this project (see § 102.14(d)(2))? ☐ Yes ☐ No
	If yes, indicate below the type of project for which you are requesting a waiver by marking the appropriate box.
	☐ Linear project that may include pipelines, public roadways, rail lines, or utility lines.
	Project is of a temporary nature where the site will be fully restored to its preexisting conditions during the ESCGP permit term.
	Project where compliance with mandatory riparian buffers is not appropriate or feasible due to site characteristics or existing structures at the project site.
	☐ Other (see §102.14(d)(2)):
	If waivers are checked, explain how existing riparian buffers will be undisturbed to the extent practicable.
	Note: If "Yes" to #2 <b>AND</b> "No" to #3 and #4, provide an attachment to demonstrate how the requirements of §102.14 are met.

a. PCSM/SR Plan Summary
Provide a summary of proposed BMPs and their performance to manage PCSM/SR for the project.
The proposed BMP is site restoration for the disturbed areas. Through site restoration, pre-construction will match post-construction. There will be no net increase in volume runoff and peak rate or increase impact to water quality. hh
Check all that apply ☐ PCSM BMPs ☐ SR BMPs
<b>b.</b> Do you have any information regarding riparian buffer which differs from what was submitted in the Section G, Riparian Buffer?
☐ Yes   ☑ No
Explain:
a Thermal Impacts Analysis
c. Thermal Impacts Analysis  Explain how thermal impacts associated with this project were avoided, minimized, or mitigated.
Explain flow thermal impacts associated with this project were avoided, minimized, or mitigated.
Thermal impacts associated with the project will be minimized and/or mitigated through the incorporation of various site restoration activities. The disturbed areas will be restored and seeded as soon as practicable and /or directing runoff to vegetated areas to reduce the temperature of runoff prior to discharge into the streams. Thermal impacts within the roadway will not be impacted since an increase in impervious is not proposed. The runoff from the pavement within the limit of disturbance will drain to a storm sewer network, which will provide an opportunity for the storwmater to cool before discharging into the receiving surface water.
Refer to PCSM Report Narrative, Section VIII.
d. Off-Site Discharge Analysis.
Does the activity propose any off-site discharges to areas other than surface waters?  Yes  No If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring properties.
The Applicant must provide a demonstration in both the E&S and PCSM/SR Plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

### e. Summary Table for Supporting Calculation and Measurement Data (See NOI Instructions for additional guidance with this section)

The remainder of this section (Summary Table for Calculation and Measurement Data) does not need to be completed for areas of projects involving oil and gas activities authorized by Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure which will be restored to meadow in good condition or better or existing conditions.

#### f. Summary Description of PCSM/SR BMPs

In the lists below, check the BMPs identified in the PCSM Plan. The primary function(s) of the BMP listed in the functions column (infiltration/recharge; detention/retention; water quality). Additional functions may be added if applicable to that BMP. List the stormwater volume and area of runoff to be treated by each BMP type when calculations are required. If any BMP in the PCSM/SR Plan is not listed below, describe it in the space provided after "Other". A summary table with infiltration testing information (Attachment E, included in the NOI Instructions) must be submitted for all Bio-infiltration BMPs included in PCSM/SR plan.

For Rate control provide the volume of stormwater treated and acres treated for the 100-year/24-hour storm event.

For volume control and water quality provide the volume of stormwater treated and acres treated for the 2-year/24-hour storm event.

Key for BMP purpose(s): VC = Volume Control; RC = Rate Control; and WQ = Water Quality

g. Critical PCSM Plan stage	S				
Identify and list critical stages	of implementation of t	he PCSM Plan for which	a licensed professional	or designee shall	
be present on site.					
A licensed professional to be SR-4.	present during the site	restoration activities as r	noted in the Site Restor	ation Schedule on	

#### SECTION I. ANTIDEGRADATION ANALYSIS

This section must be completed where earth disturbance activities will be conducted in the watershed of a surface water with an existing or designated use of exceptional value or high quality pursuant to Chapter 93 (relating to water quality standards), projects where any part is located in an exceptional value wetland in accordance with 25 Pa. Code § 105.17, and projects where any part is located in the watershed of an impaired surface water where the cause of impairment is identified as siltation.

#### Part 1 - NONDISCHARGE ALTERNATIVES EVALUATION

The applicant must consider and describe any and all non-discharge alternatives for the entire project area which are environmentally sound and will:

- Minimize accelerated erosion and sedimentation during the earth disturbance activity
- Achieve no net change from pre-development to post-development volume, rate and concentration of pollutants in water quality

#### E & S Plan PCSM/SR Plan Check off the environmentally sound nondischarge Best Check off the environmentally sound nondischarge Best Management Practices (BMPs) listed below to be used after Management Practices (BMPs) listed below to be used prior to, during, and after earth disturbance activities that construction that have been incorporated into the PCSM/SR Plan based on your site analysis. For non-discharge BMPs have been incorporated into your E & S Plan based on the For non-discharge BMPs not checked, not checked, provide an explanation of why they were not site analysis. provide an explanation of why they were not utilized. Also utilized. Also for BMPs checked, provide an explanation of why they were utilized. (Provide the analysis and attach for BMPs checked, provide an explanation of why they were utilized. (Provide the analysis and attach additional additional sheets if necessary) sheets if necessary) Nondischarge BMPs Nondischarge BMPs ☐ Alternative Siting ☐ Alternative Siting Alternative location Alternative location Alternative configuration Alternative configuration Alternative location of discharge Alternative location of discharge Limited Disturbed Area Low Impact Development (LID / BSD) Limiting Extent & Duration of Disturbance (Phasing, Riparian Buffers (150 ft. min.) Sequencing) Riparian Forest Buffer (150 ft. min.) Riparian Buffers (150 ft. min.) Infiltration Riparian Forest Buffer (150 ft. min.) Water Reuse Other \_ Other Will the non-discharge alternative BMPs eliminate the net Will the non-discharge alternative BMPs eliminate the net change in rate, volume and quality during construction? change in rate, volume and quality after construction? ☐ Yes ☐ No ☐ Yes ☐ No If yes, antidegradation analysis is complete. If yes, antidegradation analysis is complete. If no, proceed to Part 2. If no, proceed to Part 2.

#### PART 2 - ANTIDEGRADATION BEST AVAILABLE COMBINATION OF TECHNOLOGIES (ABACT)

If the net change in stormwater discharge from or after construction is not fully managed by nondischarge BMPs, the applicant must utilize ABACT BMPs to manage the difference. The Applicant must specify whether the discharge will occur during construction, post-construction or both, and identify the technologies that will be used to ensure that the discharge will be a non-degrading discharge. ABACT BMPs include but are not limited to:

E & S Plan	PCSM/SR Plan		
☐ Treatment BMPs:         Sediment basin with skimmer           ☐ Sediment basin ratio of 4:1 or greater (flow length to basin width)         Sediment basin with 4-7 day detention           ☐ Flocculants         Compost Filter Socks           ☐ Compost Filter Sock Sediment Basin         RCE w/ Wash Rack           ☐ Land disposal:         Vegetated filters           ☐ Riparian buffers <150ft.	□ Treatment BMPs: Infiltration Practices   □ Wet ponds Created wetland treatment systems   □ Vegetated swales Manufactured devices   □ Bio-retention/infiltration Green Roofs   □ Land disposal: Vegetated filters   □ Riparian Buffers <150ft.		
Are the ABACT BMPs selected sufficient to minimize E&S discharges to the extent that existing or designated surface water uses are protected?  Yes No If yes, Antidegradation analysis is complete. If no, NOI Application will be returned to the Applicant.	Are the ABACT BMPs selected sufficient to achieve no net change and assure that existing or designated surface water uses are protected?  Yes No If yes, Antidegradation analysis is complete. If no, NOI Application will be returned to the Applicant.		

SECTION J. COMPLIA	ANCE HISTORY REVIEW		
Is/was the applicant(s) in violation of any Department regulation, order, schedule of compliance or permit or in violation of any department regulated activities within the past five years?  ☐ Yes ☐ No			
f yes, provide the permit number or facility name, a brief description of the violation, the compliance schedule (includ dates and steps to achieve compliance) and the current compliance status. (Attach additional information on a separ sheet, when necessary)			
Permit Program or Activity:	Permit Number (if applicable):		
Steps taken to achieve compliance	Date(s) compliance achieved		
Current Compliance Status:   In-Compliance	In Non-Compliance		
If in non-compliance, attach schedule for achieving compliance	e.		

#### SECTION K. CERTIFICATION BY PERSON PREPARING E&S AND PCSM/SR PLANS

I do hereby certify to the best of my knowledge, information, and belief, that the Erosion and Sediment Control and PCSM/Site Restoration Plans are true and correct, represent actual field conditions, and are in accordance with the 25 Pa. Code Chapters 78/78a and 102 of the Department's rules and regulations. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

ior submitting raise information, including the	possibility of fine and im	prisoriment.

#### **EXPEDITED REVIEW PROCESS**

In addition to the certification required above, applicants using the expedited permit review process must attach an E&S and PCSM/Site Restoration Plans developed and sealed by a licensed professional engineer, surveyor or professional geologist. The plans shall contain the following certification:

I do hereby certify to the best of my knowledge, information, and belief, that the E & S Control and PCSM/SR BMPs are true and correct, represent actual field conditions and are in accordance with the 25 Pa. Code Chapters 78 / 78a and 102 of the Department's rules and regulations. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

#### SECTION L. APPLICANT CERTIFICATION

#### Applicant Certification

I certify under penalty of law, as provided by 18 Pa. C.S.A. § 4904, that this application and all related attachments were prepared by me or under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my own knowledge and on inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. The responsible official's signature also verifies that the activity is eligible to participate in the ESCGP, and that the applicant agrees to abide by the terms and conditions of the permit. BMP's, E&S Plan, PPC Plan, PCSM Plan, and other controls are being or will be, implemented to ensure that water quality standards and effluent limits are attained.

I grant permission to the agencies responsible for the permitting of this work, or their duly authorized representative to enter the project site for inspection purposes. I will abide by the conditions of the permit if issued and will not begin work prior to permit issuance.

(For individuals no indication of title is necessary, choose the box below. All others proceed to the next paragraph)
