SECTION E. PROJECT INFORMATION						
1. Total Project Area/Project Site (Ac): 34	8.81	Total Disturbed Area (Ac):	38.81			
Increased disturbed acreage (for permit modification only) 0						
Fee: (For additional information regarding fees Fees.)	, refer to N	OI Instructions #3 Permit NOI Fil	ing \$ 2,900			
2. Project Name: Adelphia Gateway Project, Tilgl	hman Lateral	, Phase 2B				
3. Project Type (Check all that apply) Oil/Gas Well 1 Transmission Facility Gathering Facility Processing Facility Treatment Facility Well Development Impoundment Compressor Station Non-FERC regulated Transmission Facility Pipeline Ground/Surface Water Withdrawal Site						
Other						
¹ If Oil/Gas Well; is the well conventional or unconv <u>Project Description</u>	ventional?	Conventional	Unconventional			
The Adelphia Gateway Pipeline is an 84-mile pipeline that runs from Martins Creek to Marcus Hook. Facility upgrades will occur to thirteen (13) sites along the pipeline: Quakertown Compressor Station, East Perkiomen Blowdown, Skippack Pike Valve Site, Perkiomen Creek Blowdown, Schuylkill River Blowdown, Cromby Blowdown, French Creek Blowdown, Mainline Valve 2, Paoli Pike Blowdown, Chester Creek Blowdown, Mainline Valve 1, Transco Meter Station, and Marcus Hook Compressor and Meter Station.						
The Tilghman and Parkway lateral, known as Phas State Line/Marcus Hook Compressor and Meter St and horizontal directional drill (HDD) installation me	tation and Tra					
The Tilghman lateral pipeline, known as Phase 2B, consists of approximately 4.4 miles of a 16-inch O.D. pipeline. The installation consists of open cut for approximately 0.6 miles and horizontal directional drill (HDD) for approximately 3.8 miles. The Tilghman lateral pipeline, known as Phase 2B, consists of approximately 4.4 miles of proposed 16-inch O.D. pipeline. The installation consists of open cut for approximately 0.6 miles and horizontal directional drill (HDD) for approximately 3.8 miles. The total limit of disturbance is 24.76 acres. However, only 1.3 acres is open cut trench. The remaining pipe installation is to be completed using HDD, minimizing surface disturbance. The remaining area included in the LOD is temporary workspace intended for parking, staging materials and equipment, and stockpiling. Mechanical piping and two buildings are proposed at the PECO Meter Station where the Tilghman Lateral ends. The entire limit of disturbance for the Tilghman Lateral section will be restored to existing conditions and site restoration and PCSM devices are proposed at the PECO Meter Station.						
This application is for Phase 2B only. Provide the date of pre-application meeting (if cond	ducted with th	ne Department) 2/21/2019				
 Provide the latitude and longitude coordinate degrees and North American Datum 1983. T accuracy. For linear projects provide the project 	The coordina

	Non-Surface Receiving Water: (include off-site discharges)						

SECTION F. EROSION AND SEDIMENT CONTROL (E&S) PLAN See the attached Instructions for additional guidance with E&S Plans Erosion and Sediment Control Plan BMPs should be designed to minimize accelerated erosion and sedimentation through limiting the extent and duration of earth disturbance, protection of existing drainage and vegetation, limiting soil compaction and controlling the generation of increased runoff. The Department recommends the use of the Pennsylvania Erosion & Sedimentation Pollution Control Program Manual (E&S Manual) (363-2134-008) to achieve this goal. The E&S Plan must meet the requirements of Pa. Code § 102.4(b) and submitted with the NOI. Also, see section 2. of the NOI instruction for detailed information on completing the E&S plan and additional requirements. a. E&S Plan Summary Provide a summary of proposed E&S BMPs and their performance to manage E&S for the project. The following measures are aimed at controlling accelerated erosion and sedimentation during construction. Temporary erosion and sediment control will be accomplished by utilizing Best Management Practices, such as compost filter sock, inlet protection, pumped filter water bag, temporary stream and wetland crossings. The extent and duration of earth disturbance is to be minimized to limit impacts of erosion and sedimentation to neighboring and downstream properties. b. E&S Plan BMP Design Check those that apply: \boxtimes E&S Plan is designed using BMPs in the E&S Manual. E&S Plan is designed using an alternative BMP or design standard approved by DEP. Note: NOI packages submitted with alternate BMPs not approved by the Department will be returned to the Applicant.

C.	Do you have any information regarding riparian buffer which differs from Section G, Riparian Buffer?									
	Yes 🗌 No 🖂									
	Explain:									
The proposed earth disturbance activities of Phase 2B are not to be conducted within 150 ft of an HQ watershee therefore, riparian buffers are not required.										
	Refer to PCSM Report Narrative, Section XI.									

d. Thermal Impacts Analysis

Explain how thermal impacts associated with this project were avoided, minimized, or mitigated.

Thermal impacts associated with the project will be minimized and/or mitigated through the incorporation of various site restoration activities. The disturbed areas will be restored and seeded as soon as practicable and /or directing runoff to vegetated areas to reduce the temperature of runoff prior to discharge into the streams. Thermal impacts within the roadway will not be impacted since an increase in impervious is not proposed. The runoff from the pavement within the limit of disturbance will drain to a storm sewer network, which will provide an opportunity for the storwmater to cool before discharging into the receiving surface water.

At the PECO Meter Station, the disturbed areas will be restored to existing conditions as soon as practicable or directing runoff prior to discharge into the streams into BMPs. Roof drains will be connected to the dry wells that will temporarily store and infiltrate stormwater runoff from the roofs of structures. This will provide an opportunity for the stormwater to cool before discharging into the receiving surface water.

Refer to PCSM Report Narrative, Section X.

e. Off-Site Discharge Analysis

Does the activity propose any off-site discharges to areas other than surface waters? 🛛 Yes 🗌 No
If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring
properties.

The applicant must provide a demonstration in both E&S and PCSM/SR plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

	SECTION G. RIPARIAN BUFFER
1.	Will you be protecting, converting or establishing a voluntary riparian forest buffer as part of this project? Yes No If yes, as part of the PCSM/SR Plan, provide a Buffer Management Plan.
2.	Will proposed earth disturbance activities be conducted in an EV or HQ watershed AND within 150 feet of a perennial or intermittent river, stream, or creek, or lake, pond, or reservoir? \Box Yes \boxtimes No
	If no, proceed to the next section/module.
3.	Does this project qualify for an exception (see § 102.14(d)(1))? Yes No
	If yes, indicate below the type of project for which the exception applies by marking the appropriate box.
	Oil and gas activities for which site reclamation or restoration is part of the permit authorization in Chapter 78 and 78a.
	Road maintenance activities.
	The repair or maintenance of existing pipelines and utilities.
	Other (see §102.14(d)(1))
	If exceptions are checked, explain how existing riparian buffer will be undisturbed to the extent practicable. Provide a demonstration that the requirements of §102.14(b) are met, or provide the necessary information to request a riparian buffer waiver.
4.	Are you requesting a riparian buffer waiver for this project (see § 102.14(d)(2))? Yes No
	If yes, indicate below the type of project for which you are requesting a waiver by marking the appropriate box.
	Linear project that may include pipelines, public roadways, rail lines, or utility lines.
	Project is of a temporary nature where the site will be fully restored to its preexisting conditions during the ESCGP permit term.
	Project where compliance with mandatory riparian buffers is not appropriate or feasible due to site characteristics or existing structures at the project site.
	Other (see §102.14(d)(2)):
	If waivers are checked, explain how existing riparian buffers will be undisturbed to the extent practicable.
	Note: If "Yes" to #2 AND "No" to #3 and #4, provide an attachment to demonstrate how the requirements of §102.14 are met.

SECTION H. POST CONSTRUCTION STORMWATER MANAGEMENT (PCSM) AND/OR SITE RESTORATION(SR) PLAN									
See NOI Instructions for additional guidance with PCSM Plans PCSM/SR BMPs should be designed to use natural measures to eliminate pollution, infiltrate runoff, not require extensive construction/maintenance, promote pollutant reduction, and preserve the integrity of stream channels. All PCSM/SR BMPs proposed in the PCSM/SR Plan must be designed in accordance with Ch. 102, Ch. 78a for unconventional operations, Ch. 78 for conventional operations and the <i>Pennsylvania Stormwater Best Management Practices Manual (Stormwater BMP Manual)</i> (363-0300-002). If alternate design criteria are utilized for the proposed project, they must have prior approval by the Department, or the NOI Application will be returned to the Applicant.									
	After construction is completed, how much of the entire disturbed area will be restored to meadow in good condition or better, or existing conditions? 🛛 All 🔲 Partial 🔄 None								
	SM narrative a toration plan.	and drawings for remaining impervio	us area. Also include a	map showing the proposed o	contours of				
required by gravel, and	If there are additional stages of the project prior to permit termination or expiration, list the stages and provide the documents required by subsection 'a' to section 'g' for each stage (e.g. partial restoration or changes to the amount of compacted areas, gravel, and/or impervious areas). Upload a narrative for each additional stage in addition to the drawings.								
	EXAMPLE Stage No	Stage Name	PCSM Plan	SR Plan

1. Act 167 Plan approvals on or after January 2005 – The attached PCSM/SR Plan, in its entirety, is consistent with all requirements pertaining to rate, volume, and water quality from an Act 167 Stormwater Management Plan approved by DEP on or after January 2005. Box 1 must be checked if a current, DEP approved Act 167 plan exists.									
2.	<i>Stormwa</i> Chapter stormwa or to a c	SM/SR Plan meets the standard ater BMP Manual. For projects invol 78 or Chapter 78a (well pads) or pi ter management requirements are r ondition of meadow in good conditio uirements in the regulations, which a	ving oil and gas activitie pelines and other simila net for all areas that are n or better. <i>[Note: PCSN</i>	es authorized by a permit iss r utility infrastructure, post c restored to preconstruction <i>I plans must meet both the</i> v	sued under onstruction conditions volume and				
0	2 Alternative Design Standard The attached DCSM/SD Dian was developed using approaches as provided								

3. Alternative Design Standard – The attached PCSM/SR Plan was developed using approaches as provided in 102.8(g)(2)(iv) and 102.8(g)(3)(iii). Demonstrate/explain in the space provided below how this standard will be either more protective than what is required in 102.8(g)(2) and 102.8(g)(3) or will maintain and protect existing water quality and existing and designated uses.

PCSM/SR BMP Alternative Standards:
Has the alternative BMP or design standard been approved by the Department? N/A
Yes
□ No – Do not submit the ESCGP-3 application and see Section (H) of the NOI Instructions concerning the alternative BMP approval process.
Water Quality Compliance:
Does the PCSM/SR plan comply with requirements for volume control? $igsqnee$ Yes $igsqnee$ No
If yes, is at least 90% of the disturbed area controlled by a PCSM BMP? $oxedsymbol{ ext{M}}$ Yes $oxedsymbol{ ext{D}}$ No
If yes, do you have the Standard PCSM Worksheet # 10 attached to show water quality compliance has achieved? 🖾 Yes 🛛 🗌 No
If no, attach Standard PCSM Worksheets # 12 and #13 to show water quality compliance has achieved.
If PCSM/SR plan is not complying with the requirements for volume control, attach Standard PCSM Worksheets # 11, # 12 and #13 to show water quality compliance has achieved.
a. PCSM/SR Plan Summary
Provide a summary of proposed BMPs and their performance to manage PCSM/SR for the project.
Through site restoration and dry wells at the PECO Meter Station, there will be no net increase in volume runoff and peak rate or increase impact to water quality.
Check all that apply 🛛 PCSM BMPs 🛛 🖾 SR BMPs
b. Do you have any information regarding riparian buffer which differs from what was submitted in the Section G, Riparian Buffer?
🗌 Yes 🛛 No
Explain:
Refer to PCSM Narrative, Section XI
c. Thermal Impacts Analysis
Explain how thermal impacts associated with this project were avoided, minimized, or mitigated. Thermal impacts associated with the project will be minimized and/or mitigated through the incorporation of various site restoration activities. The disturbed areas will be restored and seeded as soon as practicable and /or directing runoff to vegetated areas to reduce the temperature of runoff prior to discharge into the streams. Thermal impacts within the roadway will not be impacted since an increase in impervious is not proposed. The runoff from the pavement within the limit of disturbance will drain to a storm sewer network, which will provide an opportunity for the storwmater to cool before discharging into the receiving surface water.
At the PECO Meter Station, the disturbed areas will be restored to existing conditions as soon as practicable or directing runoff prior to discharge into the streams into BMPs. Roof drains will be connected to the dry wells that will temporarily store and infiltrate stormwater runoff from the roofs of structures. This will provide an opportunity for the stormwater to cool before discharging into the receiving surface water.

Refer to PCSM Report Narrative, Section X

d. Off-Site Discharge Analysis.

Does the activity propose any off-site discharges to areas other than surface waters? 🛛 Yes 🗌 No

If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring properties.

The Applicant must provide a demonstration in both the E&S and PCSM/SR Plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

e. Summary Table for Supporting Calculation and Measurement Data (See NOI Instructions for additional guidance with this section)

The remainder of this section (Summary Table for Calculation and Measurement Data) does not need to be completed for areas of projects involving oil and gas activities authorized by Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure which will be restored to meadow in good condition or better or existing conditions.

Watershed Name: Delaware River - PECO Meter Station

Volume Control design storm frequency <u>2-yr</u> Rainfall amount <u>3.25</u> inches	Pre-construction	Post Construction	Net Change
Impervious area (acres)	0.00	0.00	0.00
Volume of stormwater runoff (acre- feet) without planned stormwater BMPs	0.005	0.006	+0.001
Volume of stormwater runoff (acre- feet) with planned stormwater BMPs		0.003	+0.002
Stormwater discharge rate for the design frequency storm	Pre-construction	Post Construction	Net Change
1) 2-Year/24-Hour	0.11	0.11	0.00
2) 10-Year/24-Hour	0.23	0.21	-0.02
3) 50-year/24-Hour	0.39	0.36	-0.03
4) 100-year/24-Hour	0.47	0.44	-0.03

f. Summary Description of PCSM/SR BMPs

In the lists below, check the BMPs identified in the PCSM Plan. The primary function(s) of the BMP listed in the functions column (infiltration/recharge; detention/retention; water quality). Additional functions may be added if applicable to that BMP. List the stormwater volume and area of runoff to be treated by each BMP type when calculations are required. If any BMP in the PCSM/SR Plan is not listed below, describe it in the space provided after "Other". A summary table with infiltration testing information (Attachment E, included in the NOI Instructions) must be submitted for all Bio-infiltration BMPs included in PCSM/SR plan.

For Rate control provide the volume of stormwater treated and acres treated for the 100-year/24-hour storm event.

For volume control and water quality provide the volume of stormwater treated and acres treated for the 2-year/24-hour storm event.

Key for BMP purpose(s): VC = Volume Control; RC = Rate Control; and WQ = Water Quality

g. Critical PCSM Plan stages

Identify and list critical stages of implementation of the PCSM Plan for which a licensed professional or designee shall be present on site.

A licensed professional to be present during the site restoration activities as noted in the Site Restoration Schedule on SR-4, and the installation of the dry wells.

SECTION I. ANTIDEGRADATION ANALYSIS

This section must be completed where earth disturbance activities will be conducted in the watershed of a surface water with an existing or designated use of exceptional value or high quality pursuant to Chapter 93 (relating to water quality standards), projects where any part is located in an exceptional value wetland in accordance with 25 Pa. Code § 105.17, and projects where any part is located in the watershed of an impaired surface water where the cause of impairment is identified as siltation.

Part 1 - NONDISCHARGE ALTERNATIVES EVALUATION

The applicant must consider and describe any and all non-discharge alternatives for the entire project area which are environmentally sound and will:

- Minimize accelerated erosion and sedimentation during the earth disturbance activity
- Achieve no net change from pre-development to post-development volume, rate and concentration of pollutants in water quality

E & S Plan	PCSM/SR Plan
Check off the environmentally sound nondischarge Best Management Practices (BMPs) listed below to be used prior to, during, and after earth disturbance activities that have been incorporated into your E & S Plan based on the site analysis. For non-discharge BMPs not checked, provide an explanation of why they were not utilized. Also for BMPs checked, provide an explanation of why they were utilized. (Provide the analysis and attach additional sheets if necessary)	Check off the environmentally sound nondischarge Best Management Practices (BMPs) listed below to be used after construction that have been incorporated into the PCSM/SR Plan based on your site analysis. For non-discharge BMPs not checked, provide an explanation of why they were not utilized. Also for BMPs checked, provide an explanation of why they were utilized. (Provide the analysis and attach additional sheets if necessary)
An alternative location, configuration or location was not utilized since upgrades are required to connect the pipeline to existing sites; however, the limit of disturbance is minimized. Regulations do not require a riparian buffer or riparian forest buffer since Marcus Hook Creek is not EV/HQ quality.	An alternative location, configuration or location of discharge was not utilized since upgrades are required to connect the pipeline to existing sites; however, the limit of disturbance is minimized. Regulations do not require a riparian buffer or riparian forest buffer since Marcus Hook Creek is not EV/HQ quality. No structural BMPs proposed (site restoration only); therefore, no infiltration and water reuse is applicable.

Will the non-discharge alternative BMPs eliminate the net change in rate, volume and quality during construction? ⊠ Yes □ No	Will the non-discharge alternative BMPs eliminate the net change in rate, volume and quality after construction? ⊠ Yes □ No
If yes, antidegradation analysis is complete. If no, proceed to Part 2.	If yes, antidegradation analysis is complete. If no, proceed to Part 2.

PART 2 - ANTIDEGRADATION BEST AVAILAB	LE COMBINATION OF TECHNOLOGIES (ABACT)							
If the net change in stormwater discharge from or after construction is not fully managed by nondischarge BMPs, the applicant must utilize ABACT BMPs to manage the difference. The Applicant must specify whether the discharge will occur during construction, post-construction or both, and identify the technologies that will be used to ensure that the discharge will be a non-degrading discharge. ABACT BMPs include but are not limited to:								
E & S Plan	PCSM/SR Plan							
Image: Sediment BMPs: □ Sediment basin with skimmer □ Sediment basin ratio of 4:1 or greater (flow length to basin width) □ Sediment basin with 4-7 day detention □ Flocculants □ Compost Filter Socks □ Compost Filter Sock Sediment Basin □ RCE w/ Wash Rack □ Land disposal: □ Vegetated filters □ Riparian buffers <150ft.	□ Treatment BMPs: □ Infiltration Practices □ Wet ponds □ Created wetland treatment systems □ Vegetated swales □ Manufactured devices □ Bio-retention/infiltration □ Green Roofs □ Land disposal: □ Vegetated filters □ Riparian Buffers <150ft.							
 Are the ABACT BMPs selected sufficient to minimize E&S discharges to the extent that existing or designated surface water uses are protected? ☑ Yes □ No If yes, Antidegradation analysis is complete. If no, NOI Application will be returned to the Applicant. 	Are the ABACT BMPs selected sufficient to achieve no net change and assure that existing or designated surface water uses are protected? ∑ Yes □ No If yes, Antidegradation analysis is complete. If no, NOI Application will be returned to the Applicant.							

SECTION J. COMPLIANCE HISTORY REVIEW								
Is/was the applicant(s) in violation of any Department regulation, order, schedule of compliance or permit or in violation of any department regulated activities within the past five years? □ Yes □ No								
If yes, provide the permit number or facility name, a brief description of the violation, the compliance schedule (including dates and steps to achieve compliance) and the current compliance status. (Attach additional information on a separate sheet, when necessary)								
Permit Program or Activity: Brief Description of non-compliance:	Permit Number (if applicable):							
Steps taken to achieve compliance	Date(s) compliance achieved							
Current Compliance Status: In-Compliance] In Non-Compliance							
If in non-compliance, attach schedule for achieving compliance	ə.							

SECTION K. CERTIFICATION BY PERSON PREPARING E&S AND PCSM/SR PLANS

I do hereby certify to the best of my knowledge, information, and belief, that the Erosion and Sediment Control and PCSM/Site Restoration Plans are true and correct, represent actual field conditions, and are in accordance with the 25 Pa. Code Chapters 78/78a and 102 of the Department's rules and regulations. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

EXPEDITED REVIEW PROCESS

In addition to the certification required above, applicants using the expedited permit review process must attach an E&S and PCSM/Site Restoration Plans developed and sealed by a licensed professional engineer, surveyor or professional geologist. The plans shall contain the following certification:

I do hereby certify to the best of my knowledge, information, and belief, that the E & S Control and PCSM/SR BMPs are true and correct, represent actual field conditions and are in accordance with the 25 Pa. Code Chapters 78 / 78a and 102 of the Department's rules and regulations. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

SECTION L. APPLICANT CERTIFICATION

Applicant Certification

I certify under penalty of law, as provided by 18 Pa. C.S.A. § 4904, that this application and all related attachments were prepared by me or under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my own knowledge and on inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. The responsible official's signature also verifies that the activity is eligible to participate in the ESCGP, and that the applicant agrees to abide by the terms and conditions of the permit. BMP's, E&S Plan, PPC Plan, PCSM Plan, and other controls are being or will be, implemented to ensure that water quality standards and effluent limits are attained.

I grant permission to the agencies responsible for the permitting of this work, or their duly authorized representative to enter the project site for inspection purposes. I will abide by the conditions of the permit if issued and will not begin work prior to permit issuance.

(For individuals no indication of title is necessary, choose the box below. All others proceed to the next paragraph)

Individual; proceed to signature portion.

I hereby certify under penalty of law, as provided by 18 Pa. C.S.A. § 4904, that I am the person who is responsible for decision-making regarding environmental compliance functions for <u>Adelphia Gateway, LLC</u>, the manager of one or more manufacturing, production, or operating facilities of the applicant and am authorized to make management decisions which govern the operation of regulated facility including having explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure the applicant's long term environmental compliance with environmental laws and regulations; and I am responsible for ensuring that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements.

	Summary of Bio-Infiltration BMPs													
	Infiltration Information					Drainage Information			BMP Information					
Structural	Measured Infiltration Rate ¹ (in./hr)	Factor of safety (min. of 2)	Design Infiltration rate (in./hr)	De-watering time ² (hr)	Elevation of limiting zone-water table bedrock, etc. ³	Total drainage area to BMP (sq. ft)	drainage area	Infiltration BMP Surface area (sq. ft)	Volume of runoff tributary to BMP during the 2yr/24 hr design storm ⁴ (cf)	Calculated removed volume (cf)	Maximum water surface elevation in BMP from 2yr storm ⁶	Infiltration elevation bottom of bed/basin ⁶	Elevation of infiltration test ⁷	Elevation of E&S sediment basin bottom (if applies)
Dry well 1	1.00	2	0.50	66	N/A	180	180	28	45	45	10.49	9.50	9.00	N/A
Dry well 2	1.25	2	0.625	6	N/A	80	80	28	20	20	10.34	10.00	9.00	N/A

All information should be based on the 2-yr/24-hr storm.

Provide page numbers from the stormwater narrative identifying the location of the above information.

¹The infiltration testing information should be located on the plan view of the PCSM plan and should include infiltration test elevation and rate ²Can include active infiltration time-dewatering time should not exceed 72 hours after the 2-yr/24-hr storm

³Depth to limiting zone is recommended to be at least 2 ft below infiltration

⁴The value should be greater than or equal to the volume to be infiltrated or managed by the BMP

⁶A maximum of 2 ft hydraulic head is recommended

⁷Provide supporting field notes/documentation from soil evaluation

Any deviation from the recommendations above should be adequately justified by a qualified professional and included with the application.

Note: This chart is for summary purposes only and should be consistent with all design calculations and worksheets.
