DEPARTMENT OF ENVIRONMENTAL PROTECTION

COMMONWEALTH OF PENNSYLVANIA
DEPARTMENT OF ENVIRONMENTAL PROTECTION
BUREAU OF ENVIRONMENTAL CLEANUP AND BROWNFIELDS
LAND RECYCLING PROGRAM

Land Recycling Program
Transmittal Sheet for Plan/Report Submission

Instructions: Please provide all requested information in each of the four sections. This transmittal sheet shall accompany any plan/report submitted to the Department under the Land Recycling Program. Proper completion of the Transmittal Sheet will assist Department review and may avoid a finding of plan/report deficiency. The Facility ID number can be obtained from the Department's Environmental Cleanup Program in the region where the site is located.

Section 1 - Site Identification

eFACTS Facility ID 860730

Site Name Alliance 51st Street

Site Address 1646 South 51st Street

Municipality and County City of Philadelphia, Philadelphia County

Section 2 - Remediation Standard . . Plan/Report . . Fees

Identify the remediation standard being pursued and the type of plan/report being submitted. Please note required Department fees follow each type of plan/report.

Check the relevant standard and the type of plan/report being submitted.

☐ Background Standard
Final Report ($250 fee)

☒ Site-Specific Standard

- ☒ Remedial Investigation Report ($250 fee)
- ☐ Risk Assessment Report ($250 fee)
- ☒ Cleanup Plan ($250 fee)
- ☐ Final Report ($500 fee)*

Fees were paid on 2/14/25. Amended Report is being submitted within 60 day Technical Deficiency timeframe.

☐ Statewide Health Standard*
Final Report ($250 fee)

☐ Special Industrial Area

- ☐ Work Plan (no fee)
- ☐ Baseline Environmental Report (no fee)

*A final report submitted under a combination of cleanup standards should be accompanied with a fee representing the higher of the two standards' final report fee.

Ensure your check covers all required fees and is made payable to the **Commonwealth of Pennsylvania**.

Section 3 - Municipal/Public Notice Confirmation

There are two stages in the Land Recycling Program where municipal and public notices are required. Read the information associated with each stage. You will be asked to confirm that information establishing your compliance with these notification requirements has been included with this submission.

☐ Check here if you are planning to meet the Background or Statewide Health Standard and your Final Report has been submitted within 90 days of the release.

Indicate date of release here _____

No further completion of this section is required if your Final Report for these two standards conforms to the 90 day time frame.

Stage 1 - Notice of Intent to Remediate (NIR)

☒ Check here to confirm you have included proof that a copy of your NIR was provided to each municipality where your site is located. Proof will be a copy of your cover letter and a copy of a signed certified mail receipt slip from the municipality.

☒ Check here to confirm a copy of a proof of publication document from a newspaper serving the area of your site has been included with this submission.

☒ Check here to indicate that a Site-Specific Standard or a Special Industrial Area is involved and a municipal request was received for development of a public involvement plan. The plan/report submission shall include municipality and public comments, which were submitted, and your responses to those comments.

Stage 2 - Cleanup Plan/Report Submission

February 11, 2025 Place date here that each municipality was notified of any plan or report submitted under any of the three remediation standards.

Philadelphia Inquirer February 11, 2025 Place the newspaper name and date that your notice of your plan/report submission was published.

Section 4 - Project Contact

On the lines below, place the name, company, mailing addresses and business phone number of the individuals who can be contacted regarding this submission:

Consultant

Contact Person/Title: Lawrence G. Brunt/P.E. (Principle Engineer)

Phone Number 908-526-1000

Email Address larry.brunt@arcadis.com

Company Name: Arcadis

Mailing Address (street, city, state, zip)

1 Harvard Way, Ste 5, Hillsborough, NJ 08844

Remediator

Contact Person/Title: Max Ryan/Director of Development & Construction

Phone Number Property Owner/Remediator

Email Address mryan@allianceshp.com

1. Introduction

On behalf of Alliance 51st Street LLC (Alliance), Arcadis U.S., Inc. (Arcadis) has prepared this Act 2 Remedial Investigation Report and Cleanup Plan (RIR/Cleanup Plan) for the Former 51st Street Terminal (Facility ID: 51-10420) located at 1630-1646 South 51st Street in Philadelphia, Pennsylvania (Site; see Figure 1). This RIR/Cleanup Plan presents Alliance's remediation approach at the Site in conformance with Chapter 250 of Title 25 of the Pennsylvania Code, which relates to the administration of Pennsylvania's Land Recycling Program (Voluntary Cleanup Program; Act 2), and Pennsylvania Department of Environmental Protection (PADEP) guidance (PADEP 2021a). Public notifications of submittal of this RIR/Cleanup Plan are presented in Appendix A.

1.1 Administrative History

The Site is currently under review by PADEP through the Storage Tank and Spill Prevention Act (the Corrective Action Program) for the former aboveground storage tanks (ASTs), as well as the Act 2 Program. In 2021, PBF Logistics Products Terminals LLC (PBF Logistics), the former property owner, closed the ASTs with notice to PADEP. PBF Logistics removed liquids and sludge from the ASTs and lines and then removed the ASTs and lines. After line and tank removal, PBF Logistics sampled soil under the tanks and associated piping. These activities were performed from early August to the end of September 2021. During the AST closure activities, PBF Logistics identified a release of an unknown quantity of petroleum on August 16, 2021 and notified PADEP of the release on August 17, 2021. The release impacted soil that was subsequently excavated by PBF Logistics. PBF Logistics submitted an AST Closure Report to PADEP on December 15, 2021 (PBF Logistics 2021c).

Alliance acquired the Site from PBF Logistics in December 2021. On February 9, 2022, Alliance submitted a Notice of Intent to Remediate (NIR) for the Site under the Act 2 Program to obtain a relief of liability (ROL) for the constituents of concern (COCs) associated with the previous operations of the ASTs and, potentially, other COCs associated with the Act 2 Program (Alliance 2022a). Subsequent to receipt of the NIR, PADEP indicated that the previous Site owner, PBF Logistics, was required to submit a Site Characterization Report (SCR) for the closure of the ASTs by February 13, 2022 in response to the August 2021 Notice of Release Form (PBF Logistics 2021b). On November 3, 2022 Alliance submitted an SCR to fulfill PADEP requirements (Alliance 2022b).

On February 2, 2023, PADEP issued a letter disapproving the November 2022 SCR (PADEP 2023a). Alliance submitted a Revised Site Characterization Report (RSCR) for the Site to PADEP on June 27, 2023 (Alliance 2023a). As requested by PADEP, the RSCR focused only on the COCs associated with the former AST operations. The COCs associated with the Act 2 investigation were not included in the RSCR. The RSCR subsequently was approved by PADEP on September 27, 2023 (PADEP 2023b).

On November 27, 2023, Alliance submitted a Remedial Action Plan (RAP) for the AST case to PADEP (Alliance 2023b), as required by the PADEP's approval of the RSCR (PADEP 2023b). Although Site investigation activities had been performed to address both the AST and Act 2 cases, the RAP was submitted to close the AST case, as discussed with PADEP, and focused on the analytical parameters and investigation activities associated with the former ASTs and the petroleum products that were stored in the tanks. PADEP approved the RAP on February 22, 2024 (PADEP 2024; Appendix A).

Alliance submitted a revised Act 2 NIR to PADEP in July 2024 (Appendix A) to include additional COCs (see Section 5) and to propose attainment of a combination of PADEP Statewide Health Standards (SHS; PADEP 2021b) and Site-Specific Standards (SSS) to be demonstrated at the Site.

This RIR/Cleanup Plan is submitted for the Act 2 case and includes all COCs identified at the Site, including those COCs associated with the ASTs that were evaluated previously in the RSCR (Alliance 2023a) and RAP (Alliance 2023b). The remediation activities proposed in this RIR/Cleanup Plan are consistent with the activities previously proposed in the RAP and approved by PADEP (PADEP 2024).

Soil investigation activities have identified concentrations of benzene, naphthalene, bis(2-chloroethyl) ether, biphenyl, lead, total chromium, and hexavalent chromium at levels greater than their representative PADEP Non-Residential Soil Medium-Specific Concentrations (MSCs), chosen by using the lower of the PADEP Direct Contact and Non-Residential Soil-to-Groundwater screening values (PADEP 2021a). Soil delineation is complete to the property boundary in all compass directions, discussed in Section 5. This document proposes that SSS will be used for these COCs in soil, with pathway elimination consisting of an Environmental Covenant (EC) and controls that will be installed during redevelopment of the Site.

Groundwater sampling has identified benzene, naphthalene, lead, total chromium and hexavalent chromium at concentrations greater than the PADEP Non-Residential Used Aquifer Groundwater MSCs which have all been delineated to the Used Aquifer MSC. Based on the sampling results, this document proposes that SSS will be used for these COCs with pathway elimination consisting of an EC.

Soil gas was evaluated through the collection of soil gas samples and a comparison of soil and groundwater sampling results to the PADEP Non-Residential Vapor Intrusion (VI) Screening Values (SVs) (PADEP 2022a). As part of the warehouse construction during Site redevelopment, a passive sub-slab depressurization system (SSDS) will be installed as a proactive vapor intrusion mitigation measure to address soil beneath the building that contains COC concentrations greater than VI SVs.

It is anticipated that potentially complete exposure pathways associated with the Site will be eliminated by the Activity and Use Limitations (AULs) that will be memorialized in the EC for the Site, and that the Site will be in attainment with a combination of PADEP SHS (PADEP 2021b) and SSS (pathway elimination).

1.2 Public Involvement

In response to the revised Act 2 NIR, the City of Philadelphia requested that Alliance prepare a Public Involvement Plan (PIP). A draft PIP was prepared and reviewed by PADEP and the City of Philadelphia. The City of Philadelphia provided comments on the PIP on January 8, 2025 (City of Philadelphia 2025; Appendix A) during preparation of this RIR/Cleanup Plan and a revised PIP was provided to the City on January 21, 2025. Additional requests were received (Appendix A) and a revised PIP was sent to the City on February 13, 2025. Based on the February 28, 2025 PADEP Letter of Technical Deficiency (Appendix A) on the February 2025 version of this RIR/Cleanup Plan, and subsequent communications with community representatives, the PIP was further revised in March 2025. The final PIP is included as Appendix B. The PIP establishes several public involvement opportunities, including:

- Public meetings, near the site
- Maintenance of a site mailing list
- Establishment of an online information repository for public access of documents
- Designation of a contact person for community questions

In accordance with the PIP, a public meeting will be held as described in Appendix B, following the 30-day public comment period for this RIR/Cleanup Plan. The following topics will be discussed in the meeting:

- Location and concentration of COCs identified at the Site;
- Measures that will be implemented to protect the community;
- Remedial measures that will be implemented to address COCs; and
- Procedures to be implemented during redevelopment to minimize dust and control erosion.

Notification of the date and location of the public meeting will be published in the Philadelphia Inquirer at least 30 days in advance of the meeting.

1.3 Site Description

The Site subject to the Act 2 case is located at 1630-1646 South 51st Street in Philadelphia, Pennsylvania. The Site, including the area where the former ASTs were located, occupies an approximately 12-acre parcel located south of 51st Street in an industrial/commercial section of Philadelphia.

At the time of purchase by Alliance, there were approximately 2,100 square feet of improvements onsite: an approximately 1,000-square-foot garage/electrical building, an approximately 750-square-foot guard house, and an approximately 350-square-foot miscellaneous structure. A canopy was also present in the fueling area. The ASTs were demolished by PBF Logistics. All former improvements have been demolished. The remainder of the Site currently consists of gravel and fill areas where the ASTs were formerly located. An oil-water separator remains onsite (Figure 2). Historical aerial photographs since 1992 are presented in Appendix C.

It appears that the 500-year floodplain encroaches slightly onto the northeastern and eastern portions of the Site (Environmental Data Resources Inc. [EDR] 2021). The Schuylkill River is located approximately 100 feet to the east of the northeastern portion of the Site. The topography of the Site slopes toward the river, with elevations ranging from approximately 29 feet to 12 feet above mean sea level.

Eight monitoring wells (MW-1 through MW-5 and MW-7 through MW-9) are currently located onsite. A Site map showing property boundaries and pertinent current and former Site features is included as Figure 2.

1.4 Surrounding Area

The Site is on County Parcel Identification No. 884217325, in an industrial/commercial section of Philadelphia. The Site is bordered:

To the north by South 51st Street, beyond which is an abandoned industrial property;

To the south by railroad tracks, beyond which is Bartram's Garden, a public park that includes the Bartram's Garden Mile Trail that was formerly Warner Cement Company;

To the east by South 51st Street and part of Bartram's Garden Mile Trail, beyond which is the Schuylkill River; and,

To the west by railroad tracks, beyond which is a Foundation Building Materials warehouse that was formerly an Industrial Food Truck, LLC corporate office, as well as Ryerson Steel.

The surrounding properties and land use are depicted on Figure 3.

1.5 Soil and Geology

Based on EDR's search of the United States Department of Agriculture's Soil Conservation Service files (EDR 2021), the predominant soil type in the area of the Site is Urban Land. This soil type has variable draining and hydrologic properties. Soil boring logs completed by Arcadis during the investigation indicate the surficial geology to be light brown silty sand with mica clasts.

According to the Pennsylvania Geological Survey, the formation underlying the Site is the Wissahickon Formation, which is composed of a medium- to coarse-grained foliated crystalline rock ranging in texture from gneiss to schist. In the Delaware Valley, the Wissahickon Formation is typically a medium- to coarse-grained metamorphic rock characterized by abundant mica. It includes schistose beds in which mica is the predominant material, as well as other beds in which the rock has a gneissic character and where quartz, feldspar, and mica are the dominant minerals.

The Wissahickon Formation is varied in composition and degrees of metamorphism and dates to the Paleozoic Era. Structurally, it is frequently folded and commonly fractured by numerous joints. Its total thickness has been estimated to be between 5,000 and 8,000 feet.

Competent bedrock of the Wissahickon Formation was not encountered during the investigation activities. Historical and recent investigation locations are presented on Figure 4. Historical lithological information is limited for the Site. Available soil borings and inferred lithologic cross sections are provided in Appendix D.

1.6 Hydrogeology

Based on the investigation activities completed at the Site, groundwater is encountered in the overburden at depths between 3 and 13 feet below ground surface (bgs). Groundwater flow is to the east-northeast, toward the Schuylkill River. This stretch of the Schuylkill River is in the tidal zone, where there is a tidal swing of approximately 6 feet. Inferred groundwater elevation contour maps from the July 2022 and November 2024 events are presented on Figures 5 and 6, respectively. The horizontal groundwater gradient calculated from the November 2024 potentiometric surface map data is -0.0106 foot per foot for the overburden.

1.7 Site Investigation and Remediation History

The historical operations of the former ASTs and associated piping are the likely source of the petroleum-related COCs identified in soil and groundwater at the Site. Soil characterization activities were conducted in 2021, 2022, and 2023. Quarterly groundwater monitoring was initiated in 2022 as part of the Act 2 case. Historical and recent characterization and remedial activities are summarized in this RIR/Cleanup Plan. Additional details of historical activities can be found in the RSCR (Alliance 2023a) and are provided in Section 2 and Section 3 of this RIR/Cleanup Plan for soil and groundwater, respectively. Investigation locations are presented on Figure 4. Available survey data are presented in Appendix E. Available waste disposal documentation is presented in Appendix F.

Pertinent activities that have been conducted to date at the Site include:

<u>PRE-ACT 2</u>

- During August and September 2021, PBF Logistics closed the ASTs on the Site with notice to PADEP (PBF Logistics 2021a). As part of the closure activities, PBF Logistics removed the liquids and sludge from the

tanks and lines and collected AST closure confirmatory soil samples. All ASTs, their contents, and lines were removed from the Site.

- On August 17, 2021, PBF Logistics notified PADEP of a release of an unknown quantity of petroleum (PBF Logistics 2021b). Soil containing COCs from the release was subsequently excavated.
- In October 2021, Alliance conducted a Phase II environmental investigation as part of a potential acquisition of the Site. Soil borings were installed and sampled in the former tank containment areas. Existing monitoring wells (MW-1 through MW-4) were sampled. In addition, five temporary wells (TW-1 through TW-5) were installed and sampled (Alliance 2023a).
- On December 15, 2021, PBF Logistics submitted an AST Closure Report to PADEP (PBF Logistics 2021c).
- In December 2021, Alliance purchased the Site from PBF Logistics.

ACT 2

- On February 9, 2022, Alliance submitted an NIR under the Act 2 Program to obtain an ROL for the COCs identified onsite (Alliance 2022a). The COCs in the NIR were based on the Phase II investigation results referenced above.
- In March 2022, Arcadis installed 17 soil borings in and around Tank Containment Area 1 and installed three monitoring wells (MW-7 through MW-9) to delineate COCs in groundwater.
- In April 2022, Arcadis began a quarterly groundwater sampling program at the Site. Sampling events were completed in July 2022, October 2022, January 2023, April 2023, July 2023, October 2023, and January 2024. The groundwater samples were analyzed for volatile organic compounds (VOCs) and filtered lead. Sampling for hexavalent chromium was initiated in April 2024, as discussed later in this section. Groundwater sampling results through November 2024 are incorporated in this RIR/Cleanup Plan.
- On May 25, 2022, Arcadis collected seven soil gas samples, SG-1 through SG-7, from the Site at the locations of borings that had elevated photoionization detector (PID) readings during soil investigation activities (soil borings SB-103, SB-104, SB-105, SB-106, SB-204, SB-206, and SB-207).
- On November 3, 2022, Arcadis (on behalf of Alliance) submitted an SCR to fulfill PADEP requirements (Alliance 2022b). On February 2, 2023, PADEP issued a letter disapproving the November 2022 SCR (PADEP 2023a). A copy of the PADEP letter is provided in Appendix A.
- In March 2023, Arcadis advanced 19 soil borings (2040-P2, 1043-P4, 1043-P5, and SB-301 through SB-316) to delineate the extent of COCs in soil at the Site for both the AST and Act 2 cases. The analysis for each boring correlated to the COCs that potentially would be in the soil in that area.
- On June 27, 2023, Arcadis (on behalf of Alliance) submitted an RSCR to PADEP (Alliance 2023a).
- PADEP approved the RSCR on September 27, 2023 (PADEP 2023b). A copy of the PADEP letter is provided in Appendix A**.**
- On November 27, 2023, Arcadis (on behalf of Alliance) submitted a RAP for the AST case to PADEP (Alliance 2023b).
- PADEP approved the RAP on February 22, 2024 (PADEP 2024). A copy of the PADEP letter is provided in Appendix A**.** Quarterly RAPRs are submitted in accordance with the RAP to address the AST-related COCs. These results are also summarized herein for completeness.

- In April 2024, yellow-colored water was discovered leaving the Site, near the Bartram's Garden Mile Trail, by the Philadelphia Water Department (PWD). The PWD sampled the water and reported that it contained a synthetic dye. Alliance was advised of this on April 9, 2024 by Tridung Tran of PWD.
- On April 29, 2024, Arcadis sampled the surface water onsite to evaluate the potential contaminants and submitted the samples to laboratories for analysis for VOCs, semi-volatile organic compounds (SVOCs), and dyes (fluorescein, eosine and rhodamine WT, sulforhodamine B, and pyranine dyes) based on the information provided by PWD. No dyes were detected in the sample. No VOCs other than a low level of acetone were detected in the sample. Similarly, only estimated concentrations below laboratory reporting limits of bis(2-ethylhexyl) phthalate, benzo(b)fluoranthene, and benzo(k)fluoranthene were detected in the SVOC analyses. Arcadis also performed some field screening tests using field test strips. During these tests, the presence of chromate was identified. Arcadis then submitted a sample of the water (unfiltered) to a laboratory and confirmed that total chromium was present in the water.
- On May 30, 2024 and June 7, 2024, Arcadis conducted groundwater sampling for total and hexavalent chromium. Soil borings, test pits, and temporary wells also were installed and sampled. On June 6, 2024 a call with PADEP was conducted to discuss conditions and next steps, later summarized in a June 10, 2024 email to the PADEP (Appendix A).
- On July 3, 2024, Arcadis installed test pits onsite and sampled soil for total and hexavalent chromium. A detailed summary of the findings were provided to PADEP in a July 11, 2024 email (Appendix A).
- On July 22, 2024, Arcadis and PADEP collected split samples from the soil and sediments along Bartram's Garden Mile Trail for VOCs, SVOCs, metals, and total and hexavalent chromium. In addition, split surface water samples were collected from the Schuylkill River (see Section 5). The sampling was performed as discussed in a virtual meeting with PADEP on July 18, 2024.
- On July 30, 2024, a revised Act 2 NIR was submitted to PADEP to indicate a combination of standards and include total chromium and hexavalent chromium on the COC list.
- On July 30, 2024, Alliance participated in a virtual meeting with PADEP to review the sediment and soil removal activities completed along Bartram's Garden Mile Trail, fortification and construction of additional berms onsite in the drainage swale, installation of additional silt fencing, and follow up actions.
- On August 2, 2024, Arcadis conducted additional surficial soil sampling onsite for total and hexavalent chromium.
- On August 6, 2024, Arcadis recollected soil/sediment samples along Bartram's Garden Mile Trail for total and hexavalent chromium.
- On August 13, 2024, Arcadis and PADEP collected additional split soil samples along Bartram's Garden Mile Trail for total and hexavalent chromium. In addition, split samples were collected from standing water onsite for total and hexavalent chromium.
- On August 21, 2024, Alliance participated in a virtual meeting with PADEP to review the soil sampling results, presence of offsite sources of total and hexavalent chromium not related to the Site, stabilization and grading of the Site, Site redevelopment plans, and the Act 2 schedule.
- On August 23, 2024, Arcadis conducted groundwater sampling for total and hexavalent chromium for all monitoring wells.

- On September 16, 2024 and September 17, 2024, Arcadis conducted additional soil sampling along Batram's Garden Mile Trail and the rail line embankment for total and hexavalent chromium, focusing on upgradient areas and non-Site sources.
- On October 3, 2024, Alliance participated in a virtual meeting with PADEP, where addiitonal data were discussed and a path forward was agreed upon. PADEP requested that two full rounds of groundwater sampling be conducted to include total and hexavalent chromium and that results be reported in this RIR/Cleanup Plan. PADEP indicated that two additional rounds could be conducted to demonstrate attainment, and results could be presented in an RIR Addendum. The redevelopment status, Public Participation Plan, presence of offsite sources of total and hexavalent chromium not related to the Site, and the Act 2 schedule also were discussed in the meeting.
- On November 20, 2024 Alliance participated in a virtual meeting with PADEP to review additional soil sampling required, Act 2 schedule, Public Participation Plan, and a Human Health Risk Assessment for locations along Bartram's Garden Mile Trail.
- On November 21, 2024, Arcadis conducted additional groundwater sampling for total and hexavalent chromium. Additional details were provided to PADEP in a December 10, 2024 email (Appendix A).
- On January 8, 2025, additional soil samples were collected at the Site to complete the delineation of total and hexavalent chromium to the property boundaries.

Additional information regarding total and hexavalent chromium and associated sampling activities is discussed in Section 1.8.5 and Section 5.

This RIR/Cleanup Plan is submitted as part of the Act 2 case to address all COCs at the Site, including the petroleum-related COCs associated with the AST case.

1.8 Summary of Areas and Constituents

For the purposes of summarizing and reviewing the data, the Site has been separated into four areas: three tank containment areas and other Site areas. The three tank containment areas are associated with the AST case as well as the Act 2 case. The other Site areas are associated only with the Act 2 case. The COCs for each area are based on the historical contents of the tanks as well as the constituents identified during the due diligence and Act 2 investigation activities performed at the Site. The tank containment areas and investigation sampling locations are illustrated on Figure 4. Chromium-related evaluations are Site wide and are discussed separately in Section 1.8.5.

1.8.1 Tank Containment Area 1

Tank Containment Area 1 formerly included tanks TK-7750 and TK-7551 (PADEP identification numbers [IDs] 050A and 051A, respectively). These tanks historically stored gasoline (assumed to be both leaded and unleaded based on the age of tanks), diesel fuel, and fuel oil No. 2. Sampling requirements in this containment area included the following from the PADEP Short List for Petroleum Products: Leaded Gasoline, Unleaded Gasoline, Diesel Fuel, and Fuel Oil No. 2. In addition, Arcadis performed sampling for VOCs and SVOCs during the due diligence and Act 2 investigation activities.

1.8.2 Tank Containment Area 2

Tank Containment Area 2 formerly included tanks TK-649, TK-1043, and TK-1044 (PADEP IDs 049A, 042A, and 044A, respectively). These tanks historically stored fuel oil No. 2. Sampling requirements in this containment area included Fuel Oil No. 2 from the PADEP Short List for Petroleum Products. In addition, Arcadis performed sampling for lead during the due diligence and Act 2 investigation activities.

1.8.3 Tank Containment Area 3

Tank Containment Area 3 formerly included tanks TK-941, TK-1248, TK-2040, TK-2045, and TK-4847 (PADEP IDs 041A, 048A, 040A, 045A, and 047A, respectively). These tanks historically stored fuel oil no. 2. Sampling requirements in this containment area included Fuel Oil No. 2 from the PADEP Short List for Petroleum Products. In addition, Arcadis performed sampling for lead during the due diligence and Act 2 investigation activities.

1.8.4 Other Site Areas

The truck loading area and paved parking areas to the west of Tank Containment Area 1 were investigated during the Act 2 case. Arcadis performed sampling in these areas for VOCs.

In addition, during the due diligence investigation activities, Arcadis sampled an approximately 20,000- to 25,000-cubic-yard soil pile that was previously located at the Site east of Tank Containment Area 1. The soil pile was sampled following PADEP's Management of Fill Policy, dated January 16, 2021. The samples were analysed for VOCs, SVOCs, polychlorinated biphenyls (PCBs), and total metals.

1.8.5 Impacts due to Historical Fill

As described in Section 1.6, yellow water was discovered leaving the Site in April 2024 by PWD. Heavy rains led to offsite runoff at Bartram's Garden Mile Trail immediately outside the gate at the southeast corner of the Site, and the prescence of yellow water was reported to PADEP. The water was identified in a low lying area along the eastern portion of the site (discussed further in Section 5). As a follow up, Arcadis performed various investigation activities to characerize the water and identify the source. In addition, as an interim immediate measure Alliance constructed soil berms across the low lying area in the southern drainage swale to minimize any discolored water from leaving the Site. Arcadis conducted onsite surface water sampling for VOCs, SVOCs and dyes in April 2024. In addition, field screening of the water for various parameters identified the presence of chromates. Subsequent laboratory analysis identified total and hexavalent chromium in the water.

Following the identification of hexavalent chromium in the surface water, Alliance conducted measures to prevent surface water runoff from leaving the site. In April 2024, Alliance constructed several berms using soil and plastic in the drainage swale that previously had discharged onto the Bartarm's Mile Trail. In July 2024, the berms were fortified with stone rip rap and stone also was placed along the drainage swale. Since the completion and fortification of the berms, no surface water has left the site.

After identifying the presence of total and hexavalent chromium in water, Arcadis reviewed existing soil borings for signs of staining or impacts indicative of chromium. Using this information, Arcadis performed additonal investigation activities including groundwater sampling, soil borings, test pits and temporary wells from May through November 2024. During these investigation activities, historic fill was identified within the Site and on the perimeter of the Site indicating that this general area of Philadelphia had been filled prior to development (see chromium correspondences in Appendix A). Test pits installed within Tank Contaiment Area 1 and on the

southern property boundary identified white/yellow fill material ranging in thickness from a few inches up to approximately 14 feet on the southern property boundary.

From July through September, Arcadis and PADEP collected samples onsite and along the area of Bartram's Garden Mile Trail where staining was observed from the Site to evaluate potential impacts from the previous stormwater runoff. Water samples also were collected from the Schuylkill River. Alliance removed impacted sediments via scraping along the the subject areas in August and September. Following the removal of sediments in September, additional sampling was performed to evaluate other sources of chromium that could be affecting sediments (Figure 4). The sampling identified anthropogenic background sources (i.e. presence of legacy fill material) on the railroad property and along the Bartram's Garden Mile Trail property. In addition, tidal fluctations along the banks of the Schuylkill River were identified as affecting the sediments in the area.

In conjunction with the investigation activities, Arcadis also researched historical records, including topographic maps and aerial photographs, to determine if this area of Philadelphia was historically filled with material, since the presence of chromium is not related to the previous petroleum terminal operations or the historic operations, lumber and cardboard manufacturing, performed at the Site. The historic USGS maps for the Site were reviewed to evaluate the historic filling of the area. Because of the contour interval on the USGS maps, the maps do not show specific filling on the site. However, the presence of the rail line as early as 1891 which is elevated above the surrounding land, indicates that filling occurred in this area along the rail line prior to its construction. The rail line very likely has the same fill material along its embankment as on the Alliance property. The elevated rail line runs along the length of the southern border of the Site which is also parallel to the drainage swale. Stormwater runoff from the rail line discharges onto the site and into the drainage swale. Prior to Alliance's construction of berms, this runoff would have also discharged onto the Bartram's Mile Trail. Also, in comparing USGS maps from 1894 to 1949 it is apparent that wetlands areas to the south of the Site have been filled and roadways were installed, indicating that the areas along the river were filled. In addition, historic aerial photos indicate that filling of the Site occurred prior to the installation of tanks TK-7550 and TK-7551. Aerial photograhs (Appendix C) circa 1920s show a sand and gravel operation and low lying area along the river on what is now Bartram's Garden. At least parts of Bartram's Garden (if not all) were filled after the sand and gravel operations ceased. The aerial photograph also shows the southwest area of the Site which is low lying and receiving runoff from the foundry to the west. This information together with the presence of the yellow/white fill layer identified in the soil along the southern property boundary of the Site indicates that the area was filled in the past.

Based on the investigation activities and research, hexavalent chromium is present in soil and groundwater onsite due to the historical placement of fill onsite and offsite in the early 1900s. The presence of chromium on Bartram's Garden Mile Trail also is expected to be due to historic filling and other contributing factors such as historical river deposits and tidal influence of the river. As shown in historical aerial photographs (Appendix C), the Site was historically in a low lying topographical area and received run-off from the adjacent property occupied by Ryerson Steel. Additional information regarding total and hexavalent chromium onsite and offsite, and associated investigtation and remediation activities is discussed in Section 5.

2. Soil Characterization

In 2021, the prior property owner, PBF Logistics, closed the ASTs with notice to PADEP (PBF Logistics 2021a). PBF Logistics retained Stantec Consulting Services, Inc. (Stantec) to perform the closure activities. As part of the closure activities, PBF Logistics removed all liquids and sludge from the ASTs and lines and then removed the ASTs and lines. After tank and line removal, Stantec sampled soil under the tanks and associated piping. These activities were performed from early August to the end of September 2021. PBF Logistics submitted an AST System Closure Notification Form to PADEP on December 15, 2021 (PBF Logistics 2021a).

In October 2021, prior to the acquisition of the property, Alliance retained Arcadis to perform due diligence investigation activities that included soil and groundwater sampling. Following Alliance's purchase of the property in December 2021, Arcadis performed soil sampling associated with the Act 2 Program and AST case from March 2022 to January 2024. Additional details related to soil sampling are provided in the following sections.

2.1 Sample Collection

In August and September 2021, Stantec performed soil sampling activities in accordance with applicable PADEP AST Closure Guidance, with the exception of the tank bottom sampling conducted at one AST (former tank TK-7551). Stantec initially attempted to collect the tank bottom samples via hand auger after removal of the tank but encountered refusal. Stantec mobilized a mini excavator to collect the tank bottom samples and identified a compacted concrete layer at approximately 2 to 2.5 feet bgs. Stantec then mobilized a full-size backhoe to attempt to collect the tank bottom samples at the prescribed depth of 5 feet bgs, but they again encountered refusal and could not collect the samples. Stantec then contacted PADEP for guidance on collecting the tank bottom samples based on the field conditions and refusal encountered. PADEP agreed that collection of the tank bottom soil samples from just above the concrete layer at the location of former tank TK-7551 was acceptable.

In October 2021, during the due diligence review of the Site, Arcadis performed additional soil sampling activities to delineate impacts identified in the soil from the AST closure sampling and to evaluate the presence of other COCs at the Site. In addition, Arcadis sampled the large soil pile onsite using soil borings and test pits following PADEP's Management of Fill Policy to evaluate the use of the soil as fill at the Site.

In March 2022, Arcadis performed soil sampling in Tank Containment Area 1 to delineate soil exceedances identified during the due diligence sampling activities. Arcadis collected additional soil samples in March and June 2023 to further delineate Tank Containment Areas 1, 2, and 3. During the January 2024 groundwater sampling event, Arcadis collected a final delineation soil sample within Tank Containment Area 1.

The majority of the soil samples collected by Arcadis were from borings installed by Hawk Drilling, Inc. (Hawk), a Pennsylvania-licensed drilling company located in Hampton, New Jersey, using Geoprobe® direct-push drilling techniques. Arcadis collected the test pit soil samples using a backhoe and Encore samplers and collected the delineation soil sample in January 2024 from a boring installed with a hand auger. During the soil sampling, Arcadis personnel screened each boring for the presence of COCs using a PID and visual/olfactory observations. After completion of the soil sampling, Arcadis backfilled the boreholes with the drill cuttings.

In summary, Arcadis and/or Stantec collected 74 soil samples from Tank Containment Area 1, 48 soil samples from Tank Containment Area 2, 88 soil samples from Tank Containment Area 3, and 30 soil samples (including composites) from the other Site areas. The sampling locations are illustrated on Figure 4, and the boring logs are provided in Appendix D.

2.2 Analytical Results

2.2.1 Tank Containment Area 1

Low levels of various VOCs were detected in the samples. With the exception of benzene and naphthalene, the concentrations were less than the representative soil MSCs. The concentrations of benzene that were greater than the MSCs ranged from 0.56 milligram per kilogram (mg/kg) in UNK-ST-N (3 feet bgs) to 1.8 mg/kg in soil borings SB-105 (4.5-5 feet bgs) and SB-213 (4-4.5 feet bgs). The concentrations of naphthalene that were greater than the MSC ranged from 38 mg/kg in soil boring SB-215 (4.5-5 feet bgs) to 1,700 mg/kg in soil boring SB-213 (4-4.5 feet bgs).

Additionally, low levels of SVOCs were detected in the samples. Only biphenyl and bis(2-chloroethyl)ether were detected at concentrations greater than their representative soil MSCs. Biphenyl was detected in soil boring SB-103 (4.5-5 feet bgs) at an estimated concentration of 2.8 mg/kg, and bis(2-chloroethyl)ether was detected in soil boring SB-103 (4.5-5 feet bgs) at 1.2 mg/kg.

Lead was also detected in the AST closure sampling conducted by Stantec at concentrations greater than the PADEP Non-Residential Soil MSCs. The concentrations of lead that were greater than the Non-Residential Soil MSCs ranged from 500 mg/kg at Pipe 81 to 750 mg/kg at Pipe 70.

The soil sampling results for Tank Containment Area 1 are summarized in Tables 1 and 2. The laboratory reports are provided in Appendix G.

2.2.2 Tank Containment Area 2

Low levels of various VOCs and SVOCs were detected in the samples; however, none of the concentrations exceeded the representative soil MSCs.

Lead was detected in various samples. The concentrations of lead that were greater than the representative soil MSCs ranged from 460 mg/kg at Pipe 51 (2 feet bgs) to 2,100 mg/kg at 1044-P4 (3 feet bgs).

The soil sampling results for Tank Containment Area 2 are summarized in Tables 3 and 4. The laboratory reports are provided in Appendix G.

2.2.3 Tank Containment Area 3

Low levels of various VOCs were detected in the samples. With the exception of benzene, the concentrations were below the representative soil MSCs. Benzene was detected at one location, Pipe 29 (2 feet bgs), that exceeded the MSC, with a concentration of 0.66 mg/kg.

Lead was detected in various samples. The concentrations of lead that were greater than the representative soil MSCs ranged from 560 mg/kg at 941-Center (5 feet bgs) to 1,520 mg/kg at Pipe-22 (13-13.5 feet bgs).

The soil sample results for Tank Containment Area 3 are summarized in Tables 5 and 6. The laboratory reports are provided in Appendix G.

2.2.4 Other Site Areas

The samples collected from the soil pile had some detections of VOCs, SVOCs, PCBs, and metals. However, no concentrations were greater than the PADEP Non-Residential Soil MSCs.

Low levels of various VOCs were detected in the samples collected from the truck loading area and paved parking areas to the west of Tank Containment Area 1. With the exception of benzene, the concentrations were below the representative soil MSCs. The concentrations of benzene that were greater than the Non-Residential Soil MSCs ranged from 0.59 mg/kg in soil boring SB-204 (8.5-9 feet) to 2.6 mg/kg in soil boring SB-202 (8.5-9 feet).

The soil sampling results for these other Site areas are summarized in Tables 7, 8 and 9. Soil sampling locations with MSC exceedances are presented on Figure 7. The laboratory reports are provided in Appendix G. Soil sampling that was conducted to address total and hexavalent chromium is further discussed in Section 5.

2.3 Conclusions

The soil investigation activities in the tank containment areas, truck loading area, and paved areas west of Tank Containment Area 1 identified benzene, naphthalene, lead, biphenyl, and bis(2-chloroethyl)ether at concentrations greater than the PADEP Non-Residential Soil-to-Groundwater screening values. Only two concentrations, lead in Area 3 (Pipe 22 at 2 feet bgs in August 2021) and naphthalene in Area 1 (soil boring SB-213 at 4 to 4.5 feet bgs in March 2022), were also greater than their respective Direct Contact screening values. The extent of each concentration was delineated horizontally and vertically to the water table. It is currently proposed that an EC and engineering controls will be used to address the exceedances, as discussed in Section 9.

The samples collected from the soil pile had some detections of VOCs, SVOCs, PCBs, and metals. However, no concentrations were greater than the PADEP Non-Residential Soil MSCs. During the recent redevelopment activities, some of the large soil stockpile has been distributed across the Site to fill and grade the former tank containment areas and construct berms to prevent offsite stormwater run-off. Soil containing COCs will be moved to a location beneath the proposed warehouse building when redevelopment activities resume onsite, as discussed further in Section 9.

3. Groundwater Characterization

In October 2021, groundwater investigation activities were initiated at the Site as part of due diligence activities. Later, as part of the Act 2 investigation activities, Hawk rehabilitated one existing monitoring well onsite and installed three additional permanent monitoring wells under Arcadis supervision. Following installation of the monitoring wells, Arcadis sampled the existing and newly installed wells during eight quarterly events from April 2022 to January 2024. Additional sampling related to chromium began in April 2024, as discussed in Section 5.

3.1 Temporary Well Installation and Sampling

3.1.1 Sample Collection

On October 22, 2021, Arcadis supervised the installation of five temporary monitoring wells (TW-1, TW-2, TW-3, TW-4, and TW-5) at the Site. Hawk installed the temporary monitoring wells using Geoprobe direct-push drilling techniques to investigate whether the exceedances of the PADEP Non-Residential Soil-to-Groundwater screening values in soil samples had resulted in groundwater impacts. Temporary wells TW-1 to TW-3 were installed at the locations where the highest soil concentrations had been detected for each constituent during the AST closure activities. Temporary well TW-1 was installed at previous soil sampling location 7551-P6, TW-2 was installed at soil boring location 2040-P2, and TW-3 was installed in the vicinity of Pipe 7 and Pipe 8. Temporary wells TW-4 and TW-5 were installed along the anticipated downgradient Site boundary (Figure 4).

Hawk installed each well, with the exception of TW-1, to a depth of 15 feet bgs. Well TW-1 was installed to a depth of 10 feet bgs due to a shallower depth to groundwater. The wells were constructed with 10 feet of 1-inch pre-packed slotted screen installed between 5 and 15 feet bgs (TW-1 was screened from grade to 10 feet bgs), and 1-inch riser installed from 5 feet bgs to grade.

During the installation of the temporary wells, Arcadis personnel screened each boring for the presence of COCs using a PID and visual/olfactory observations. TW-1 had elevated PID readings as high as 550 parts per million as well as petroleum odors. The remaining temporary wells showed no signs of obvious contamination or odors, and the PID readings were minimal. Groundwater was encountered at a depth ranging from approximately 3 feet bgs in TW-1 to 13 feet bgs in TW-3.

Arcadis collected groundwater samples from the temporary wells using a peristaltic pump and dedicated tubing. The wells were purged prior to sampling, and typical field parameters, including but not limited to pH, oxidation-reduction potential (ORP), temperature, turbidity, dissolved oxygen, and specific conductance, were recorded for the wells. Arcadis collected samples after the water quality parameters had stabilized. Samples collected for metals analysis were field filtered with a 0.5-micron filter. During the sampling activities, the groundwater in TW-1 and TW-5 was yellow in color, even after the samples were filtered, and it had a slight odor. It was not possible to sample TW-4 because the well did not produce water over a 72-hour time period. The samples were submitted on ice and under chain-of-custody protocol to a Pennsylvania-certified laboratory for analysis for VOCs and lead.

Following the completion of the well sampling, Arcadis removed the temporary well screens and risers and backfilled the borings with the drill cuttings. The sampling locations are illustrated on Figure 4, and available well construction logs are provided in Appendix D. Monitoring well purge and sampling logs are provided in Appendix H.

3.1.2 Analytical Results

The VOC analyses identified low levels of various compounds in temporary wells TW-2, TW-3, and TW-5. The concentrations were less than the Non-Residential Used Aquifer Groundwater MSCs. In TW-1, benzene was detected at a concentration greater than the MSC. Benzene was detected in the initial analysis at 65 micrograms per liter (µg/L) and in the contingent analysis at 66 µg/L. Both concentrations exceeded the groundwater MSC of 5 µg/L. The concentration of benzene in the other temporary wells ranged from an estimated 0.24 µg/L in TW-3 to 0.32 µg/L in TW-5.

The analysis for filtered lead identified concentrations ranging from an estimated 0.3553 µg/L in TW-5 to 9.312 µg/L in TW-2. The initial analysis of the sample from TW-2 for lead identified an estimated 0.9818 µg/L, but the contingent analysis identified 9.312 µg/L, which is greater than the groundwater MSC of 5 µg/L.

The sampling results for the temporary wells are summarized in Table 10. The laboratory reports are provided in Appendix G.

3.2 Monitoring Well Installation and Sampling

Monitoring wells MW-1 through MW-6 were installed by PBF Logistics (Figure 4). Well construction logs were not available, and screened intervals presented in Table 11 for these wells were determined based on a visual survey utilizing a downhole camera. An estimated depth to top of screen was derived by using the surveyed elevations and the measurements from the camera survey to determine where the well screen started.

3.2.1 Monitoring Well Installation

On March 16, 2022, under the supervision of Arcadis, Hawk installed three additional permanent monitoring wells (MW-7, MW-8, and MW-9) at the Site to determine groundwater flow across the Site and to characterize groundwater conditions. Monitoring well MW-7 was installed in the vicinity of TW-1, adjacent to former tank TK-7551, to further assess the benzene concentrations in this area. Monitoring well MW-8 was installed upgradient of monitoring well MW-7 along the western Site boundary. Monitoring well MW-9 was installed along the southeastern Site boundary in the anticipated downgradient direction of temporary well TW-2.

Monitoring wells were installed using a hollow-stem auger drill rig with 8-inch augers. The total depth of the monitoring wells was determined by the depth of groundwater observed at each location during the drilling activities. The total depths of the monitoring wells ranged from 15 feet bgs at monitoring well MW-7 to 22 feet bgs at monitoring well MW-8. The monitoring wells were completed with between 12 and 17 feet of 0.010 2-inch-diameter polyvinyl chloride (PVC) slotted screen set across the water table. Two-inch PVC risers were installed to the ground surface. A filter pack consisting of No. 2 sand was placed in the annular space around the monitoring well screens, and a 2-foot bentonite seal was installed over the top of the filter pack. A grout slurry was installed on top of the bentonite seal to fill the annular space to the ground surface. A flush-mount steel manhole and concrete pad were installed to complete the monitoring well at ground surface. The monitoring wells subsequently were developed by pumping and surging until the water was free of fine particles. In addition, existing monitoring well MW-5, which could not be sampled during the due diligence activities, was re-developed and cleared of sediments such that it could be sampled during subsequent events.

Following installation, DPK Consulting, a Pennsylvania-licensed surveying company located in Middlesex, New Jersey, surveyed the new monitoring wells and the existing monitoring wells. A summary of available construction details for the monitoring wells is provided in Table 11. Available survey details are presented in Appendix E**.**

3.2.2 Sample Collection

During the due diligence field activities conducted in October 2021, Arcadis identified six permanent monitoring wells at the Site. Four monitoring wells (MW-1 through MW-4) were found to be functioning and were sampled. It was not possible to sample two monitoring wells (MW-5 and MW-6). Monitoring well MW-5 was dry when gauged, and PBF Logistics had previously abandoned monitoring well MW-6. The four functioning monitoring wells were sampled to assist in evaluating groundwater conditions.

Following the installation of the new permanent wells as part of the Act 2 investigation activities, Arcadis initiated quarterly groundwater monitoring at the Site in April 2022. Eight Site-wide quarterly sampling events were completed, with the most recent performed in January 2024.

During each groundwater sampling event, Arcadis collected the samples using the United States Environmental Protection Agency (USEPA) low-flow sampling techniques. Prior to beginning the groundwater sampling activities, Arcadis gauged groundwater levels to determine the groundwater flow direction. The monitoring wells then were purged at a rate of approximately 0.1 gallon per minute with a submersible centrifugal pump (ProActive Steel Monsoon Pump™ or equivalent). Water quality parameters, including temperature, pH, conductivity, dissolved oxygen, ORP, and turbidity, were collected using a Horiba U-52 water quality meter and flow-through cell every 5 minutes. After the water quality parameters had stabilized, the tubing was disconnected from the Horiba U-52, and the samples were collected. The monitoring well purge logs are provided in Appendix H.

The groundwater samples were submitted under chain-of-custody protocol to Alpha Analytical, a Pennsylvania-certified laboratory, for analysis. The groundwater samples from the 2021 due diligence activities were analyzed for VOCs and SVOCs. The groundwater samples from the Act 2 investigation were analyzed for VOCs and lead. Quality assurance/quality control samples consisted of the collection of one duplicate sample, one field blank, and one trip blank.

3.2.3 Analytical Results

No SVOCs were detected in groundwater during the monitoring well sampling performed in 2021 as part of the due diligence activities. Low levels of VOCs were detected, but concentrations were less than their respective groundwater MSCs.

With the exception of benzene and naphthalene, low levels of VOCs were detected in groundwater at concentrations less than the groundwater MSCs during the Act 2 quarterly monitoring. Benzene was detected in one monitoring well (MW-7) at concentrations greater than the MSC of 5 µg/L. The concentrations of benzene in downgradient monitoring wells MW-1 and MW-2 were consistently less than the MSC.

During two sampling events (April 2022 and April 2023), naphthalene was detected in groundwater sampled from monitoring well MW-9 at concentrations of 150 µg/L and 120 µg/L, respectively, which were greater than the groundwater MSC of 100 µg/L. In the other monitoring events, the naphthalene concentration was less than the MSC.

Lead also was detected in monitoring well MW-9 at concentrations greater than the groundwater MSC of 5 µg/L. The concentrations ranged from 15.33 µg/L to 65.15 µg/L and decreased during the monitoring period. The concentrations of lead in the other onsite monitoring wells were less than the groundwater MSC.

COCs present at concentrations greater than their respective MSCs during the most recent quarterly Site-wide event (January 2024) are presented on Figure 8 (benzene) and Figure 9 (filtered lead).

Total and hexavalent chromium were incorporated into groundwater sampling in 2024 and are also present at concentrations greater than the MSC of 100 µg/L. Groundwater isopleths for filtered total chromium and filtered hexavalent chromium from the last sampling event (November 2024) are presented on Figure 10 and Figure 11, respectively. Sampling for total and hexavalent chromium is ongoing. Section 5 provides additional information related to chromium sampling and analysis.

The monitoring well sampling results are summarized in Table 12. The laboratory reports are provided in Appendix G.

3.3 Groundwater Statistical Analysis

To evaluate dissolved-phase COC concentrations, Mann-Kendall (MK) trend analyses were performed on groundwater quality data following USEPA (2002, 2009) guidance. The MK trend test is a nonparametric test that identifies trends based on ranked data and is useful where large variations in the magnitude of concentrations may be present and otherwise influence a time-series trend analysis. The basic MK trend test involves listing the concentrations in temporal order and computing differences between a given measurement and earlier measurements. The test statistic (sum of trend) is the difference between the number of strictly positive differences and the number of strictly negative differences. If there is an underlying increasing trend, these differences will tend to be positive, indicated by a sufficiently large positive value of the test statistic. The p-value of the correlation provides a measure of the level of significance of the statistical test. Correlations are considered significant for p-values less than or equal to 0.05 (95 percent confidence level).

To be conservative, COC concentration trends in groundwater were evaluated at monitoring well locations with eight sampling events that exhibited a detected concentration of a COC greater than the MSC at least once since quarterly monitoring began in April 2022.

MK trends were run for the following:

- Benzene in monitoring well MW-7; and
- Naphthalene and filtered lead in monitoring well MW-9.

MK trends will be performed on total and hexavalent chromium following receipt of the next quarter of results.

A downward trend was confirmed in monitoring well MW-9 for lead. The analyses for benzene and naphthalene exhibited no significant trend. The Mann-Kendall graphs are provided in Appendix I.

3.4 Groundwater Fate and Transport Analysis

PADEP's Quick Domenico (QD) modeling tool was used to evaluate the downgradient extent of COCs in groundwater at concentrations greater than their respective MSCs during at least one sampling event. The QD model (Domenico 1987) calculates the concentration of a constituent in groundwater at any time and distance downgradient of a source area of known size for a plume traveling through unconsolidated saturated soil. The advection-based groundwater flow model allows for three-dimensional dispersion, first-order decay, and retardation. The model assumes a constant source, which typically results in the overestimation of plume size. Input parameters used in the model, and rationale for using those parameters, are provided in Appendix J. Default and literature values were used as inputs if site-specific information was not available, as detailed in Table J-1 of Appendix J.

Models were completed for lead, naphthalene, benzene, and hexavalent chromium. Maximum concentrations were used in the model, and monitoring wells with the highest concentrations were used as source wells in the model. Models were calibrated using field data where available and as appropriate. Total chromium was not modeled, as most or all the chromium appears to be hexavalent, and the modeling of the hexavalent chromium provides the worst-case scenario for chromium in groundwater.

The model determined that COCs would travel the following distances before achieving concentrations at or less than groundwater MSC.

- Lead: 105 feet from monitoring well MW-9;
- Naphthalene: 22 feet from monitoring well MW-9;
- Hexavalent chromium: 430 feet from monitoring well MW-4, and 420 feet from monitoring well MW-7; and,
- Benzene: 265 feet from monitoring well MW-7.

Modeled extents of benzene, lead, and hexavalent chromium at concentrations greater than their respective MSCs are presented on Figure 12. COCs modeled from monitoring well MW-9 and MW-4 are expected to travel parallel to the southern Site boundary and the rail line, toward monitoring well MW-3. Lead and naphthalene are expected to attenuate prior to reaching monitoring well MW-4, which is consistent with field data. Hexavalent chromium is expected to attenuate several hundred feet prior to reaching monitoring well MW-1. COCs modeled from MW-7 are expected to generally travel toward monitoring well MW-2. Benzene and hexavalent chromium are expected to attenuate from this portion of the Site at least 200 feet prior to reaching the downgradient Site boundary. Based on observed groundwater flow directions onsite, Site COCs in groundwater are not expected to travel beyond the site boundaries or reach the Schuylkill River. The results of the modeling activities are discussed in more detail in Appendix J.

3.5 Conclusions

Eight quarterly groundwater monitoring events were performed from April 2022 to January 2024 for Site-related COCs (except total and hexavalent chromium). Only three COCs were detected at concentrations greater than their respective PADEP Non-Residential Used Aquifer Groundwater MSCs during quarterly monitoring. Benzene was detected in groundwater sampled from one monitoring well (MW-7), located in Tank Containment Area 1, at concentrations greater than the MSC during each sampling event. Benzene concentrations remained relatively stable throughout the monitoring program. The concentrations of benzene in groundwater sampled from downgradient monitoring wells MW-1 and MW-2 were less than the groundwater MSC.

Naphthalene was detected in groundwater sampled from one monitoring well (MW-9), located in Tank Containment Area 3, at a concentration greater than the groundwater MSC during two sampling events. The concentrations remained relatively stable throughout the monitoring program. The concentrations in the last three sampling events were less than the MSC.

In addition, lead was detected in groundwater in monitoring well MW-9 at concentrations greater than the groundwater MSC in each of the sampling events. A downward trend in concentration was identified during the monitoring program. The concentrations of lead in groundwater sampled from downgradient monitoring well MW-4 were less than the groundwater MSC. Lead concentrations do not extend offsite onto the adjacent railroad property.

Total chromium and hexavalent chromium were added to the COC list in May 2024 and included in sample analysis from monitoring wells MW-3, MW-4, MW-7, and MW-9 due to the yellowish water observed at these locations during

previous sampling events where chromium was confirmed to be present through field testing. Following the May 2024 event, the rest of the onsite monitoring wells were included in the sampling program. Total chromium and/or hexavalent chromium is present in concentrations greater than MSCs in monitoring wells MW-3, MW-4, MW-7, and MW-9. The chromium investigation is further discussed in Section 5.

It is currently proposed that an EC will be used to address the groundwater exceedances. Exposure pathways and controls related to groundwater are discussed in Section 7 and Section 9, respectively. Groundwater attainment is discussed in Section 9.5.

4. Soil Gas Investigation

4.1 Sample Collection

On May 25, 2022, Arcadis installed seven temporary soil gas sample points (SG-1 through SG-7) at the Site to investigate the presence of elevated PID readings and odors in the soil gas in the footprint of the proposed building.

The soil gas sample points were installed to a depth of 3 to 5 feet bgs, depending on the depth to groundwater in each of the borings. Each point was installed via manual direct-push techniques utilizing a slide hammer. A stainless-steel screen was deployed at the bottom interval, and ¼-inch-diameter Teflon™ tubing was connected to the screen and extended above grade.

Arcadis purged an approximately 200-milliliter volume from each soil gas sample point utilizing a pump set for low-flow purging. After purging, the valves on the Summa canisters were opened, and initial and final vacuum readings were recorded. Soil gas samples were collected using 2.7-liter Summa canisters with pre-set, laboratory-supplied, 15-minute flow regulators. After the collection of the soil gas samples, the stainless-steel screen and Teflon tubing were recovered, and the holes were backfilled with the cuttings. Soil gas sampling logs are included in Appendix H.

The soil gas Summa canisters were delivered under chain-of-custody protocol to Alpha Analytical, a Pennsylvania-certified laboratory, for analysis for VOCs via USEPA Method TO-15.

4.2 Analytical Results

Low levels of various VOCs were detected in soil gas samples. With the exception of benzene at one location, the concentrations were less than the PADEP Non-Residential Sub-Slab Soil Gas VI SVs. In soil gas sample point SG-5, benzene was detected at 4,340 micrograms per cubic meter (µg/m^3), which exceeds the Non-Residential Sub-Slab Soil Gas VI SV of 2,000 µg/m^3.

In addition, because it is proposed to use SSS soil remediation standards for benzene and naphthalene, the soil gas concentrations were evaluated relative to 1/10^{th} the VI SV for these compounds. The concentrations of naphthalene were less than the Site-Specific Sub-Slab Soil Gas VI SV. The benzene concentration in soil gas sample point SG-5 was greater than the Site-Specific Sub-Slab Soil Gas VI SV of 200 µg/m^3. The concentrations of benzene in the other samples were less than the Site-Specific VI SVs.

Samples from soil gas sample points SG-5, SG-6, and SG-7 had elevated method detection limits (MDLs) for several constituents as presented in Table 13, due to the dilution required by the elevated concentrations of non-target compounds in the samples. These non-target compounds are likely the source of the PID readings and odors observed during the soil sampling activities.

The sample results for the soil gas sample points are summarized in Table 13. The laboratory report is provided in Appendix G.

4.3 Conclusions

Only benzene was detected in soil gas in one location (soil gas sample point SG-5) at a concentration exceeding the Site-Specific Non-Residential VI SVs. Additional non-detected MDLs and reporting limits (RLs) were also

greater than the VI SVs. While only one round of soil gas samples was collected, a remedy will be implemented to address the pathway. Therefore, additional sampling is not warranted at this time.

Soil gas sample point SG-5 is in an area that is proposed to receive fill to bring the final grade up to the required elevation for redevelopment of the Site. In addition, as part of the warehouse construction, a passive SSDS will be installed as a proactive VI mitigation measure to address soil beneath the building that contains concentrations above the VI SVs. The Cleanup Plan is presented in Section 9.

5. Chromium Investigation

Following the discovery of yellow standing water at and adjacent to the Site in April 2024, Arcadis conducted an investigation for total and hexavent chromium that consisted of soil, seasonal standing water, surface water, and groundwater sampling activities. Sampling activities were focused onsite and offsite along Bartram's Garden Mile Trail receiving runoff from the drainage swale leaving the Site, where the presence of yellow water was discovered and reported to PADEP. Alliance and PADEP worked collectively to evaluate chromium in media in the area, and PADEP was informed of proposed activities and results as they became avaiable (Appendix A). Chromium investigation sampling activities consisted of the following:

- In April 2024, yellow water was discovered leaving the Site. As discussed in Section 1.6, Arcadis initially collected surface water samples (from standing pools of yellow water onsite) for analysis of VOCs, SVOCs and common fluorescent dyes (such as fluorescein, eosine, rhodamine WT, sulforhodamine B, and pyranine). The samples for VOCs and SVOCs were analyzed by Pace and the samples for dyes were analyzed by Ozark Underground Laboratory of Protem, Missouri. No VOCs other than a low level of acetone were detected in the samples. Similarly, only estimated concentrations below laboratory reporting limits of bis(2-ethylhexyl) phthalate, benzo(b)fluoranthene, and benzo(k)fluoranthene were detected in the SVOC analyses. No flourescent dyes were detected. A certificate of laboratory analysis are provided in Appendix G. Additonally, Arcadis performed some field screening tests where the presence of (hexavalent) chromate was identified. Arcadis subsequently sampled the pooled surface water in the low-lying areas onsite for chromium analyses.
- In May and June 2024, Arcadis collected total and hexavalent chromium samples from select monitoring wells onsite. Soil borings and temporary wells also were installed and sampled for total and hexavalent chromium.
- In July 2024, Arcadis installed test pits located along the southern Site boundary and sampled these for total and hexavalent chromium. Later in July, Arcadis and PADEP collected split samples for analysis to Pace (Alpha Analytical) of Mansfield, Massachusetts. Soil samples were collected along Bartram's Garden Mile Trail, and surface water split samples were collected from the Schuylkill River (Figure 4 and Figure 13). The samples were anlayzed for VOCs, SVOCs, metals, and total and hexavalent chromium.
- On July 30, 2024, a revised NIR was submitted to PADEP to indicate a combination of standards and include total chromium and hexavalent chromium on the COC list (Alliance 2024).
- In August 2024, Arcadis collected surficial soil samples onsite and sampled all monitoring wells for total and hexavalent chromium. Arcadis and PADEP recollected split samples in three locations and collected additonal split soil samples along Bartram's Garden Mile Trail. Split surface water samples were also collected from standing water pools onsite.
- In September 2024, Arcadis collected additional soil samples along Bartram's Garden Mile Trail, focusing on upgradient areas and sources not related to the Site.
- In November 2024, Arcadis sampled monitoring wells onsite for total and hexavalent chromium. During preparation of this RIR/Cleanup Plan, four rounds of groundwater have been collected (January, May, August, and November 2024) for total and hexavalent chromium analysis. Three of these (May 2024 to November 2024) have been consecutive quarters, and the fourth quarter event will be conducted in February 2025. PADEP has indicated that sampling can potentially cease after four quarterly events, pending results.

- In January 2025, additional chromium soil delineation sampling was completed, as discussed in the following section.

With the exception of the September 2024 soil sampling event, where samples were submitted to Eurofins Lancaster Laboratories Environmental Testing, LLC (Eurofins) of Lancaster, Pennsylvania, samples were submitted to Pace (Alpha Anayltical) for analysis of total chromium via USEPA Method 16010D (soil) and 6020B (soil and water) and for hexavalent chromium via USEPA Method 7196A (soil and water). Due to the discrepancies in analytical results for early samples collected by PADEP compared to those collected by Arcadis, the September soil samples collected by Arcadis utilized the same laboratory as PADEP for the analyses (Eurofins) to reduce any discrepancies.

Sampling details and analytical results are provided in the following sections.

5.2 Soil Sampling for Chromium

PADEP and Arcadis collectively performed soil sampling activities as described in the following sections.

5.2.1 Sample Collection

As described previously, soil samples were collected from May to September 2024 from various locations across the Site and along Bartram's Garden Mile Trail. Sampling locations are presented on Figure 4.

5.2.1.1 Onsite

On May 30 and June 7, 2024 Arcadis collected soil samples from 16 soil borings ranging in depths from 3 feet to 15 feet bgs around the Site. During previous Site investigation activities, two locations, soil borings SB-206 and SB-209, were found to have yellowish staining and were resampled and analyzed for total and hexavalent chromium during this event. The remaining 14 locations (soil borings SB-501 through SB-514) were chosen to delineate the extent of chromium-impacted soils. The soil borings were advanced under Arcadis supervision by Hawk, using Geoprobe® direct-push drilling techniques and soil samples were collected in 6-inch intervals from the Geoprobe® core using a plastic trowel.

On July 3, 2024, Arcadis directed the excavation of five test pits along the southwestern Site boundary. The test pits were advanced by Alliance's site redevelopment contractor, ARCO Construction Company Inc., and were installed for visual inspections for yellow-stained soils. Test pit depths ranged from 7 feet bgs in TP-101 and TP-102 to 17 feet bgs in TP-105. Yellow staining was found in all test pits and ranged in thickness from 1 foot in TP-101 to 14 feet in TP-105. After the completion of the visual inspections, the test pits were backfilled with original soil.. Test pit logs are included in Appendix D.

On August 2, 2024, at the request of PADEP, Arcadis collected 10 surficial soil samples from a depth of 0-0.5 feet bgs around the Site. Previously installed soil borings with elevated chromium detections at depth (SB-206, SB-209, SB-216, SB-503, SB-503, and SB-504) were revisited to collect surficial samples. Additionally, the four remaining locations, S-601 through S-604, were selected for further delineation.

On January 8, 2025, Arcadis collected eighteen samples from nine soil borings. The borings were advanced under the supervision of Arcadis by Hawk using Geoprobe® direct-push drilling techniques. Elevated chromium from a surficial soil sample from S-604 required the location to be delineated vertically and horizontally. Soil boring SB-604 was installed at the S-604 location. The additional delineation borings, SB-701 through SB-708, were installed to further delineate chromium both horizontally and vertically. Except for soil boring SB-604, samples were collected from each boring at the surface and at the 6-inch interval above the water table which

ranged from 6 feet to 7.5 feet bgs. The sample at soil boring SB-604 was collected only at the interval above the water table. Additionally, yellow-stained soil was identified in soil boring SB-705, so an additional sample was collected from the stained soil.

5.2.1.2 Bartram's Garden Mile Trail

On July 22 and August 13, 2024, PADEP and Arcadis collected 21 discrete split soil samples using a trowel and stainless-steel bowl at the locations presented on Figure 4 along Bartram's Garden Mile Trail near the Site. Locations along the trail were selected by PADEP. The locations were biased towards low-lying areas and around drainage holes in the river side wall. During these sampling events, soil was collected at each location using a dedicated plastic sampling trowel. Once enough volume was collected, each location was homogenized to help create an accurate split sample.

During the July 2024 event, PADEP also analyzed its samples for VOCs, SVOCs and other metals, so Arcadis analyzed for those constituents in its split samples as well. Site-related COCs that were analyzed are included in Table 14b for completeness. If a constituent was never detected onsite and was therefore not retained as a Site-related COC, it was not tabulated this RIR/CP; laboratory analytical reports for samples collected by Arcadis, with all constituents reported, are included in Appendix G.

Alliance removed soil or sediment at sample points with hexavalent chromium at concentrations greater than the residential MSC of 35 mg/kg along Bartram's Garden Mile Trail via scraping. Then, Arcadis sampled from the same geographic locations sampled previously, utilizing the same sampling methods for consistency.

In September 2024, Arcadis resampled five locations after Alliance removed additional soil or sediment along Bartram's Garden Mile Trail. Arcadis also sampled additional locations along Bartram's Garden Mile Trail at elevations that would not be impacted by surface water run-off from the Site. Samples S-18, S-19, and S-20 were collected from the southern slope of the railroad embankment, while samples S-22 and S-23 were collected from the northern slope of the railroad embankment. On the eastern side of the trail, an elevated mound of soil was sampled as S-21. Additionally, Arcadis resampled locations DEP51-S3, DEP51-S5, DEP51-S6, DEP51-S8A, and DEP51-S16. Sample collection methodology remained consistent with that of previous sampling events along Bartram's Garden Mile Trail.

5.2.2 Analytical Results

During Site investigations conducted before the discovery of chromium impacts, some sampling locations were analyzed for inorganic constituents. Upon initiation of the chromium investigation, the laboratory was able to retrieve and report total chromium results for 13 samples previously analyzed for other inorganics. These historical retrieved analytical results as well as the recent chromium investigation soil analytical results, are presented in Table 14a for onsite locations and Table 14b for Bartram's Garden Mile Trail locations. As noted above, PADEP evaluated its samples for additional analytes; any Site-related COCs are tabulated in Table 14b.

5.2.2.1 Onsite

Total chromium was identified in the 13 samples from previous Site investigations except for the one from 2040-P2 (4.5-5 feet), where it was not detected above the MDL. Only the sample from 1043-P4 (7.5-8 feet) at 200,000 mg/kg exceeded the Non-Residential Soil-to-Groundwater MSC.

During the May-June 2024 sampling, revisited soil borings SB-206, SB-209, and SB-216 had exceedances greater than the soil MSC for hexavalent chromium at detections of 27,900 mg/kg, 11,300 mg/kg, and 15,000 mg/kg, respectively. These locations also had detections of total chromium; however, none exceeded the soil

MSC. The reminder of the samples had exceedances of hexavalent chromium greater than the soil MSC in soil borings SB-501 (4.5-5 feet), SB-502 (4.5-5 feet), and SB-511 (11-11.5 feet) at concentrations of 5,010 mg/kg, 12,300 mg/kg, and 8,130 mg/kg, respectively. As with the other samples, total chromium was detected but did not exceed the soil MSC.

Surficial samples collected in August 2024 had exceedances of hexavalent chromium of 259 mg/kg, 1,660 mg/kg, 279 mg/kg, and 5,710 mg/kg in samples S-209, S-216, S-502, and S-604, respectively. Additionally, total chromium was also detected in all of the event's samples; however, none exceeded the soil MSC.

During January 2025 soil sampling event, previous surficial sample location S-604, was sampled as SB-604 to delineate hexavalent chromium at depth. SB-604 (7.5-8) did not have any detections of hexavalent chromium. The reminder of the samples had exceedances of hexavalent chromium greater than the soil MSC in soil borings SB-703 (0-0.5 feet), SB-703 (5.5-6 feet), SB-705 (0-0.5 feet) and SB-705 (3.5-4 feet) at concentrations of 690 mg/kg, 4,090 mg/kg, 1,730 mg/kg and 5,430 mg/kg, respectively. Additionally, total chromium was detected but did not exceed the soil MSC in all the samples.

Figure 7 presents the results and soil sampling locations where total and hexavalent chromium were greater than their respective MSCs onsite.

5.2.2.2 Bartram's Garden Mile Trail

Samples collected along Bartram's Garden Mile Trail from July through September 2024 showed detections of total chromium and hexavalent chromium, although no sample exceeded the soil MSC. Various sampling locations were remediated by Alliance. Impacted sediments at sample locations DEP51-S3, DEP51-S5, DEP51-S6, DEP51-S-7, DEP-51-S8/8A, and DEP51-S9, shown on Figure 4, have since been removed from the trail sampling locations with agreement of PADEP.

All samples collected from locations DEP51-S5, DEP51-S6, and DEP51-S8/8A had low level detections of hexavalent chromium and total chromium after clean-up efforts. This shows that the sample locations are being affected by anthropogenic background conditions. The Schuylkill River deposits impacting sediments along the tidally influenced areas of Bartram's Garden Mile Trail. Additionally, samples collected at elevated grade levels along the railroad embankment and under the railroad bridge, that surface water run-off from the Site would not reach, had detections of total and hexavalent chromium, indicating that there is a broader impacted area that is not Site related.

5.3 Surface Water Sampling for Chromium

PADEP and Arcadis collectively performed surface water sampling activities as described in the following sections. Water samples were analyzed for total and filtered total chromium via USEPA Method 6020B, and for total and filtered hexavalent chromium via USEPA Method 7196A.

5.3.1 Sample Collection

Arcadis collected a sample from the onsite standing water during the initial chromium investigation in April 2024 (SW-1). PADEP and Arcadis also collected four split surface water samples: two from the Schuylkill River and two from onsite seasonal standing water. These locations are presented on Figure 4 and Figure 13.

5.3.1.1 Schuylkill River

On July 22, 2024, Arcadis and PADEP collected four surface water samples from the Schuylkill River. The locations were selected by PADEP personnel. Two locations were sampled in the river along Bartram's Garden Mile Trail where the soil sampling occurred, and one sample was collected both upriver and downriver from the soil sampling locations. Each location was sampled using a dedicated polyethylene bailer.

5.3.1.2 Onsite Seasonal Standing Water

On April 29, 2024, during the initial chromium investigation, Arcadis collected a sample from a seasonal standing water pool onsite. This sample was also analyzed for the presence of VOCs, SVOCs, and fluorescent dyes (fluorescein, eosine, rhodamine WT, sulforhodamine B, and pyranine). The sample was collected utilizing a dedicated polyethylene sampling cup.

On August 13, 2024, Arcadis and PADEP collected two split surface water samples from the same seasonal standing water pool that was previously sampled by Arcadis in April 2024. A sample was collected on both the eastern and western side of the pooled water, as directed by PADEP. Each location was sampled using a dedicated polyethylene sampling cup.

5.3.2 Analytical Results

Table 15 presents the results of surface water sampling for chromium in comparison to the PADEP Chapter 93 Surface Water Quality Criteria.

Site-related COC (which are constituents that were detected at least once in onsite soil or groundwater samples) results that are available for surface water samples are included in Table 15 for informational purposes. If a constituent was never detected onsite and was therefore not retained as a Site-related COC, it was not tabulated, but laboratory analytical reports for samples collected by Arcadis are included in Appendix G.

5.3.2.1 Schuylkill River

Hexavalent chromium was not detected in any surface water samples collected along the Schuylkill River. Only estimated total and filtered chromium concentrations were detected in all the samples.

5.3.2.2 Onsite Seasonal Standing Water

During the initial chromium investigation in April 2024, total chromium was detected at 21,560 ug/L in standing water sample SW-1 (Figure 13) from the onsite drainage swale. However, at that time, the sample was not analyzed for hexavalent chromium. Additionally, none of the dyes analyzed were detected in the sample.

In August 2024, hexavalent chromium was detected at concentrations of 19,600 ug/L and 28,000 ug/L in samples DEP51-W5-240813 and DEP51-W6-240813, respectively. These samples are in the same drainage swale as sample SW-1 (Figure 13). . While these results are presented in Table 15, Surface Water Quality Criteria is not applicable to standing water samples that are not in a surface water body.

5.4 Quarterly Groundwater Sampling for Chromium

In May 2024, total chromium and hexavalent chromium were added to the groundwater analytical suite. The May 2024 event only included select monitoring wells (MW-3, MW-4, MW-7, and MW-9) for analyses of total chromium and hexavalent chromium, as agreed upon by PADEP.

Following the May 2024 event, two additional events (August 2024 and November 2024) were conducted for total and hexavalent chromium in all onsite wells. The fourth consecutive quarterly event is planned for February 2025.

5.4.1 Sample Collection

During each groundwater sampling event, Arcadis collected the samples using low-flow sampling techniques. Prior to beginning the groundwater sampling activities, Arcadis gauged groundwater levels to determine the groundwater flow direction. The monitoring wells then were purged at a rate of approximately 0.1 gallon per minute with a submersible centrifugal pump (ProActive Steel Monsoon Pump™ or equivalent). Sampling was conducted upon stabilization of water quality parameters.

During the August 2024 groundwater sampling event, it was discovered that monitoring well MW-2 was damaged and required repairs in order for the well to be sampled. Monitoring well MW-2 was subsequently sampled in early October 2024 after repairs were completed.

The monitoring well purge logs are provided in Appendix H.

5.4.2 Analytical Results

With PADEP agreement, the groundwater MSC for chromium (100 µg/L) was used to screen both total chromium and hexavalent chromium results in groundwater. Filtered results for each sample were considered representative of groundwater conditions. Unfiltered metals concentrations are considered more representative of sediment that is bound to water molecules. Analytical results are included in Table 12. A discussion of filtered results follows.

In May 2024, chromium and hexavalent chromium were present at concentrations greater than the groundwater MSC in all monitoring wells sampled (MW-3, MW-4, MW-7, and MW-9).

In August 2024, chromium was detected in groundwater from all monitoring wells sampled; however, only MW-3, MW-4, MW-7, and MW-9 exceeded the groundwater MSC. Hexavalent chromium was also detected in all monitoring wells sampled and was present at concentrations greater than the groundwater MSC in monitoring wells MW-3, MW-4, MW-7, and MW-9. Hexavalent chromium either was not detected or was detected only at estimated concentrations (less than the groundwater MSC) in monitoring wells MW-1, MW-2, MW-5, and MW-8.

In November 2024, chromium was detected in groundwater from all monitoring wells sampled; However, only monitoring wells MW-3, MW-4, MW-7, and MW-9 exceeded the groundwater MSC. Hexavalent chromium concentrations in monitoring wells MW-4, MW-7, and MW-9 exceeded the groundwater MSC. Hexavalent chromium either was not detected or was detected only at estimated concentrations (less than the MSC) in monitoring wells MW-1, MW-2, MW-3, MW-5, and MW-8.

The groundwater analytical results are summarized in Table 12. Filtered chromium and filtered hexavalent chromium groundwater isopleths from the November 2024 sampling event are presented as Figure 10 and Figure 11, respectively. Laboratory data packages are provided in Appendix G. The fourth quarterly event for analyses of total and hexavalent chromium is planned for February 2025. Upon the receipt of data, attainment will be requested upon confirmation of stable to decreasing trends.

5.5 Other Off-Site Impacts to Trail

As communicated with PADEP on January 9, 2025 (Appendix A), an evaluation of chromium sources was conducted based on historical United States Geological Survey (USGS) maps and aerials, runoff flow patterns, the cleanups performed, the Arcadis post cleanup sampling, and data collected by PADEP and Arcadis.

Runoff from the Alliance-facing side of the railroad tracks flows onto the Site and the drainage swale along the Site boundary. Both Arcadis and PADEP sample results indicate that historical fill material are sources of hexavalent chromium unrelated to the Site. One of the Site sample points, S-22, with a 3.9 mg/kg hexavalent chromium concentration, was located near the top of the slope on the Alliance side of the railroad tracks (Table 14b). It is likely there is sporadic hexavalent chromium in the entire bank. The general stormwater flow from the railroad embankment along the Alliance property boundary is to the west into the drainage swale on the Site and then to the north to the Bartram's Garden Mile Trail. As discussed in Section 1.8.5, filling activities were conducted onsite in the earlier parts of the 1900s. Additionally, the elevated rail line along the southeast Site boundary dates back to the late 1800s. A USGS map in Appendix A (January 2025 chromium correspondence) shows the rail line in 1891 off the south Site boundary and going across the river. The rail line very likely has the same fill material along its embankment as the fill onsite. Additionally, both Arcadis and PADEP sampling found hexavalent chromium at S-21 that is unrelated to the Site.

The latest PADEP sampling results along the Schuylkill River are likely the result of deposition of river sediments from high tide and flooding from the river. The PADEP sampling after the Alliance cleanup and sampling was conducted within a very dry period with little to no rainwater runoff; this supports that the river sediments are a (secondary) chromium source.

Weekly inspections are conducted after rain events and sometimes during a rain event. Since Alliance made improvements to the swale on its property, there is no current evidence of any runoff leaving the property.

PADEP requested that Alliance perform a human health risk assessment related to certain sample points along Bartram's Garden Mile Trail based upon the latest data collected by PADEP. These samples were collected on October 24, 2024 after Alliance removed sediments in the area, made the drainage swale improvements, and no runoff from the Site had occurred. Following the cleanup of the sediments in September, the sample collected at the end of the swale (S-3) was non-detect for hexavalent chromium. Samples collected from other locations along the trail (S-5/S-6 and S-8A) had hexavalent chromium hits but below the current residential standard. However, three 'background' (upgradient) samples (S-18, S-21 and S-22) collected from elevations above the trail that could not have been impacted from runoff from the Alliance property identified hexavalent chromium indicating that other background sources are impacting the trail. In the October 2024 sampling by PADEP, hexavalent chromium was detected in S-3 but at a concentration below the MSC. The source of that result may be the fill along the higher elevation railroad tracks off the southern property boundary where runoff drains into the swale along the property line that exits at S-3. The hexavalent chromium concentrations in surface soils were observed to vary widely across the sample locations.

5.6 Conclusions

Based on these results, it is evident that non-Site sources impact these locations from the above summary and that Alliance is not responsible for the hexavalent chromium currently present. Nevertheless, as an accommodation to PADEP, Alliance agreed to perform a HHRA of those sample locations (Appendix A).

6. Nature and Extent of Constituents of Concern

The nature and extent of COCs at the Site are discussed in the following subsections through the comparison of sample results to PADEP MSCs. Sample results are also compared to VI SVs.

6.1 Soil

Soil samples were collected during the AST closure activities performed by Stantec in 2021. Arcadis collected additional delineation soil samples in 2021, 2022, and 2023 during the due diligence and subsequent Act 2 investigation activities.

Only seven COCs [benzene, naphthalene, lead, total chromium, hexavalent chromium, biphenyl and bis(2-chloroethyl) ether] were identified at concentrations greater than the PADEP Non-Residential Soil MSCs.

Soil MSC exceedances are presented on Figure 7. COCs that exceed their respective screening values and remain onsite are presented in Table 16.

6.1.1 Tank Containment Areas

Soil investigation activities in the tank containment areas, truck loading area, and paved areas west of Tank Containment Area 1 identified benzene, naphthalene, lead, biphenyl, and bis(2-chloroethyl)ether at concentrations greater than their respective soil MSCs. The extent of each concentration was delineated horizontally and vertically to the water table. MSC exceedances in soil samples are presented on Figure 7. Impacted soils will be moved to a location beneath the proposed building, as discussed in Section 9.

Exposure pathways and proposed future controls related to soil are discussed in Section 7 and Section 9, respectively.

6.1.2 Other Site Areas

The samples collected from the soil pile had some detections of VOCs, SVOCs, PCBs, and metals. However, no concentrations were greater than their respective soil MSCs. As such, it is proposed that the soil will be used as general fill onsite during redevelopment activities.

Low levels of various VOCs were detected in the samples collected from the truck loading area and paved parking areas to the west of Tank Containment Area 1. With the exception of benzene, the concentrations were below soil MSCs. The concentrations of benzene that were greater than the soil MSC (in the pad located west of Tank Containment Area 1) ranged from 0.59 mg/kg in soil boring SB-204 (8.5-9 feet) to 2.6 mg/kg in soil boring SB-202 (8.5-9 feet). MSC exceedances in soil samples are presented on Figure 7. Exposure pathways and proposed future controls related to soil are discussed in Section 7 and Section 9, respectively.

6.1.3 Chromium-Related Exceedances

MSC exceedances of total chromium and hexavalent chromium are presented on Table 14a and Figure 7.

Locations along Bartram's Garden Mile Trail that contained total and hexavalent chromium at concentrations greater than soil MSCs have been removed and placed in drums onsite for future offsite disposal. Detections remaining in soil will be evaluated through risk calculations, as previously discussed with PADEP (Appendix A).

6.2 Groundwater

Eight quarterly groundwater monitoring events were performed from April 2022 to January 2024 for VOCs and lead. Only three COCs (benzene, naphthalene and lead) were detected at concentrations greater than the PADEP Non-Residential Used Aquifer Groundwater MSCs during quarterly monitoring. Benzene was detected in groundwater sampled from one monitoring well (MW-7), located in Tank Containment Area 1, at concentrations greater than the groundwater MSC in each of the sampling events. The benzene isopleth for the most recent Site-wide event (January 2024) is presented on Figure 8.

Naphthalene was detected in groundwater sampled from one monitoring well (MW-9), located in Tank Containment Area 3, at a concentration greater than the groundwater MSC during two sampling events. The concentrations for the last three sampling events were less than the groundwater MSC.

In addition, lead was detected in groundwater in monitoring well MW-9 at concentrations greater than the groundwater MSC in each of the sampling events. A downward trend in concentration was identified during the monitoring program. The concentrations of lead in groundwater sampled from downgradient monitoring well MW-4 were less than the groundwater MSC. The lead isopleth for the most recent Site-wide event (January 2024) is presented on Figure 9.

During ongoing communications regarding hexavalent chromium, PADEP requested that two full rounds of groundwater sampling be conducted to include total and hexavalent chromium and that results be reported in this RIR/Cleanup Plan. PADEP indicated that two additional quarters of sampling should subsequently be completed to demonstrate attainment, and results could be presented in an RIR Addendum. Analyses of chromium was initiated in May 2024, and three quarterly events have been completed. Filtered total chromium concentrations in monitoring wells MW-3, MW-4, MW-7, MW-8, and MW-9 exceed the MSC. Filtered hexavalent chromium concentrations in monitoring wells MW-3, MW-4, MW-7, and MW-9 exceeded the MSC. Hexavalent chromium either was not detected or was detected only at estimated concentrations (less than the MSC) in monitoring wells MW-1, MW-2, MW-5, and MW-8.

Filtered total chromium and filtered hexavalent chromium groundwater isopleths from the November 2024 sampling event are presented as Figure 10 and Figure 11, respectively.

Trends in groundwater over the eight quarterly events for benzene, naphthalene, and lead are stable to decreasing. Trends of total and hexavalent chromium in groundwater samples will be evaluated upon receiving results from the fourth quarterly sampling event. Isopleths and fate and transport modeling results indicate that COC concentrations will not travel beyond the Site or adjacent railroad property. It is currently proposed that an EC will be used to address the groundwater exceedances. Exposure pathways and controls related to groundwater are discussed in Section 7 and Section 9, respectively.

6.3 Soil Gas

Soil gas sampling was conducted in May 2022 at seven locations, SG-1 through SG-7, with depths ranging from 2.5 to 9 feet bgs.

Concentrations were compared to the SHS Sub-slab VI SVs for screening purposes. In addition, because it is proposed that SSS will be used for benzene and naphthalene, the soil gas concentrations were evaluated relative to 1/10th the VI SV for these compounds. Benzene was detected in the soil gas sample from SG-5 at a

concentration exceeding the SHS and SSS SV. Non-detected laboratory MDLs and RLs of other constituents were also greater than their respective VI SVs. The VI exposure pathway is discussed further in Section 7.

7. Conceptual Site Model and Exposure Evaluation

The Site is located in a historical and present industrial/commercial section of Philadelphia, adjacent to Bartram's Garden Mile Trail and the Schuylkill River. The petroleum ASTs were located on an approximately 12-acre parcel located south of 51st Street.

Petroleum ASTs and associated piping have been demolished and removed. Aboveground buildings and structures have also been removed. An oil-water separator remains in the northeast portion of the Site in a gravel area. The former AST locations and containment areas are covered with soil or gravel.

Surficial geology identified at the Site consisted primarily of light brown silty sand with mica clasts (Appendix D). The formation underlying the Site is the Wissahickon Formation, which is composed of a medium- to coarse-grained foliated crystalline rock ranging in texture from gneiss to schist. Groundwater is encountered in the overburden at depths between 3 and 13 feet bgs. Groundwater flow is primarily toward the east, toward the Schuylkill River. This stretch of the Schuylkill River is in the tidal zone, where there is a tidal swing of approximately 6 feet.

The operations of the former ASTs and piping systems are believed to be the source of the petroleum-related COCs identified in the subsurface soil at the Site. Soil investigation activities have identified concentrations of all COCs, except for benzene, naphthalene, bis(2-chloroethyl) ether, biphenyl, lead, total chromium, and hexavalent chromium, at levels less than their representative soil MSCs.

Groundwater sampling has identified benzene, naphthalene, and lead from former operations, and total chromium and hexavalent chromium from historical filling at concentrations greater than the groundwater MSCs.

The future intended use of the Site is non-residential. Currently, proposed redevelopment of the Site includes moving soil, grading surfaces, constructing a warehouse or other similar building, and paving other areas of the Site (Section 9). Deed restrictions will be put into place that will memorialize Site use restrictions and protect Site redevelopers and future workers.

The following sections present the exposure pathway evaluation by environmental media.

7.1 Soil

Potential exposure pathways for COCs related to soils include direct contact, soil COCs leaching to groundwater, and VI into future buildings. There are no current soil exposure pathways because the Site is not in use and is secured by fence.

7.1.1 Direct Contact

Currently, the Site consists of unpaved soil and gravel areas where the former AST locations, containment areas, former fuel truck loading rack, and guard house were previously located.

As discussed in Sections 9 and 10, it is currently proposed that the Site will be redeveloped as a warehouse or similar building use and that an EC will require engineering controls to limit exposure COC concentrations in soil that exceed criteria. As part of the redevelopment, onsite soil will be graded and relocated to address the elevation differences across the Site (Figures 14 and 15). Work will be required to be conducted in accordance with a Materials Management Plan (MMP), as described in Section 9. Following redevelopment of the Site, the soil with COC concentrations greater than the Non-Residential Direct Contact screening values will be located beneath the building slab and/or the surrounding concrete pavement, asphalt pavement, and landscaped areas. Based on the

current redevelopment plans, the potential direct contact exposure pathway is considered incomplete because of the proposed MMP and the maintenance requirement for the engineering controls that will be memorialized in the future EC for the Site. Proposed land use controls will prevent future exposure under a non-residential land-use scenario. While current chromium detections offsite are not attributable to the Site, a forthcoming risk assessment will confirm that direct contact with soil is not a concern on the Bartram's Garden Mile Trail.

7.1.2 Soil to Groundwater

Benzene was detected in soil in Tank Containment Areas 1 and 3 at concentrations greater than the PADEP Non-Residential Soil-to-Groundwater screening value. Additional COCs present at concentrations greater than the screening value include: naphthalene, lead, bis(2-chloroethyl) ether, and biphenyl in Tank Containment Area 1; lead in Tank Containment Areas 2; and, total chromium and hexavalent chromium at the locations shown on Figure 7. Exceedances of the soil screening values are summarized in Table 16.

Following the proposed grading and redevelopment of the Site, soil with COC concentrations greater than the PADEP Soil-to-Groundwater Non-Residential screening values will be located beneath impervious surfaces, including concrete and/or asphalt pavement. Based on the proposed redevelopment plans, the soil-to-groundwater exposure pathway is considered incomplete because the maintenance requirement for the engineering controls will be memorialized in the future EC for the Site, as discussed in Section 9.

7.1.3 Vapor Intrusion from Soil

As an initial screening of potential vapors emanating from subsurface soils, COC concentrations in soil samples were compared to the current PADEP Non-Residential VI SVs. Concentrations of benzene and naphthalene exceeded the SV in soil at various borings located primarily within Tank Containment Area 1 (Table 1). In addition, bis(2-chloroethyl)ether was detected in one location (soil boring SB-103 in October 2021) at a concentration greater than the VI SV (Table 2). The sample depths ranged from 4 to 9 feet bgs in these borings.

Based on the proposed grading and redevelopment of the Site, the soil with COC concentrations greater than the PADEP VI SVs will be located beneath the building slab and/or the surrounding concrete pavement, asphalt pavement, and landscaped areas. As part of the warehouse construction, a passive SSDS also will be installed as a proactive VI mitigation measure to address soil beneath the building with concentrations greater than the VI SVs. After construction is complete and before submittal of the Final Report, confirmatory sub-slab soil gas and indoor air sampling will be conducted to verify that no VI is occurring.

7.2 Groundwater

Exposure pathways related to groundwater are evaluated in the following subsections.

7.2.1 Direct Contact

Benzene, naphthalene, lead, total chromium, and hexavalent chromium have been present in groundwater at concentrations greater than their respective groundwater MSCs. The is no current direct contact to groundwater because the Site is inactive. Fate and transport modeling results indicate that COCs will not travel beyond the Site or adjacent railroad.

It is currently proposed that an EC will be used to address the groundwater exceedances. Exposure pathways and controls related to groundwater are discussed in Section 7 and Section 9, respectively. With the implementation of an EC, this potential exposure pathway is considered incomplete for future receptors.

7.2.2 Ingestion

There is no current ingestion of groundwater as there is no potable use of groundwater in the area. The Site and surrounding areas are supplied with water from the PWD. The PWD owns and operates three water treatment plants. The Queen Lane Plant is located in East Falls and draws water from the Schuylkill River via its intake located along Kelly Drive. The Belmont Plant is located in Wynnefield and also draws water from the Schuylkill River via its intake located along Martin Luther King, Jr. Drive. The Baxter Plant is located in Torresdale, and its water comes from the Delaware River. Its intake is located at the plant site on the Delaware River.

The EC for the Site will memorialize the groundwater use restriction. Arcadis performed a 1-mile radius well search in November 2024 (Appendix K) using the state database maintained by the Pennsylvania Groundwater Information System (also known as the Pennsylvania Geologic Data Exploration). According to the well search, the following were reported within 1 mile of the Site:

- 124 monitoring wells;
- 11 wells with no use provided;
- Three observation wells;
- Two test wells; and
- 58 withdrawal wells.

Additionally, 38 abandoned wells, 31 destroyed wells, and eight unused wells were reported within the 1-mile radius. The wells within 0.5 mile are presented on Table K-1 in Appendix K. The two withdrawal wells that were identified near the 0.5-mile radius are located on the opposite side of the Schuylkill River on an industrial property. No hydraulically downgradient domestic potable supply wells were identified within 0.5 mile of the Site.

Based on the groundwater investigation results and the location of the wells, as presented in the well search results, the migration of COCs in groundwater to a potable source is not expected.

7.2.3 Dermal Contact

The depth to groundwater at the Site currently ranges from approximately 3.5 to 12 feet bgs. Site topography varies in elevation due to the nature of the former AST containment areas. During the proposed redevelopment activities, existing onsite soil is proposed to be graded (cut and filled) to achieve the required final grade. In areas where the current depth to groundwater is shallow (3.5 feet bgs), it is planned that approximately 8.5 feet of fill will be added as described in the PADEP-approved RAP (Alliance 2023b), so the minimum depth to groundwater following redevelopment will be approximately 12 feet bgs. The proposed cut and fill activities are presented on Figure 14.

During redevelopment, construction workers will follow the soil and groundwater management plans prepared for the Site. Following Site redevelopment, it is not expected that future construction workers will excavate to the depth required to encounter the water table. The EC will include an MMP that will be used as a model for future intrusive work, as discussed in Section 9. Therefore, potential exposure pathways related to a future worker contacting groundwater are considered incomplete.

7.2.4 Vapor Intrusion from Groundwater

As part of an initial screening of potential vapors emanating from groundwater, groundwater samples were compared to the current PADEP Non-Residential SHS VI SVs. Results of the analysis of groundwater samples

collected at the Site show that COC concentrations do not exceed the PADEP Non-Residential PADEP VI SVs (Table 12).

The groundwater VI pathway is considered incomplete.

7.3 Soil Gas

During the proposed redevelopment activities, subgrade infrastructure that has the potential to serve as a preferential pathway beneath the surface will be constructed. The soil gas samples previously collected below the proposed building footprint are expected to accurately represent possible future conditions.

Benzene was detected in a soil gas sample from soil gas sampling point SG-5 at a concentration exceeding the SHS and SSS VI SVs. Non-detected laboratory MDLs and RLs of other constituents were also greater than their respective VI SVs.

Soil gas sampling point SG-5 is in an area that is proposed to receive fill to bring the final grade up to the required elevation. In addition, as part of the warehouse construction, a passive SSDS will be installed as a proactive VI mitigation measure to address soil beneath the building with concentrations above the VI SVs. After construction is complete, confirmatory sub-slab soil gas and indoor air sampling will be conducted to verify that no vapor intrusion is occurring. The Final Report will provide confirmation that the SSDS is effective and that the pathway is incomplete.

7.4 Surface Water

The closest surface-water body is the Schuylkill River, which is located east of the Site. Groundwater flows to the east-northeast, toward the Schuylkill River. In the farthest onsite downgradient monitoring well (MW-1), the groundwater contains no COCs that exceed the MSCs, confirming that there are no groundwater COCs migrating to the river.

The only surface water samples from the 2024 – 2025 chromium investigation that exhibited detections of hexavalent chromium at concentrations greater than PADEP Chapter 93 Surface Water Quality Criteria (DEP51-W5 and -W6; Table 15) were collected from standing water in low lying areas within the site boundary. These low-lying areas are only intermittently saturated and would not support aquatic life. Surface water samples collected in the Schuylkill River (Figure 13) were either not detected or at very low estimated concentrations (Table 15).

Therefore, the surface-water pathway is considered incomplete.

7.5 Ecological Receptors

An evaluation of potential ecological receptors follows.

7.5.1 Wetlands Inventory

Arcadis conducted an evaluation of wetlands in the area via the National Wetlands Inventory (NWI) wetlands mapping tool provided by the United States Fish & Wildlife Service (USFWS 2024). NWI maps are used as a guide, along with other data, to indicate the potential presence of wetlands. The presence of an NWI feature is not a definitive indicator that a wetland or waterbody is present. The NWI data indicated a 0.08-acre Freshwater Emergent Wetland habitat classified as a PEM1Fx, which is located approximately 0.1 miles northeast of the Site. The NWI data also indicated a 0.18-acre Freshwater Emergent Wetland habitat classified as a PEM1Cx, which is

located approximately 0.2 miles north of the Site boundary. Lastly, the NWI data indicated a 21,690.68-acre Riverine habitat classified as a R1UBV, which is the Schuylkill River located adjacent to the Site. The Site is located roughly 3.5 miles from where the Schuylkill River feeds into the Delaware River. An NWI feature map is provided in Appendix L.

7.5.2 Pennsylvania Natural Diversity Inventory

Arcadis completed a Pennsylvania Natural Diversity Inventory (PNDI) survey for the Site and surrounding area in December 2024 as part of the Act 2 evaluations. Survey responses from the Pennsylvania Game Commission and USFWS indicated that there were no known adverse effects. The initial responses from both the Pennsylvania Department of Conservation and Natural Resources (PADCNR) and Pennsylvania Fish and Boat Commission indicated that there was a potential adverse effect and that further review was required. Following their subsequent reviews, the agencies confirmed that no adverse effects are anticipated within the project area. The PNDI survey and PADCNR and Pennsylvania Fish & Boat Commission clearance letters are provided in Appendix L.

Arcadis will conduct additional NWI and PNDI inquiries and provide updates in the Final Report as necessary.

8. Selection of Remedial Standards

Detected constituents in soil and groundwater samples, and therefore the established COCs for the Site are presented in Table 17. It is expected that COCs in Site media will demonstrate attainment of a combination of SHS and SSS. Due to the expected institutional controls for the Site, Non-residential standards will be met.

The lower of the PADEP soil Direct Contact screening value and the PADEP Non-Residential Soil-to-Groundwater screening value are the representative MSCs for soil concentrations at the Site. The following COCs are greater than their respective MSCs, and therefore meet SSS for soil: benzene, naphthalene, bis(2-chloroethyl) ether, biphenyl, lead, total chromium, and hexavalent chromium. The remaining COCs meet SHS.

The PADEP Used Aquifer MSCs were used for screening COC concentrations in groundwater. The following COCs meet SSS for groundwater based on at least one exceedance in groundwater samples during monitoring: benzene, naphthalene, and lead, total chromium, and hexavalent chromium. The remaining COCs meet SHS.

For COCs that do not meet SHS, the SSS will be used via pathway elimination consisting of engineering and institutional controls (Section 9).

9. Cleanup Plan

This Cleanup Plan has been prepared to summarize the remedial approach at the Site, to demonstrate attainment of Act 2 standards, and to meet the remedial action objectives (RAOs) described in Section 9.2.

9.1 List of Contacts

The Owner and Remediator of the Site is:
Max Ryan
Alliance 51st Street, LLC
40 Morris Avenue
Suite 230
Bryn Mawr, PA 19010
Phone: 856.699.1105
Email: mryan@alliancehp.com

The consultant contacts are:

1) Lawrence G. Brunt, P.E.
   Arcadis U.S., Inc.
   1 Harvard Way, Suite 5
   Hillsborough, NJ 08844
   Phone: 908.685.7878
   Email: Larry.Brunt@arcadis.com

2) Matthew McCaughey, P.G.
   Arcadis U.S., Inc.
   7550 Teague Road, Suite 310
   Hanover, MD 21076
   Phone: 401.923.7819
   Email: Matthew.McCaughey@arcadis.com

9.2 Previously Completed and Ongoing Remedial Actions

Historical active remedial activities conducted at the Site include AST removals and excavation of COC-containing soils. Some soils (primarily the soil pile) have been reworked within the Site in accordance with the RAP (Alliance 2023b) as part of redevelopment. Redevelopment plans are currently paused until a prospective buyer is identified.

Additionally, chromium-related impacts have been removed (scraped) from Bartram's Garden Mile Trail with PADEP involvement, and containerized for offsite disposal.

9.3 Remedial Action Objectives

The RAOs for the Site are to:

- Protect human health and the environment;
- Identify the potential exposure pathways for the Site's current and anticipated future land use;
- Describe the methods employed to mitigate the identified exposure pathways; and
- Qualify for relief of liability under Act 2 with respect to the presence of COCs in Site media.

The SSS developed for the Site include pathway elimination measures and the use of engineering and institutional controls to address potential risk to human health and the environment, including risk resulting from probable future Site use.

9.4 Evaluation of Remedial Alternatives

Remedial alternatives were evaluated in accordance with the criteria established under Section 304(j) of Act 2, which are as follows:

- Long-term risks and effectiveness of the proposed remedy;
- Reduction of the toxicity, mobility, and volume of regulated substances;
- Short-term risks and effectiveness of the proposed remedy; and
- The ease or difficulty of implementation.

Several remedial alternatives were considered for the proposed remedy, including:

- Source removal (soil excavation, groundwater extraction);
- Engineering controls (cap/pavement);
- Active remediation (injections, soil vapor extraction);
- Passive remediation (vapor barrier, SSDS); and
- Institutional controls.

9.5 Proposed Remedy

Currently, there are no exposure pathways to receptors because the Site is inactive and there is no potable groundwater use. Future land use is anticipated under a non-residential land use scenario with the construction of a warehouse distribution facility and placement of low-permeability concrete or asphalt pavement across the majority of the Site.

To minimize future exposure risks, an environmental covenant will be established that will (1) restrict future groundwater use; (2) require maintenance of the future low-permeability pavement cap; (3) proper management of soils and materials in accordance with an MMP to prevent accidental exposure to impacted media during future construction and site maintenance activities; and (4) inclusion of a passive vapor mitigation system in the construction of future buildings.

Additional details are provided below.

Based on long-term effectiveness, ease of implementation, and the minimal risk expected, it is currently proposed that COC concentrations in soil that exceed MSCs [benzene, naphthalene, bis(2-choloethyl) ether, biphenyl, lead, total chromium, and hexavalent chromium] will be addressed using engineering controls and an EC.

The EC will also address COCs in groundwater at concentrations greater than groundwater MSCs: benzene, naphthalene, lead, and total and hexavalent chromium.

It is currently proposed that the Site will be developed as a warehouse distribution facility. As part of redevelopment, remaining onsite soil will be graded and relocated as practicable to address the elevation differences across the Site and eliminate the need for offsite disposal. Based on the current elevations at the Site, the soil in the southwestern portion of the Site will be excavated and moved to the central and northeastern portions of the Site to achieve a cut and fill soil balance at the Site. The areas of cut and fill are illustrated on Figure 14.

Soil from the southwestern portion of the Site will be excavated and relocated as follows:

- Under the proposed warehouse building, where other soil contains lead and benzene;
- Under the proposed warehouse building, where there are no COCs in soil with concentrations above criteria; and
- In areas where COCs are present in soil but not in groundwater.

The excavation of the soil or cuts will be only as deep as necessary to achieve the final grades on the Site. The proposed movement of the soil is illustrated on Figure 15.

Following the movement of the soil, redevelopment of the Site will include construction of a building with a concrete slab and concrete and asphalt pavement around the building. These will act as engineering controls with regard to direct contact and will mitigate COCs leaching to the groundwater. As a final redeveloped condition, soil containing COC concentrations above MSCs will be beneath the building or paved areas. The proposed redevelopment plan and engineering controls are illustrated on Figure 16.

In addition, as part of building construction, a passive SSDS will be installed as a proactive VI mitigation measure to address COC concentrations greater than the VI SVs in soil and soil gas.

The proposed post-remedial care plan is discussed in Section 9.6.

9.6 Groundwater Attainment

At least eight quarters of Site-wide groundwater sampling were conducted for the analysis of VOCs and lead between April 2022 and January 2024. Stable to decreasing trends are observed and no downgradient wells exhibit impacts. Fate and transport modeling confirms no future offsite transport of COCs to receptors.

Exposure pathways related to groundwater will remain incomplete both on- and offsite.

During ongoing communications regarding hexavalent chromium, PADEP requested that two full rounds of groundwater sampling be conducted to include total and hexavalent chromium and that results be reported in this RIR/Cleanup Plan. PADEP indicated that two additional quarters of sampling could subsequently be completed to demonstrate attainment, and results could be presented in an RIR Addendum. Groundwater has been sampled for (filtered) total and hexavalent chromium three times during preparation of this RIR/CP. Select wells were sampled in May 2024 and two full rounds were collected in August and November 2024. The concentrations in

the wells are stable. Sampling will cease upon confirmation that the fourth quarter sampling event (May 2025) is consistent with previous events and upon PADEP concurrence.

9.7 Proposed Post-Remedial Care Plan

Pursuant to the proposed EC, the Site will be subject to the following proposed AULs that the then-current property owner and the tenants, agents, employees, and other persons under its control will abide by:

- The Site will remain as non-residential property as defined in the Land Recycling and Environmental Remediation Standards Act of 1995.
- Groundwater at the Site will not be used for farming, irrigation, agricultural, or potable purposes.
- The proposed engineering controls (when completed) in the areas of the PADEP Non-Residential Soil MSC exceedances will be inspected and maintained to prevent exposure and to mitigate potential leaching of COCs within the underlying soils.
- An MMP will be required for future Site intrusive work. A draft MMP will be provided in the Final Report.
- The forthcoming SSDS for the proposed building will require maintenance. If additional buildings are constructed onsite, an evaluation of potential VI issues will be required to assess whether mitigation is necessary.

10. Conclusions

This section presents a summary and conclusions for onsite areas and the offsite trail. Additionally, it describes the public involvement activities and next steps for PADEP's concurrence.

Onsite Areas: The Site has undergone environmental assessment activities since 2021, when the ASTs and associated piping were removed. Based on the results of previous AST closure soil sampling and subsequent delineation soil sampling for Act 2, concentrations of benzene, naphthalene, bis(2-chloroethyl)ether, biphenyl, lead, total chromium, and hexavalent chromium are greater than their respective PADEP Non-Residential Soil MSCs. Soil exceedances have been delineated onsite and soils containing COCs will be moved to a contained area during redevelopment activities. It is proposed that SSS will be used for these COCs, with pathway elimination consisting of an EC and engineering controls installed during redevelopment of the Site.

Groundwater sampling has identified benzene, naphthalene, filtered lead, filtered total chromium, and filtered hexavalent chromium at concentrations greater than the PADEP Non-Residential Used Aquifer Groundwater MSCs; these COCs will meet SSS. The concentrations of VOCs and lead have remained stable or have shown a decreasing trend throughout the quarterly monitoring program, and the detected concentrations in groundwater in the downgradient wells are less than their respective groundwater MSCs. The concentrations of all other COCs are less than the PADEP Non-Residential Used Aquifer Groundwater MSCs. Based on the sampling results over eight consecutive quarters, attainment in groundwater is demonstrated, except for the total and hexavalent chromium, which are still being sampled for in accordance with PADEP communications (Appendix A). Site-related COCs are not expected to travel beyond the Site boundary or adjacent railroad at concentrations greater than their respective MSCs. Analytical results from surface water samples collected in the Schuylkill River confirm that COCs are not impacting surface water. It is proposed that SSS will be used for benzene, naphthalene, lead, and total and hexavalent chromium, with pathway elimination consisting of an EC. PADEP communications resulting from ecological screening confirm no open exposure pathways to ecological receptors.

Soil gas was evaluated through the comparison of soil, groundwater, and soil gas sampling results to the PADEP Non-Residential SHS VI SVs. In addition, soil gas sampling results were evaluated relative to 1/10th the VI SVs for benzene and naphthalene because the SSS will be used to address these organic COCs. The evaluation identified benzene in sample SG-5 and non-detected MDLs at concentrations greater than the applicable VI SVs in SG-5, SG-6, and SG-7. As part of the warehouse construction during Site redevelopment, a passive SSDS will be installed as a proactive vapor intrusion mitigation measure to address concentrations greater than VI SVs beneath the building.

Bartram's Garden Mile Trail: Detections of hexavalent chromium are present in exceedance of the relevant Soil MSCs, Non-residential MSCs onsite and Residential MSCs along Bartram's Garden Mile Trail. Alliance remediated areas of Bartram's Garden Mile Trail receiving runoff from the Site drainage swale after discussion with PADEP, and post-remediation soil sampling results were primarily below the standards. Following the removal activities, the detections along the trail are not believed to be associated with historical Site operations, but rather with historical filling activities, the deposition of Schuylkill River sediments, as well as tidal influences from the river. Additional risk evaluations will be conducted, as agreed upon with PADEP, to evaluate hexavalent chromium at the specified locations along Bartram's Garden Mile Trail. The risk assessment will be submitted to PADEP under separate cover.

Public Involvement: The City of Philadelphia comments on the PIP were addressed, as practicable, in the February 2025 update to the PIP (Appendix B). A public meeting will be held following submittal of this RIR/Cleanup Plan. Other details of the PIP are presented in Section 1.2.

Next Steps: It is anticipated that potentially complete exposure pathways associated with the Site will be eliminated by the AULs that will be memorialized in the EC for the Site and that the Site will be in attainment with PADEP SHS and SSS (pathway elimination).

On behalf of Alliance, Arcadis respectfully requests PADEP concurrence with the conclusions and proposed activities set forth in this RIR/Cleanup Plan. The proposed activities are consistent with the activities previously proposed in the RAP (Alliance 2023b) and approved by PADEP (PADEP 2024).

Table 1
Tank Containment Area 1 - Summary of Soil Sampling Results for AST Closure
Alliance 51st Street LLC
1630-1646 South 51st Street
Philadelphia, Pennsylvania

Notes:
1. Samples were collected by Stantec Consulting Services, Inc. on behalf of PBF Logistics Products Terminals LLC.
2. Concentrations are reported in milligrams per kilogram.
3. Shaded results indicate detected concentrations in exceedance of the Representative Pennsylvania Soil MSCs.
4. Underlined results indicate detected concentrations in exceedance of the Pennsylvania Non-Residential Vapor Intrusion screening values.
5. ***Bold and italicized*** values indicate a non-detected result with the MDL greater than the MSC.

Acronyms and Abbreviations:
' = foot/feet
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
AST = aboveground storage tank
Conc. = concentration
GW = groundwater
ID = identification
MDL = method detection limit
MSC = Medium Specific Concentration
ND = not detected
Q = qualifier
RL = reporting limit

Laboratory Qualifiers:
J = The compound was detected; however, the concentration is below the laboratory reporting limit, so the concentration is estimated.
U = Compound was undetected at the listed laboratory method detection limit.

Table 2
Tank Containment Area 1 - Summary of Delineation Soil Sampling Results

Table 2
Tank Containment Area 1 - Summary of Delineation Soil Sampling Results
Alliance 51st Street LLC
1630-1646 South 51st Street
Philadelphia, Pennsylvania

Notes:
1. Samples were collected by Arcadis U.S., Inc. on behalf of Alliance 51st Street LLC.
2. Concentrations are reported in milligrams per kilogram.
3. Shaded results indicate detected concentrations in exceedance of the Representative Pennsylvania Soil MSCs.
4. Underlined results indicate detected concentrations in exceedance of the Pennsylvania Non-Residential Vapor Intrusion screening values.
5. ***Bold and italicized*** values indicate a non-detected result with the MDL greater than the MSC.

Acronyms and Abbreviations:
' = foot/feet
- = Data not available.
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
Conc = concentration
E = concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument
ID = identification
J = the compound was detected; however, the concentration is below the laboratory method detection limit so the concentration is estimated
MDL = method detection limit
MSC = Medium Specific Concentration
Q = qualifier
RL = reporting limit
U = compound was undetected at the listed laboratory method detection limit
USEPA = United States Environmental Protection Agency

Notes:
1. Samples were collected by Arcadis U.S., Inc. on behalf of Alliance 51st Street LLC.
2. Concentrations are reported in milligrams per kilogram.
3. Shaded results indicate detected concentrations in exceedance of the Representative Pennsylvania Soil MSCs.
4. Underlined results indicate detected concentrations in exceedance of the Pennsylvania Non-Residential Vapor Intrusion screening values.
5. ***Bold and italicized*** values indicate a non-detected result with the MDL greater than the MSC.

Acronyms and Abbreviations:
- = data not available
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
Conc = concentration
ID = identification
GC/MS = gas chromatography/mass spectrometry
MDL = method detection limit
MSC = Medium Specific Concentration
NDPA/DPA = n-nitrosodipropylamine/diphenylamine
Q = qualifier
RL = reporting limit
SIM = selected ion monitoring

Laboratory Qualifiers:
J = The compound was detected; however, the concentration is below the laboratory reporting limit, so the concentration is estimated.
U = Compound was undetected at the listed laboratory method detection limit.

Tank Containment Area 2 - Summary of Soil Sampling Results for AST Closure
Alliance 51st Street LLC
1630-1646 South 51st Street
Philadelphia, Pennsylvania

Notes:

1. Samples were collected by Stantec Consulting Services, Inc. on behalf of PBF Logistics Products Terminals LLC.
2. Concentrations are reported in milligrams per kilogram.
3. Shaded results indicate detected concentrations in exceedance of the Representative Pennsylvania Soil MSCs.
4. There were no exceedances of the Pennsylvania Non-Residential Vapor Intrusion screening values for detected values.
5. ***Bold and italicized*** values indicate a non-detected result with the MDL greater than the MSC.

Acronyms and Abbreviations:

' = foot/feet
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
AST = aboveground storage tank
Conc = concentration
GW = groundwater
ID = identification
MDL = method detection limit
MSC = Medium Specific Concentration
Q = qualifier
RL = reporting limit

Laboratory Qualifiers:

J = The compound was detected; however, the concentration is below the laboratory reporting limit, so the concentration is estimated.
U = Compound was undetected at the listed laboratory method detection limit.

Table 4
Tank Containment Area 2 - Summary of Delineation Soil Sampling Results

Table 5
Tank Containment Area 3 - Summary of Soil Sampling Results for AST Closure
Alliance 51st Street LLC
1630-1646 South 51st Street
Philadelphia, Pennsylvania

Notes:
1. Samples were collected by Stantec Consulting Services, Inc. on behalf of PBF Logistics Products Terminals LLC.
2. Concentrations are reported in milligrams per kilogram.
3. Shaded results indicate detected concentrations in exceedance of the Representative Pennsylvania Soil MSCs.
4. Underlined results indicate detected concentrations in exceedance of the Pennsylvania Non-Residential Vapor Intrusion screening values.
5. ***Bold and italicized*** values indicate a non-detected result with the MDL greater than the MSC.

Acronyms and Abbreviations:
' = foot/feet
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
AST = aboveground storage tank
Conc = concentration
GW = groundwater
ID = identification
MDL = method detection limit
MSC = Medium Specific Concentration
ND = not detected
Q = qualifier
RL = reporting limit

Laboratory Qualifiers:
F2 = MS/MSD RPD exceeds control limits
FL = MS and/or MSD recovery below control limits
J = The compound was detected; however, the concentration is below the laboratory reporting limit, so the concentration is estimated.
J^c = CCV recovery is outside acceptance limits
U = Compound was undetected at the listed laboratory method detection limit.

Notes:
1. Samples were collected by Arcadis U.S., Inc. on behalf of Alliance 51st Street LLC.
2. Concentrations are reported in milligrams per kilogram.
3. Shaded results indicate detected concentrations in exceedance of the Representative Pennsylvania Soil MSCs.
4. There were no exceedances of the Pennsylvania Non-Residential Vapor Intrusion screening values.

Acronyms and Abbreviations:
' = foot/feet
- = data not available
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
Conc = concentration
GC/MS = gas chromatography/mass spectrometry
GW = groundwater
ID = identification
MDL = method detection limit
MSC = Medium Specific Concentration
Q = qualifier
RL = reporting limit

Laboratory Qualifier:
J = The compound was detected; however, the concentration is below the laboratory reporting limit, so the concentration is estimated.
U = Compound was undetected at the listed laboratory method detection limit.

Table 7
Other Site Areas - Summary of Delineation Soil Sampling Results
Alliance 51st Street LLC
1630-1646 South 51st Street
Philadelphia, Pennsylvania

Notes:
1. Samples were collected by Arcadis U.S., Inc. on behalf of Alliance 51st Street LLC.
2. Concentrations are reported in milligrams per kilogram.
3. Shaded results indicate detected concentrations in exceedance of the Representative Pennsylvania Soil MSCs.
4. Underlined results indicate detected concentrations in exceedance of the Pennsylvania Non-Residential Vapor Intrusion screening values.
5. ***Bold and italicized*** values indicate a non-detected result with the MDL greater than the MSC.

Acronyms and Abbreviations:
' = foot/feet
- = data not available
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
Conc = concentration
GW = groundwater
ID = identification
MDL = method detection limit
MSC = Medium Specific Concentration
Q = qualifier
RL = reporting limit

Laboratory Qualifiers:
E = The concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
J = The compound was detected; however, the concentration is below the laboratory reporting limit, so the concentration is estimated.
U = Compound was undetected at the listed laboratory method detection limit.

Table 8
Summary of Sampling Results - Onsite Soil Stockpile
Alliance 51st Street LLC
1630-1646 South 51st Street
Philadelphia, Pennsylvania

Notes:
1. Samples were collected by Arcadis U.S., Inc. on behalf of Alliance 51st Street LLC.
2. Concentrations are reported in milligrams per kilogram.
3. There were no exceedances of the Representative Pennsylvania Soil MSCs.

Acronyms and Abbreviations:
' = foot/feet
- = data not available
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
Conc = concentration
GW = groundwater
ID = identification
MDL = method detection limit
MSC = Medium Specific Concentration
Q = qualifier
RL = reporting limit

Laboratory Qualifiers:
J = The compound was detected; however, the concentration is below the laboratory method detection limit, so this concentration is estimated.
U = Compound was undetected at the listed laboratory method detection limit.

Notes:
1. Samples were collected by Arcadis U.S., Inc. on behalf of Alliance 51st Street LLC.
2. Concentrations are reported in milligrams per kilogram.
3.There were no exceedances of the Representative Pennsylvania Soil MSCs for detected values.
4. ***Bold and italicized*** values indicate a non-detected result with the MDL greater than the MSC.

Acronyms and Abbreviations:
' = foot/feet
- = data not available
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
Conc = concentration
GW = groundwater
ID = identification
MDL = method detection limit
MSC = Medium Specific Concentration
Q = qualifier
RL = reporting limit
SIM = selected ion monitoring

Laboratory Qualifiers:
J = The compound was detected; however, the concentration is below the laboratory method detection limit, so this concentration is estimated.
U = Compound was undetected at the listed laboratory method detection limit.

Notes:
1. Concentrations are reported in micrograms per liter.
2. Shaded results indicate detected concentrations are exceedances of the groundwater MSC.
3. Bold and italicized values indicate a non-detected result with the MDL greater than the MSC.

Acronyms and Abbreviations:
- = data not available
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
* = Site-Specific Non-Residential Vapor Intrusion screening value
Conc = concentration
ID = identification
MDL = method detection limit
MSC = Medium Specific Concentration
Q = qualifier
RL = reporting limit
SIM = selected ion monitoring

Laboratory Qualifiers:
E = Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
J = The compound was detected; however, the concentration is below the laboratory method detection limit. so this concentration is estimated.
U = Compound was undetected at the listed laboratory method detection limit.

Notes:
[a] Depth to screen was estimated using a downhole camera.
1. For monitoring wells MW-1 through MW-5, total depth and screen lengths were estimated using available information from the field; no well construction logs were available.
2. Monitoring well MW-2 was damaged prior to August 2024. Repaired and resurveyed in September 2024. Original TOC elevation was 16.44 ft msl.

Acronyms and Abbreviations:
ft bgs = feet below ground surface
ft btoc = feet below top of casing
ft msl = feet above mean sea level
ID = identification
NI = not installed
TOC - top of casing

Table 12
Summary of Monitoring Well Sampling Results

Table 12
Summary of Monitoring Well Sampling Results
Alliance 51st Street LLC
1630 - 1646 South 51st Street
Philadelphia, Pennsylvania

Notes:
1. Concentrations are reported in micrograms per liter.
2. Shaded results indicate detected concentrations in exceedance of the Groundwater MSCs.
3. There were no exceedances of the Pennsylvania Non-Residential Vapor Intrusion screening values for detected values.

Acronyms and Abbreviations:
- = data not available
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
Conc = concentration
MDL = method detection limit
MSC = Medium Specific Concentration
Q = qualifier
RL = reporting limit
SIM = selected ion monitoring

Laboratory Qualifiers:
J = The compound was detected; however, the concentration is below the laboratory method detection limit. so this concentration is estimated.
U = The compound was undetected at the listed laboratory method detection limit.

Notes:
1. Concentrations are reported in micrograms per liter.
2. There were no detected exceedances of the Groundwater MSCs.
3. ***Bold and italicized*** values indicate a non-detected result with the MDL greater than the MSC.

Acronyms and Abbreviations:
- = Data not available.
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
Conc = concentration
GC/MS = gas chromatography/mass spectrometry
ID = identification
MDL = method detection limit
MSC = Medium Specific Concentration
NDPA/DPA = n-nitrosodipropylamine/diphenylamine
NS = no Pennsylvania Department of Environmental Protection criteria established for this parameter
Q = qualifier
RL = reporting limit
SIM = selected ion monitoring

Laboratory Qualifiers:
U = the compound was undetected at the listed laboratory method detection limit

Notes:
1. Shaded values indicate the detected concentration exceeds the Pennsylvania Non-Residential Sub-Slab Soil Gas VI screening value.
2. Bold and italicized values indicate a non-detected result with the MDL greater than the screening value.

Acronyms and Abbreviations:
* = Site-Specific Non-Residential Vapor Intrusion screening value (applies to benzene and naphthalene).
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
µg/m^3 = microgram per cubic meter
Conc = concentration
ID = identification
MDL = method detection limit
NS = no Pennsylvania Department of Environmental Protection criteria established for this parameter
VI = vapor intrusion
RL = reporting limit

Laboratory Qualifiers:
J = The compound was detected; however, the concentration is below the laboratory method detection limit. so this concentration is estimated.
U = Concentraton was not detected at the reported detection limit for the sample.

Notes:
1. Soil concentrations reported in milligrams per kilogram (mg/kg)
2. SPLP results are reported in milligrams per liter (mg/L). The groundwater MSC for chromium is 0.1 microgram per liter (mg/L).
3. Chromium was not historically considered a site-related constituent of concern. For samples collected in 2021 and 2023, previously unreported chromium results were requested to be pulled from the archived report and were tabulated to support the 2024-2025 investigation.
4. Shaded = detected concentration in exceedance of Representative Pennsylvania Soil MSC.

Acronyms and Abbreviations:
- = not analyzed
-- = no standard established
bgs = below ground surface
Conc = concentration
MDL = method detection limit
MSC = Medium Specific Concentration
Q = qualifier
RL = reporting limit
SHS = Statewide Health Standard
SPLP = synthetic precipitation leaching procedure

Laboratory Qualifier:
U - Compound was undetected at the listed laboratory method detection limit.

Table 14b
Summary of Soil Sampling Results, Bartram's Garden Mile Trail
Alliance 51st Street LLC
1630 - 1646 South 51st Street
Philadelphia, Pennsylvania

Notes:
1. Concentrations are reported in micrograms per liter.
2. Shaded results indicate detected concentrations in exceedance of the Representative Pennsylvania Soil MSCs.

Acronyms and Abbreviations:
- = Data not available
-- = No Pennsylvania Department of Environmental Protection criteria established for this parameter.
bgs = below ground surface
Conc = concentration
ID = identification
MDL = method detection limit
mg/kg = milligram per kilogram
MSC = Medium Specific Concentration
ND = not detected
Q = qualifier
RL = reporting limit
USEPA = United States Environmental Protection Agency

Laboratory Qualifiers:
J = The compound was detected; however, the concentration is below the laboratory method detection limit. so this concentration is estimated.
U = The compound was undetected at the listed laboratory method detection limit.

Table 15
Summary of 2024 Surface Water Sampling Results
Alliance 51st Street LLC
1630-1646 South 51st Street
Philadelphia, Pennsylvania

Notes:

1. Constituents that have been detected at least once onsite during previous investigations, if available for 2024, are presented on table for informational purposes only. The primary goal of the investigation was to evaluate chromium species.
2. Shaded results exceed most stringent Pennsylvania Fish and Aquatic Life Criteria, for samples collected in the surface water body.
3. The estimated hardness of surface water is 127.35 (calculated using hardness calculator utilizing DEP51-W1 sample calcium and magnesium results).
4. ***Bold and italicized*** values indicate a non-detected result with the MDL greater than the criteria.
5. Samples SW-1, DEP51-W5 and DEP51-W6 were located in a drainage swale onsite. It is not considered to be a surface water body and would not support aquatic life.

Acronyms and Abbreviations:

- = no data available
-- = No PADEP Groundwater Quality Standard established for this criteria
µg/L - microgram per liter
Conc = concentration
GC/MS = gas chromatography / mass spectrometry
ID = identification
MDL = method detection limit
MSC = Medium Specific Concentration
PADEP = Pennsylvania Department of Environmental Protection
Q = qualifier
RL = reporting limit
SHS = Statewide Health Standard
SIM = selected ion monitoring

Laboratory Qualifiers:

J - The compound was detected; however, the concentration is below the laboratory method detection limit. Accordingly, this concentration is estimated.
U - Compound was undetected at the listed laboratory method detection limit.

	Site Boundary			SB-705 (3.5-4.0) *[5,430 mg/kg]*	

Notes:
1. Sample identification, depth, and concentration are presented in the table. For example, Pipe 22 (2 ft) [1,100 mg/kg] is sample Pipe 22 collected at a depth of 2 feet with a lead concentration of 1,100 mg/kg.
2. Chromium-related exceedances from samples collected outside the site boundary are not included in this table.
3. Italicized values indicate the result of the sample.

Acronyms and Abbreviations:
' = foot/feet
AST = aboveground storage tank
ft = foot/feet
GW = groundwater
mg/kg = milligram per kilogram
MSC = Medium Specific Concentration
NA = not applicable
SHS = Statewide Health Standards

Laboratory Qualifier:
J = The compound was detected; however, the concentration is below the laboratory method detection limit, so this concentration is estimated.

Appendix A

Notices and Correspondence

Appendix A-1: Act 2 and Storage Tank Program Correspondences

pennsylvania
DEPARTMENT OF ENVIRONMENTAL PROTECTION

February 22, 2022

Mr. Max Ryan
Alliance 51st Street LLC
40 Morris Avenue, Suite 230
Bryn Mawr, PA 19010

Re: Receipt of Notice of Intent to Remediate
Statewide Health Standard
Alliance 51st Street
eFACTS PF No. 855927
eFACTS Activity No. 57365
1646 South 51st Street
City of Philadelphia
Philadelphia County

Dear Mr. Ryan:

This letter acknowledges receipt of your Notice of Intent to Remediate (NIR) on February 14, 2022, pertaining to the subject property and submitted in accordance with the Land Recycling and Environmental Remediation Standards Act (Act 2). The procedures set forth in Act 2 must be followed in order for this site to qualify for the liability protection provided by the Act. If in the future you choose to select either the Site-Specific Standard or choose to use the special industrial area provisions in Subchapter E of the Chapter 250 regulations, you will need to resubmit the NIR and follow the requirements relating to public involvement plan coordination with the local municipality. Please contact this office if you need advice on these requirements.

A Final Report, accompanied by the required fee, should be submitted to the Department of Environmental Protection (DEP) upon completion of remediation. Include documentation verifying compliance with the public notification requirements.

Additional technical and program information can be found at www.dep.pa.gov, under Business>Land>Land Recycling. Also, please refer to the Land Recycling checklists which are helpful in assuring reports are complete before submittal. DEP uses the checklists to perform administrative and technical completeness reviews when plans and/or reports are submitted. It is strongly encouraged to include the appropriate completed checklist with your Final Report submission. Land Recycling checklists can also be found at the website under 'Forms, Checklists & Notifications' link.

Please refer to the enclosed Standard Attachment for considerations of other programs which may be applicable to this property.

Rebecca Flannery is the project officer assigned to your project and will be working with you towards the remediation of this property. Frequent contact is encouraged between your representatives and our staff. If you have any questions or need further clarifications of our procedures, please contact the project officer by email at rflannery@pa.gov or by telephone at 484.250.5779.

Sincerely,

C. David Brown, P.G. Digitally signed by C. David Brown, P.G.

Re: Site Characterization Report Disapproval
Storage Tank System Release 8/17/21
Facility ID No. 51-10420
Incident No. 56662
51st Street Terminal
1630 South 51st Street
City of Philadelphia

Dear Mr. Ryan:

The Department of Environmental Protection (DEP) has reviewed the November 3, 2022 document titled Site Characterization Report for the release referenced above. This document was prepared by Arcadis and submitted as a Site Characterization Report (SCR) as required by 25 Pa. Code Section 245.310(a). You selected the site-specific standard as the remediation standard in soil and groundwater.

In accordance with 25 Pa. Code Section 245.310(c), DEP disapproves the SCR based on the following:

1. The extent of soil contamination was not adequately characterized in accordance with 25 Pa. Code Section 245.309(b)(4) as required by 25 Pa. Code Section 245.310(a). Soil sample PIPE-29 has not been delineated for the benzene exceedance during the AST closure.

2. The extent of groundwater contamination was not adequately characterized in accordance with 25 Pa. Code Section 245.309(b)(4) as required by 25 Pa. Code Section 245.310(a). Lead (Pb) in groundwater has not been fully delineated in the vicinity of MW-9.

3. Results of a public and private well survey were not included in the SCR in accordance with 25 Pa Code 245.310(a)(19) There was no mention that a public and/or private well survey was performed.

4. An ecological receptor evaluation was not performed in accordance with 25 Pa. Code Section 245.310(a)(28). There were no results included in the SCR which confirmed there was an ecological receptor survey performed.

Based on this disapproval, you should correct the deficiencies and submit a revised SCR in keeping with 25 Pa. Code Section 245.310(c)(4).

Any person aggrieved by this action may appeal the action to the Environmental Hearing Board (Board), pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. § 7514, and the Administrative Agency Law, 2 Pa.C.S. Chapter 5A. The Board's address is:

Environmental Hearing Board
Rachel Carson State Office Building, Second Floor
400 Market Street
P.O. Box 8457
Harrisburg, PA 17105-8457

TDD users may contact the Environmental Hearing Board through the Pennsylvania Relay Service, 800.654.5984.

Appeals must be filed with the Board within 30 days of receipt of notice of this action unless the appropriate statute provides a different time. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

A Notice of Appeal form and the Board's rules of practice and procedure may be obtained online at http://ehb.courtapps.com or by contacting the Secretary to the Board at 717.787.3483. The Notice of Appeal form and the Board's rules are also available in braille and on audiotape from the Secretary to the Board.

IMPORTANT LEGAL RIGHTS ARE AT STAKE. YOU SHOULD SHOW THIS DOCUMENT TO A LAWYER AT ONCE. IF YOU CANNOT AFFORD A LAWYER, YOU MAY QUALIFY FOR FREE PRO BONO REPRESENTATION. CALL THE SECRETARY TO THE BOARD AT 717.787.3483 FOR MORE INFORMATION. YOU DO NOT NEED A LAWYER TO FILE A NOTICE OF APPEAL WITH THE BOARD.

IF YOU WANT TO CHALLENGE THIS ACTION, YOUR APPEAL MUST BE FILED WITH AND RECEIVED BY THE BOARD WITHIN 30 DAYS OF RECEIPT OF NOTICE OF THIS ACTION.

If you have any questions, please contact Rebecca Flannery by email at rflannery@pa.gov or by telephone at 484.250.5779.

Re: Site Characterization Report Approval
Storage Tank System Release August 17, 2021
Facility ID No. 51-10420
Incident No. 56662
51st Street Terminal
1630 South 51st Street
City of Philadelphia

Dear Mr. Ryan:

The Department of Environmental Protection (DEP) has reviewed the June 27, 2023 document titled "Site Characterization Report" amended September 26, 2023 for the release referenced above. This document was prepared by Arcadis and submitted as a Site Characterization Report (SCR) as required by 25 Pa. Code Section 245.310(a). You selected the site-specific standard as the remediation standard for soil.

DEP approves the SCR in accordance with 25 Pa. Code Section 245.310(c)(1).

25 Pa. Code Section 245.311 requires that a Remedial Action Plan (RAP) be submitted within 45 days of approval of the SCR. Failure to submit a RAP by that date may result in enforcement action by DEP.

Any person aggrieved by this action may appeal the action to the Environmental Hearing Board (Board), pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. § 7514, and the Administrative Agency Law, 2 Pa.C.S. Chapter 5A. The Board's address is:

Environmental Hearing Board
Rachel Carson State Office Building, Second Floor
400 Market Street
P.O. Box 8457
Harrisburg, PA 17105-8457

TDD users may contact the Environmental Hearing Board through the Pennsylvania Relay Service, 800.654.5984.

Appeals must be filed with the Board within 30 days of receipt of notice of this action unless the appropriate statute provides a different time. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

A Notice of Appeal form and the Board's rules of practice and procedure may be obtained online at http://ehb.courtapps.com or by contacting the Secretary to the Board at 717.787.3483. The Notice of Appeal form and the Board's rules are also available in braille and on audiotape from the Secretary to the Board.

IMPORTANT LEGAL RIGHTS ARE AT STAKE. YOU SHOULD SHOW THIS DOCUMENT TO A LAWYER AT ONCE. IF YOU CANNOT AFFORD A LAWYER, YOU MAY QUALIFY FOR FREE PRO BONO REPRESENTATION. CALL THE SECRETARY TO THE BOARD AT 717.787.3483 FOR MORE INFORMATION. YOU DO NOT NEED A LAWYER TO FILE A NOTICE OF APPEAL WITH THE BOARD.

IF YOU WANT TO CHALLENGE THIS ACTION, YOUR APPEAL MUST BE FILED WITH AND RECEIVED BY THE BOARD WITHIN 30 DAYS OF RECEIPT OF NOTICE OF THIS ACTION.

If you have any questions, please contact Rebecca Flannery by email at rflannery@pa.gov or by telephone at 484.250.5779.

Re: Remedial Action Plan Approval
Storage Tank System Release August 17, 2021
Facility ID No. 51-10420
Incident No. 56662
51st Street Terminal
1630 South 51st Street
City of Philadelphia

Dear Mr. Ryan:

The Department of Environmental Protection (DEP) has reviewed the November 2023 document titled Remedial Action Plan for the release referenced above. This document was prepared by Arcadis and submitted as a Remedial Action Plan (RAP) as required by 25 Pa. Code Section 245.311. You selected the site-specific standard as the remediation standard for soil and groundwater.

DEP approves the RAP in accordance with 25 PA Code Section 245.311(c)(1).

25 Pa. Code Section 245.312(a) requires that remedial action shall be implemented upon approval of the RAP according to the schedule contained in the RAP. Remedial action should, therefore, commence immediately upon receipt of this letter and proceed in accordance with the schedule in the RAP until the selected remediation standard is attained.

Remedial Action Progress Reports (RAPRs) must be submitted to DEP in accordance with 25 Pa. Code Section 245.312(b-d) by the 30th day of the month following the end of each quarter (April 30, July 30, October 30 and January 30). The final RAPR is submitted as part of the Remedial Action Completion Report. Your first RAPR should be submitted no later than June 21, 2024.

Failure to implement remedial action or submit complete progress reports in accordance with the schedule outlined above may result in enforcement action by DEP. If you wish to modify any part of this Remedial Action Plan or select a new remediation standard, you must prepare and submit a new or modified Remedial Action Plan to DEP in accordance with 25 Pa. Code Section 245.312(e).

Any person aggrieved by this action may appeal the action to the Environmental Hearing Board (Board), pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. § 7514, and the Administrative Agency Law, 2 Pa.C.S. Chapter 5A. The Board's address is:

Environmental Hearing Board
Rachel Carson State Office Building, Second Floor
400 Market Street
P.O. Box 8457
Harrisburg, PA 17105-8457

TDD users may contact the Environmental Hearing Board through the Pennsylvania Relay Service, 800.654.5984.

Appeals must be filed with the Board within 30 days of receipt of notice of this action unless the appropriate statute provides a different time. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

A Notice of Appeal form and the Board's rules of practice and procedure may be obtained online at http://ehb.courtapps.com or by contacting the Secretary to the Board at 717.787.3483. The Notice of Appeal form and the Board's rules are also available in braille and on audiotape from the Secretary to the Board.

IMPORTANT LEGAL RIGHTS ARE AT STAKE. YOU SHOULD SHOW THIS DOCUMENT TO A LAWYER AT ONCE. IF YOU CANNOT AFFORD A LAWYER, YOU MAY QUALIFY FOR FREE PRO BONO REPRESENTATION. CALL THE SECRETARY TO THE BOARD AT 717.787.3483 FOR MORE INFORMATION. YOU DO NOT NEED A LAWYER TO FILE A NOTICE OF APPEAL WITH THE BOARD. IF YOU WANT TO CHALLENGE THIS ACTION, YOUR APPEAL MUST BE FILED WITH AND RECEIVED BY THE BOARD WITHIN 30 DAYS OF RECEIPT OF NOTICE OF THIS ACTION.

If you have any questions, please contact Rebecca Flannery by email at rflannery@pa.gov or by telephone at 484.250.5779.

Sincerely,

Ragesh R. Patel

Our Ref: 30108678
Subject: Notice of Intent to Remediate
1646 South 51st Street
City of Philadelphia
Philadelphia County, Pennsylvania 19143

Dear Municipal and County Managers,

The Land Recycling and Environmental Remediation Standards Act, the Act of May 19, 1995, P.L. 4, No. 1995-2 (the "Act"), 35 P.S. §§ 6026.101 et seq., requires that a Notice of Intent to Remediate (NIR) be provided to the county and municipality in which a site entering the Act 2 program is located. Based on our records, both the City and County of Philadelphia operate from the same address at 1401 John F. Kennedy Blvd, Philadelphia, PA. In accordance with the provisions of the Act and on behalf of Alliance 51st Street LLC (Alliance), Arcadis U.S., Inc. is formally notifying you of Alliance's intent to remediate the subject site. A copy of the revised Notice of Intent to Remediate (NIR), which is being sent to the Pennsylvania Department of Environmental Protection (PADEP), Southeast Regional Office, is enclosed.

A notice of NIR submittal will also be published in the Philadelphia Inquirer newspaper on July 29, 2024, which serves the City of Philadelphia. Publication of this notice in the local newspaper initiates a 30-day public and municipal comment period. During this time, you may request to become involved in the development of the remediation plans for the Site. If you wish to become involved in this project or if you have any questions or need additional information regarding the proposed remediation, please feel free to contact me.

Sincerely,
Arcadis U.S., Inc.

NOTICE OF INTENT TO REMEDIATE

For DEP Use Only
PF # ____
Rem ID # ____

Date: July 23, 2024 NIR Status: ☐ New ☒ Revised

Act 1995-2 requires four general information items to be included in the NIR: the general location, listing of contaminants, intended use of property, and proposed remediation measures. In addition, indicate the standard(s) to be obtained and attach a scaled site map (if available). Certain project amendments or changes will require submission of a revised NIR, a new public notice, and a new notification to the municipality. Changes to information marked by (**) or (††) indicate when a new NIR and new public and municipal notices are needed. DEP should also be notified of any significant changes to the initial NIR submission, including the change of future use of the property, contaminants added or removed, change of standards from site-specific to background or Statewide health, any change in the media being investigated, or change of any contact information.

Contamination, Land Usage, and Proposed Remediation Section

Provide a brief description of the site contamination, to the extent known, in plain language (e.g., fuel oil spill, historical chemical industrial area, etc.), the current and intended future use of the property in the box below.

Organic compounds and lead are primarily associated with the former use of the property as a fuel oil terminal from approximately 1951- 2021 by companies including Allied Oil, Hess Oil & Chemical, Plains Products Terminals and PBF Logistics (PBF). PBF recently closed, demolished, and removed the aboveground storage tanks (ASTs). Soil borings in the former AST and piping area identified exceedances of the non-residential (NR) direct contact and/or soil to groundwater MSCs for volatile organic compounds, semivolatile organic componds, and lead. Groundwater samples from temporary wells had exceedances of the NR used aquifer GW MSCs for benzene, 1,2,4-trimethylbenzene, and lead. Hexavalent chromium is present due to the historic placement of fill onsite in the early 1900s. The site is intended for non-residential future use.

Provide a general description of proposed remediation measures.

The groundwater and soils at the site will be further characterized. The remedy for this site is expected to include, but not be limited to, implementation of a monitored natural attenuation program for groundwater and the filing of an environmental covenant.

Standards Selection Section

Check all the boxes that apply for the appropriate contaminant groups according to the standard(s) and media of the remediation to be performed.

NOTE: Either the site-specific standard or a special industrial area requires a 30-day public and municipal comment period.

"Pursuant to the Land Recycling and Environmental Remediation Standards Act, the Act of May 19, 1995, P.L. 4, No. 1995-2 (the "Act"), 35 P.S. §§ 6026.101 et seq., notice is hereby given that Alliance 51st Street LLC (Alliance) has submitted to the Pennsylvania Department of Environmental Protection (PADEP) a revised Notice of Intent to Remediate (NIR) for a site located at 1646 South 51st Street, in the City of Philadelphia, Philadelphia County, Pennsylvania. The site is currently vacant. Contaminants present in soil and groundwater are primarily associated with the historic use of the site as a petroleum terminal and filling of the site in the early 1900s. Contaminants present include volatile organic compounds, semivolatile organic compounds, and metals including lead, chromium, and hexavalent chromium. The NIR provides for additional investigative and/or remedial activities under the Act as necessary to obtain a relief of liability for any soil and groundwater contamination in accordance with a combination of Act 2 Statewide Health Standards and Site-Specific Standards. The proposed future use of the property will continue to be non-residential.

The Act provides for a 30-day public comment period for Site-Specific Standard remediations. The 30-day comment period is initiated with the publication of this notice. Until 30 days after this publication date, you may submit a request to Alliance to be involved in the development of the remediation and reuse plans for the site. You may also submit a request to Alliance during this 30-day comment period to develop and implement a public involvement plan. The address for comments is Alliance, c/o Arcadis U.S., Inc., **2100 Georgetown Drive, Suite 402, Sewickley, Pennsylvania 15143.** Copies of this request and any comments should also be submitted to the PADEP at **2 East Main Street, Norristown, Pennsylvania 19401."**

Subject: Notice of Intent to Remediate
1646 South 51st Street
City of Philadelphia
Philadelphia County, Pennsylvania 19143

Dear Ms. Rainford,

The Land Recycling and Environmental Remediation Standards Act, the Act of May 19, 1995, P.L. 4, No. 1995-2 (the "Act"), 35 P.S. §§ 6026.101 et seq., requires that a Notice of Intent to Remediate (NIR) be provided to the county and municipality in which a site entering the Act 2 program is located. In accordance with the provisions of the Act and on behalf of Alliance 51st Street LLC (Alliance), Arcadis U.S., Inc. is formally notifying you of Alliance's intent to remediate the subject site. A copy of the revised Notice of Intent to Remediate (NIR), which is being sent to the Pennsylvania Department of Environmental Protection (PADEP), Southeast Regional Office, is enclosed.

A notice of NIR submittal was published in the Philadelphia Inquirer newspaper on July 29, 2024, which serves the City of Philadelphia. Publication of this notice in the local newspaper initiates a 30-day public and municipal comment period. During this time, you may request to become involved in the development of the remediation plans for the Site. If you wish to become involved in this project or if you have any questions or need additional information regarding the proposed remediation, please feel free to contact me.

Sincerely,
Arcadis U.S., Inc.

Contamination, Land Usage, and Proposed Remediation Section

Provide a brief description of the site contamination, to the extent known, in plain language (e.g., fuel oil spill, historical chemical industrial area, etc.), the current and intended future use of the property in the box below.

Organic compounds and lead are primarily associated with the former use of the property as a fuel oil terminal from approximately 1951- 2021 by companies including Allied Oil, Hess Oil & Chemical, Plains Products Terminals and PBF Logistics (PBF). PBF recently closed, demolished, and removed the aboveground storage tanks (ASTs). Soil borings in the former AST and piping area identified exceedances of the non-residential (NR) direct contact and/or soil to groundwater MSCs for volatile organic compounds, semivolatile organic componds, and lead. Groundwater samples from temporary wells had exceedances of the NR used aquifer GW MSCs for benzene, 1,2,4-trimethylbenzene, and lead. Hexavalent chromium is present due to the historic placement of fill onsite in the early 1900s. The site is intended for non-residential future use.

Provide a general description of proposed remediation measures.

The groundwater and soils at the site will be further characterized. The remedy for this site is expected to include, but not be limited to, implementation of a monitored natural attenuation program for groundwater and the filing of an environmental covenant.

Standards Selection Section

Check all the boxes that apply for the appropriate contaminant groups according to the standard(s) and media of the remediation to be performed.

NOTE: Either the site-specific standard or a special industrial area requires a 30-day public and municipal comment period.

Subject:
Revised Act 2 Notice of Intent to Remediate
Alliance 51st Street Terminal
1646 South 51st Street
Philadelphia, Pennsylvania 19143

Dear Mr. Brown,

On behalf of Alliance, Arcadis U.S., Inc. (Arcadis) respectfully submits this revised Notice of Intent to Remediate (NIR) for the above referenced site.

Please find enclosed the NIR package, which includes proof of municipality and county notifications, and the newspaper publication posted on July 29, 2024. We are also sending a copy to the Philadelphia Department of Public Health today, in response to your email request. Arcadis will advise the Department if public comments are received during the 30-day Public Comment Period.

Arcadis looks forward to working with the Department to close this site in accordance with Act 2. If you have any questions, concerns, or would like to discuss this further, please don't hesitate to contact me.

Respectfully Submitted,

Arcadis U.S., Inc.

Our Ref: 30108678
Subject: Notice of Intent to Remediate
1646 South 51st Street
City of Philadelphia
Philadelphia County, Pennsylvania 19143

Dear Municipal and County Managers,

The Land Recycling and Environmental Remediation Standards Act, the Act of May 19, 1995, P.L. 4, No. 1995-2 (the "Act"), 35 P.S. §§ 6026.101 et seq., requires that a Notice of Intent to Remediate (NIR) be provided to the county and municipality in which a site entering the Act 2 program is located. Based on our records, both the City and County of Philadelphia operate from the same address at 1401 John F. Kennedy Blvd, Philadelphia, PA. In accordance with the provisions of the Act and on behalf of Alliance 51st Street LLC (Alliance), Arcadis U.S., Inc. is formally notifying you of Alliance's intent to remediate the subject site. A copy of the revised Notice of Intent to Remediate (NIR), which is being sent to the Pennsylvania Department of Environmental Protection (PADEP), Southeast Regional Office, is enclosed.

A notice of NIR submittal will also be published in the Philadelphia Inquirer newspaper on July 29, 2024, which serves the City of Philadelphia. Publication of this notice in the local newspaper initiates a 30-day public and municipal comment period. During this time, you may request to become involved in the development of the remediation plans for the Site. If you wish to become involved in this project or if you have any questions or need additional information regarding the proposed remediation, please feel free to contact me.

Sincerely,
Arcadis U.S., Inc.

NOTICE OF INTENT TO REMEDIATE

For DEP Use Only
PF # ____
Rem ID # ____

Date: July 23, 2024 NIR Status: ☐ New ☒ Revised

Act 1995-2 requires four general information items to be included in the NIR: the general location, listing of contaminants, intended use of property, and proposed remediation measures. In addition, indicate the standard(s) to be obtained and attach a scaled site map (if available). Certain project amendments or changes will require submission of a revised NIR, a new public notice, and a new notification to the municipality. Changes to information marked by (**) or (††) indicate when a new NIR and new public and municipal notices are needed. DEP should also be notified of any significant changes to the initial NIR submission, including the change of future use of the property, contaminants added or removed, change of standards from site-specific to background or Statewide health, any change in the media being investigated, or change of any contact information.

Property Name Alliance 51st Street.

July 29, 2024

** A change in municipality, the addition of a new municipality, or deciding to participate in the DEP/EPA One Cleanup Program requires a new NIR to be submitted with new public and municipal notifications.

Place the newspaper name and date that your notice of your plan/report submission was published
Philadelphia Inquirer; July 29, 2024

Contamination, Land Usage, and Proposed Remediation Section

Provide a brief description of the site contamination, to the extent known, in plain language (e.g., fuel oil spill, historical chemical industrial area, etc.), the current and intended future use of the property in the box below.

Organic compounds and lead are primarily associated with the former use of the property as a fuel oil terminal from approximately 1951- 2021 by companies including Allied Oil, Hess Oil & Chemical, Plains Products Terminals and PBF Logistics (PBF). PBF recently closed, demolished, and removed the aboveground storage tanks (ASTs). Soil borings in the former AST and piping area identified exceedances of the non-residential (NR) direct contact and/or soil to groundwater MSCs for volatile organic compounds, semivolatile organic componds, and lead. Groundwater samples from temporary wells had exceedances of the NR used aquifer GW MSCs for benzene, 1,2,4-trimethylbenzene, and lead. Hexavalent chromium is present due to the historic placement of fill onsite in the early 1900s. The site is intended for non-residential future use.

Provide a general description of proposed remediation measures.

The groundwater and soils at the site will be further characterized. The remedy for this site is expected to include, but not be limited to, implementation of a monitored natural attenuation program for groundwater and the filing of an environmental covenant.

Standards Selection Section

Check all the boxes that apply for the appropriate contaminant groups according to the standard(s) and media of the remediation to be performed.

NOTE: Either the site-specific standard or a special industrial area requires a 30-day public and municipal comment period.

COPY OF ADVERTISEMENT

"Pursuant to the Land Recycling and Environmental Remediation Standards Act, the Act of May 19, 1995, P.L. 4, No. 1995-2 (the "Act"), 35 P.S. §§ 6026.101 et seq., notice is hereby given that Alliance 51st Street LLC (Alliance) has submitted to the Pennsylvania Department of Environmental Protection (PADEP) a revised Notice of Intent to Remediate (NIR) for a site located at 1646 South 51st Street, in the City of Philadelphia, Philadelphia County, Pennsylvania. The site is currently vacant. Contaminants present in soil and groundwater are primarily associated with the historic use of the site as a petroleum terminal and filling of the site in the early 1900s. Contaminants present include volatile organic compounds, semivolatile organic compounds, and metals including lead, chromium, and hexavalent chromium. The NIR provides for additional investigative and/or remedial activities under the Act as necessary to obtain a relief of liability for any soil and groundwater contamination in accordance with a combination of Act 2 Statewide Health Standards and Site-Specific Standards. The proposed future use of the property will continue to be non-residential.

The Act provides for a 30-day public comment period for Site-Specific Standard remediations. The 30-day comment period is initiated with the publication of this notice. Until 30 days after this publication date, you may submit a request to Alliance to be involved in the development of the remediation and reuse plans for the site. You may also submit a request to Alliance during this 30-day comment period to develop and implement a public involvement plan. The address for comments is Alliance, c/o Arcadis U.S., Inc., **2100 Georgetown Drive, Suite 402, Sewickley, Pennsylvania 15143.** Copies of this request and any comments should also be submitted to the PADEP at **2 East Main Street, Norristown, Pennsylvania 19401."**

Sewickley, PA 15143

Dear Ms. Foster:

Recently, the City of Philadelphia Department of Public Health, Environmental Engineering Unit received a Notice of Intent to Remediate (NIR) from your firm, under the provisions of the Pennsylvania Land Recycling and Environmental Remediation Standards Act (Act 2) regarding the property located at **1646 South 51st Street**, Philadelphia, Pennsylvania (19143).

Through the Notice of Intent (NIR) provisions of Act 2, the City of Philadelphia hereby requests that you develop a Public Involvement Plan (PIP) for this site. This request is made in accordance with the internal procedures first developed by the City in 2003 for this purpose. These procedures recommend our municipality request a PIP if the project is in close proximity or adjacent to residential, educational (schools/daycare), medical, religious, recreational and park properties. Since this property is in close proximity to residential properties, we are obligated to request a PIP. In addition to the reason above, members of the interdepartmental review team which reviews NIRs submitted to the City have recommended a PIP in this instance.

The venue for this PIP will be an appropriately publicized meeting of interested parties (impacted community and businesses) you will host to discuss this site, to be held at a suitable location and time, allowing interested parties to attend. An approximate 30 days advance notice of the meeting must be provided, during which time all relevant sampling and background investigation material should be made available for public inspection at a suitable location, such as the nearest school or public library.

The meeting would focus on the following:

- Identity, location and concentration of contaminants and hazardous substances found in sampling events at the site;
- Any potential health effects of those contaminants, based on locations and concentrations noted;
- Measures to be taken to protect the community, workers and recreation areas from possible exposure;
- Further definition of the remediation methodology to be employed;
- Discussion of specific procedures, such as dust control, sedimentation, and erosion control.

Following the meeting, all supplemental material, which will include presentation materials, attendance list, and questions and answers will append the material provided earlier, which will be given to PA DEP, with a copy to the City.

Please notify the Department of Public Health in writing of the date, time and location of the public meeting, and the location of the document depository as noted above.

Please note that this PIP request has nothing to do with the perceived value and need of this development for the community and the City. We assume that you have already had several meetings with the community, elected officials, and others on the benefits of this development. This PIP request is specifically concerned with final questions regarding the proposed remediation to be employed on the site in its current condition. Accordingly, your presentation can be geared specifically to the remediation strategy, and the questions noted above.

Should you have any questions, please contact Leigh Anne Rainford of our Department's Environmental Engineering section at 215-685-7497 or at LeighAnne.Rainford@Phila.gov.

Best regards,

Frank A. Franklin, PhD, JD, MPH, FCPP

Statewide Health (Non-Residential)/Site-Specific Standards
Alliance 51st Street, a.k.a. 51st Street Terminal, PBF Logistics Products Terminal, Plains Products Terminals, Allied Oil Company, Hess Oil & Chemical Corporation
eFACTS PF No. 855927
eFACTS Activity Nos. 60376 and 60377
1646 South 51st Street
City of Philadelphia
Philadelphia County

Dear Mr. Ryan:

This letter acknowledges receipt of your Notice of Intent to Remediate (NIR) on July 30, 2024, pertaining to the subject property and submitted in accordance with the Land Recycling and Environmental Remediation Standards Act (Act 2). The procedures set forth in Act 2 must be followed in order for this site to qualify for the liability protection provided by the Act. The Department of Environmental Protection (DEP) will not accept plans and reports until after the 30-day comment period following submission of the NIR ends.

The 30-day comment period following submission of the NIR allows the municipality the opportunity to request to be involved in the development of remediation and reuse plans for the property. If the municipality requests a public involvement plan, any comments and responses must be included in any subsequent Site-Specific Standard reports. Remedial investigation reports, risk assessment reports, cleanup plans, and final reports submitted to DEP under the site-specific standard need to be accompanied by the required fees and documentation verifying compliance with the public notification requirements.

Additional technical and program information can be found at www.dep.pa.gov (Business>Land>Land Recycling). Also, please refer to the Land Recycling checklists which are helpful in assuring reports are complete before submittal. DEP uses the checklists to perform administrative and technical completeness reviews when plans and/or reports are submitted. It is strongly encouraged to include the appropriate completed checklist with your Final Report submission. Land Recycling checklists can also be found at the website under 'Forms, Checklists & Notifications' link.

Please refer to the Standard Attachment for considerations of other programs which may be applicable to this property.

Mr. Matthew Sabetta is the project officer assigned to your project and will be working with you towards the remediation of this property. Frequent contact is encouraged between your representatives and our staff. If you have any questions or need further clarifications of our procedures, please contact the project officer by e-mail at msabetta@pa.gov or by telephone at 484.250.5788.

Sincerely,

RE: City Comments on the Alliance 51st Street Public Involvement Plan for 1646 South 51st Street, Philadelphia, PA 19143

Dear Mr. Brunt:

Following review of the draft Public Involvement Plan (PIP) submitted by Alliance 51st Street LLC (Alliance) to the City of Philadelphia (City) on December 4th, 2024, the City submits the following comments on the PIP:

1. The City recommends the inclusion of the date and location of the most recent Hexavalent Chromium release within the *Site Location and History* section of the PIP. This will provide important context for proposed PIP activities to community members.
2. The City recommends the use of alternate sites for the public meeting and document repository. The Walnut Street West Library is over 1.5 miles from the site and is not easily accessible by public transit for individuals with limited mobility. Specifically, there is no direct bus route from the site to the library and attendees would have to walk over 0.25 miles from the nearest trolley station. In addition, parking around the library is very limited. Potential alternative locations for the meeting and repository include Bartram's Garden or the Bartram's Housing Development. Both are within walking distance of the site, have available parking, and are widely accessible to residents living in the neighborhood immediately surrounding the Alliance property.
3. The City requests the publication of an online repository to increase accessibility of project documents. Given that Alliance 51st has proposed the use of an online meeting platform, an online database would ensure that all residents participating in PIP activities, whether virtually or in-person, have easy access to relevant information. .

4. The City requests a copy of any documents housed in the repository be sent via email to LeighAnne.Rainford@phila.gov.
5. The City requests that activities and documents be presented in an accessible format to account for the diverse members of the public. This may include using plain language summaries of important information and translation of printed materials and live events. Spanish, Arabic, and French, Haitian or Cajun, are common languages in this area.
6. The City recommends that community feedback on proposed remediation methods be legitimately considered and included in final site plans. The City also recommends that community concerns be addressed both at community meetings and in comment-response documents. True public participation occurs when affected parties, including residents, are meaningfully included in decision-making processes, and not merely informed of decisions after they are made.

We appreciate your consideration of these suggestions and look forward to reviewing the next iteration of the PIP. Please forward any questions regarding these comments to Leigh-Anne Rainford.

Sincerely,

Palak Raval-Nelson, PhD, MPH

Ms. Foster,

The City appreciates Alliance 51st Street, LLC's ("Alliance") commitment to developing a robust public involvement plan regarding the ongoing remediation at 51st Alliance Street. However, the City remains concerned that the site for the proposed public meeting is too far away from the Alliance site. We strongly encourage Alliance to move the public meeting to Bartram's Garden or the Bartram's Garden Housing Development, where members of the public most directly effected by the remediation can more easily attend the meeting. Additionally, the City encourages Alliance to also utilize Bartram's Garden for the information repository, since it is within easy, accessible walking distance of both the site and immediately adjacent neighbors.

These comparatively small changes to the proposed public involvement plan would make a big difference to the community and ensure that meaningful public participation is achieved.

Thank you.

Subject: Notice of Submittal of Act 2 Report
1630 - 1646 South 51st Street
City of Philadelphia
Philadelphia County, Pennsylvania 19143

Dear Municipal and County Managers,

In accordance with the Land Recycling and Environmental Remediation Standards Act, the Act of May 19, 1995, P.L. 4, No. 1995-2 (Act 2) and on behalf of Alliance 51st Street LLC (Alliance), Arcadis U.S., Inc. is formally notifying you that Alliance is submitting to the Pennsylvania Department of Environmental Protection (PADEP), Southeast Regional Office, a Remedial Investigation Report and Cleanup Plan (report) for the above-referenced site. The report demonstrates that remediation conducted and planned for the site will be in attainment with a combination of Act 2 non-residential Statewide Health Standards and Site-Specific Standards. You will be provided with a copy of the report when it is submitted to PADEP.

A notice of report submittal will also be published in the Philadelphia Inquirer newspaper on February 11, 2025, which serves the City of Philadelphia. In accordance with the January 2025 Public Involvement Plan, publication of this notice in a local newspaper and submittal of the report initiates a 30-day public and municipal comment period. Following the public comment period, a public meeting will be held to present the information in the report. A separate notice will be published that provides details of the public meeting.

If you have any questions or comments, please feel free to contact me.

Sincerely,
Arcadis U.S., Inc.

February - March 2025 Correspondences

Pennsylvania
Department of Environmental Protection

February 28, 2025

Mr. Max Ryan
Alliance 51st Street, LLC
40 Morris Avenue, Suite 230
Bryn Mawr, PA 19010

Re: Letter of Technical Deficiency
Alliance 51st Street
eFACTS PF No. 855927
eFACTS Activity No. 60376
1646 South 51st Street
City and County of Philadelphia

Dear Mr. Ryan:

The Department of Environmental Protection (DEP) has received and reviewed the February 2025 document titled "Act 2 Remedial Investigation Report and Cleanup Plan" (report), received on February 14, 2025, for the property referenced above. The report was prepared by Arcadis U.S., Inc. and submitted to DEP in accordance with the Land Recycling and Environmental Remediation Standards Act (Act 2), and it constitutes a remedial investigation report and cleanup plan as defined in Chapter 3.

The procedures and regulations set forth in Act 2 must be followed in order for your site to qualify for the liability protection provided by the Act. Upon initial review, DEP finds the submission is technically deficient and the following items are needed to complete your submission:

1. A professional seal is missing from the signature page of the report. The report must include a professional seal in accordance with 25 Pa. Code Section 250.12.

2. The procedures outlined in the Public Involvement Plan dated January 21, 2025 were not followed for this submission. The public notifications consisting of the newspaper ad and municipal letter do not include information for where or how the public can access the report for review. 25 Pa. Code Section 250.6(c); 35 P.S. Section 6026.304(o)

3. On February 20, 2025 Arcadis informed DEP that the online document repository referenced in the Public Involvement Plan did not yet exist. Therefore, the reports are not readily accessible by the public for review and comment. 25 Pa. Code Section 250.6(c); 35 P.S. Section 6026.304(o)

4. The report does not include documentation of appropriate public outreach in accordance with the Public Involvement Plan. The report needs to include, at a minimum, information documenting the outreach to the individuals and groups listed in Section 2.1

of the Public Involvement Plan dated January 21, 2025. 25 Pa. Code Section 250.6(c); 35 P.S. Section 6026.304(o).

Note that because of the above deficiencies, DEP has not performed a technical review of the report.

The following items are comments on the submission and are not considered deficiencies. Each one should be addressed in your response.

i. The transmittal sheet for the report does not have the correct report categories checked.
ii. The municipal notification for the city should have been sent to City of Philadelphia Health Department and included information for how they can access the report.
iii. Section 2 of the January 21, 2025 Public Involvement Plan states that comments from the public "will be submitted to the PADEP no later than 45 days after the close of the public comment period." This timeframe does not seem to allow the Department enough time to thoroughly review all comments and their responses. Comments and responses must be submitted to the Department no later than four weeks (28 days) prior to the end of the 90-day regulatory review period to allow enough time for review. Please revise the Public Involvement Plan to account for this change.
iv. Provide the date that the report was made available to the public at the Walnut Street West Library.

Please address the above summarized technical deficiencies within 60 days. If the deficiencies noted above are corrected and a report resubmitted to DEP within 60 days, it will not be necessary to resubmit report review fees, resend the municipal notice, or republish the public notice. Please include a copy of this correspondence with any resubmission to confirm to DEP staff that an administrative completeness check is not necessary. If the corrected report is resubmitted later than 60 days from the date of this letter, the resubmitted report will need to include the appropriate fees and proofs of municipal and public notices.

We look forward to assisting you in the remediation of this property and encourage you to contact us throughout this process. If you have any questions or need further information regarding this matter, please contact Matthew Sabetta by email at msabetta@pa.gov or by telephone at 484.250.5788.

Any person aggrieved by this action may appeal the action to the Environmental Hearing Board (Board), pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. § 7514, and the Administrative Agency Law, 2 Pa.C.S. Chapter 5A. The Board's address is:

Environmental Hearing Board
Rachel Carson State Office Building, Second Floor
400 Market Street
P.O. Box 8457
Harrisburg, PA 17105-8457

TDD users may contact the Environmental Hearing Board through the Pennsylvania Relay Service, 800.654.5984.

Appeals must be filed with the Board within 30 days of receipt of notice of this action unless the appropriate statute provides a different time. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

A Notice of Appeal form and the Board's rules of practice and procedure may be obtained online at http://www.ehb.pa.gov or by contacting the Secretary to the Board at 717.787.3483. The Notice of Appeal form and the Board's rules are also available in braille and on audiotape from the Secretary to the Board.

IMPORTANT LEGAL RIGHTS ARE AT STAKE. YOU SHOULD SHOW THIS DOCUMENT TO A LAWYER AT ONCE. IF YOU CANNOT AFFORD A LAWYER, YOU MAY QUALIFY FOR FREE PRO BONO REPRESENTATION. CALL THE SECRETARY TO THE BOARD AT 717.787.3483 FOR MORE INFORMATION. YOU DO NOT NEED A LAWYER TO FILE A NOTICE OF APPEAL WITH THE BOARD.

IF YOU WANT TO CHALLENGE THIS ACTION, YOUR APPEAL MUST BE FILED WITH AND RECEIVED BY THE BOARD WITHIN 30 DAYS OF RECEIPT OF NOTICE OF THIS ACTION.

Sincerely,

C. David Brown, P.G.

Subject: Notification of Public Meeting Postponement
1630 - 1646 South 51st Street
City of Philadelphia
Philadelphia County, Pennsylvania 19143

Dear Municipal and County Managers,

In accordance with the Land Recycling and Environmental Remediation Standards Act, the Act of May 19, 1995, P.L. 4, No. 1995-2 (Act 2) and on behalf of Alliance 51st Street LLC (Alliance), Arcadis U.S., Inc. is formally notifying you that the public meeting that was previously scheduled for March 25, 2025 at the Walnut Street West Library, located at 201 South 40th Street in Philadelphia, to discuss the above-referenced Site, will be postponed. The meeting location will also change.

A notice cancelling the March 25th meeting will be published in the Philadelphia Inquirer on March 19, 2025. Information regarding the public meeting and the revised Public Involvement Plan and revised Remedial Investigation Report and Cleanup Plan that will be submitted to the Pennsylvania Department of Environmental Protection (PADEP), Southeast Regional Office, will be published at a later date.

A new document repository will be maintained at the Bartram's Garden Welcome Center, and an online document repository is located at https://alliance51ststreet.com. The next newspaper publication will provide details on the document repositories as well.

If you have any questions or comments, please feel free to contact me.

Sincerely,
Arcadis U.S., Inc.

Subject: RE: Alliance 51St Street Site - Public Meeting Cancellation
Attachments: Alliance 51St Street_Public Meeting Cancellation_City and County Notification.pdf

ARCADIS

Good morning, Ms. Rainford,
Please find attached the notification of the cancellation of the March 25, 2025 public meeting for the 51St Street Act 2 Site. The entities listed in the Public Involvement Plan are copied on this email. Separate notices will be sent once the meeting is scheduled at the new location: the Richard Allen Preparatory Charter School. Please reach out with any questions. Thank you.

All,

DEP supports holding the public meeting at the Richard Allen Preparatory Charter School and making documents publicly available at Bartram's Garden. Thanks to everyone for helping to make this happen. I've copied Leigh Anne from the city Department of Public Health so she's aware of this solution.

Oh yes, I had almost forgotten that Zach said it would be acceptable to house the document repository there! I really appreciate it, and now it may be more appropriate to move it from the library. I'll pause until we have PADEP concurrence on the proposed changes.
Thank you Maitreyi!

Hello Crystal,
Glad that the meeting can be closer in the community, appreciate your following up with Dominique. And many thanks to Richard Allen for making their space available. On the issue of the hard copy document repository, it may be easier to have that at the Garden since we are a block away from Richard Allen School. I don't want to

speak for the school but the general public may find it easier to drop by our welcome center which has regular open hours seven days a week starting April 1 for the 2025 season. Just an offer.
Best regards, Maitreyi

Hello Dominique,
We greatly appreciate your support! Do you have a projector, microphone, etc.? Can you tell me the capacity of the room? We can't schedule this yet, as we still need to revise the Public Involvement Plan and send out new notices.

I have a follow-up question as well. We must retain a hard copy document repository of our reports. We started this at the library, but would you be comfortable keeping it at the school? It needs to be accessible to the public, so I'm not sure if you are comfortable with this. If not, I believe we can keep it at the library.

Mr. Brown, would DEP accept the hard copy repository being kept at a separate location than the meeting? If you would like to move forward with the school, we'll update the Public Involvement Plan appropriately.
Thank you everyone.

Hi David and Crystal,

Thank you, Caroline, for the introduction.

David and Crystal, I'm happy to support hosting this meeting at RAPCS. Do you have a date in mind for early April? Also, please share the projected start and end time so we can make the necessary arrangements.

Looking forward to finalizing the details with you!

Best,
Dominique

> Hello from Bartram's Garden! I'm pleased to introduce you here by cc to Ms. Dominique Johnson, the Communications and Community Outreach Manager at Richard Allen Preparatory Charter School located just blocks from the Garden at 2601 S. 58th Street. Ms. Johnson and the school's CEO, Larry Jones, have graciously agreed that RAPCS can host the required public meeting in early April on a weeknight evening. They have appropriate indoor space for a meeting of this size, and—importantly—the school also has a parking lot and is easily accessible by public transit.
>
> I know many of us were concerned about the earlier proposal for the meeting to take place at the Walnut Street West library, which is nearly two miles from the impacted site and doesn't have parking or easy transit access, so we're hoping that moving the plans to the school will make it far easier for neighbors to participate.

Ms. Johnson is ready to hear from you on desired date options and the projected start and end time of the meeting. Once you have the details settled with her, we'll look forward to receiving final confirmation so that we can share the news with our neighbors and partners.

Many thanks, and looking forward,

Caroline

Date: March 19, 2025
Our Ref: 3108678
Subject: Response to Letter of Technical Deficiency and Submittal of Revised Public Involvement Plan
Alliance 51st Street
eFACTS PF No. 855927
eFACTS Activity No. 60376
1646 South 51st Street
City and County of Philadelphia

Dear Mr. Brown,

On behalf of the Alliance 51st Street, LLC (Alliance), Arcadis U.S., Inc. (Arcadis) is in receipt of the Department of Environmental Protection (DEP) February 28 2025 Letter of Technical Deficiency on the "Act 2 Remedial Investigation Report and Cleanup Plan" (report), submitted on February 14, 2025, for the property referenced above. DEP comments are listed below. Arcadis' responses and proposed next steps are provided in bold/italic font.

Comment 1:

A professional seal is missing from the signature page of the report. The report must include a professional seal in accordance with 25 Pa. Code Section 250.12.

Response to Comment 1:

Following DEP concurrence on this response, the report will be resubmitted to the online platform with the P.G.'s seal.

Comment 2:

The procedures outlined in the Public Involvement Plan dated January 21, 2025 were not followed for this submission. The public notifications consisting of the newspaper ad and municipal letter do not include information for where or how the public can access the report for review. 25 Pa. Code Section 250.6(c); 35 P.S. Section 6026.304(o).

Response to Comment 2:

Due to the logistical challenges of setting up a new website and finalizing the location of the Information Repository in time to meet the Act 2 report submittal date that was previously agreed upon with PADEP, public notices included contact information (crystal.foster@arcadis.com) for members of the community

to obtain documents while the website was being set up. Since then, the online repository has been established at https://www.alliance51ststreet.com. Entities in the PIP were advised of the website on March 18, 2025. The public will be notified as proposed below.

Comment 3:

On February 20, 2025 Arcadis informed DEP that the online document repository referenced in the Public Involvement Plan did not yet exist. Therefore, the reports are not readily accessible by the public for review and comment. 25 Pa. Code Section 250.6(c); 35 P.S. Section 6026.304(o).

Response to Comment 3:

The online repository has been formalized at https://www.alliance51ststreet.com and is now available to anyone. The PIP has been revised PIP and attached hereto and will be submitted to the contacts listed in Table 1 of Section 2.2 of the revised PIP. Public notices be resent and will include emails to the contacts listed in Table 1 of Section 2.2 of the revised PIP and will provide details on the new public comment period and the document repositories. The proposed public notices are attached for DEP concurrence. They will be published at the time the revised RIR/CP is uploaded to PADEP to provide the required thirty (30) day notice.

Comment 4:

The report does not include documentation of appropriate public outreach in accordance with the Public Involvement Plan. The report needs to include, at a minimum, information documenting the outreach to the individuals and groups listed in Section 2.1 of the Public Involvement Plan dated January 21, 2025. 25 Pa. Code Section 250.6(c); 35 P.S. Section 6026.304(o).

Response to Comment 4:

Following submittal of the January 2025 Public Involvement Plan to the City of Philadelphia, the City advised Arcadis that any City correspondence should be routed through Ms. LeighAnne Rainford. However, to address the comment, Arcadis will provide email notification of the availability of each document placed in the Arcadis platform to each individual listed in Table 1 of Section 2.2 of the revised PIP and will document the outreaches. Copies of the emails that are sent to recipients in revised Table 1 will be saved and filed.

The list in revised Table 1 is all inclusive of required recipients. The following items are comments on the submission and are not considered deficiencies. Each one should be addressed in your response.

a. The transmittal sheet for the report does not have the correct report categories checked.
    a. ***Response: This oversight will be corrected in the resubmittal of the report.***
b. The municipal notification for the city should have been sent to City of Philadelphia Health Department and included information for how they can access the report.
    a. ***Response: An additional email for the Health Department has been added to Table 1 in Section 2.2 of the PIP and they will be advised of report submittals and information repositories in addition to the notifications that are sent to Ms. Rainford.***
c. Section 2 of the January 21, 2025 Public Involvement Plan states that comments from the public "will be submitted to the PADEP no later than 45 days after the close of the public comment period." This timeframe does not seem to allow the Department enough time to thoroughly review all comments and their responses. Comments and responses must be submitted to the Department no later than four weeks (28 days) prior to

the end of the 90-day regulatory review period to allow enough time for review. Please revise the Public Involvement Plan to account for this change.

   a. ***Response: This change has been made to the revised PIP, see attached.***

d. Provide the date that the report was made available to the public at the Walnut Street West Library.

   a. ***Arcadis was awaiting communication from the library, as well as translation documents for the RIR/CP Summary, before sending hard copies to the library. To build the repository while the completion of the documents takes place, the RIR/CP was sent to the library on March 3, 2025. A new hard copy repository will be established at Bartam's Garden. The library will no longer be used with the change in venue and has been advised of the change.***

Arcadis requests that DEP consider the deficiency comments to be addressed through this response and the attached revised PIP (in track changes to facilitate your review). Based on communications with Bartram's Garden, the Richard Allen Preparatory Charter School, and DEP, the locations of both the public meeting and hard copy document repository have changed. Cancellation of the March 25, 2025 public meeting is being published in the Philadelphia Inquirer today (March 19, 2025) and entities in Table 1 of the PIP were advised of the cancellation on March 18, 2025. Appendix A of the revised RIR/CP will be updated with the public outreach related to the meeting cancellation and revised report submittals. With approval of these responses and the revised PIP, the fully revised RIR/CP will be reuploaded to the PADEP platform and a public notification will be sent that provides the locations of public meeting and document repositories. The proposed public notices are attached for PADEP agreement.

.

Sincerely,
Arcadis U.S., Inc.

1 Introduction

On behalf of Alliance 51st Street LLC (Alliance), Arcadis U.S., Inc. (Arcadis) prepared this Public Involvement Plan (PIP) to present a framework for informing and involving the public and other parties that may be interested in remediation plans for the property located at 1646 South 51st Street in Philadelphia, Pennsylvania 19143 (site; Figure 1). This PIP was prepared in accordance with the Pennsylvania Department of Environmental Protection (PADEP) requirements of Title 25, Chapter 250, 25 Pennsylvania Code §§ 250.5 and 250.6, known as Act 2. This PIP will be followed for each Act 2 report submitted to PADEP for the Site. The anticipated schedule of activities is presented in Attachment A.

1.1 Site Location and History

The Site is in Philadelphia County, in the City of Philadelphia. Alliance 51st Street LLC acquired the Site from PBF Logistics Terminals LLC (PBF Logistics) in December 2021. PBF Logistics purchased the Site in 2016 from Plains Products Terminals LLC. Allied Oil Co. Hess Oil & Chemical Corporation operated the Site prior to Plains Products Terminals LLC. The main Site primarily operated as a petroleum product terminal (from approximately 1951 to 2021); historically, the Site also was used for lumber storage (in 1923 prior to development), and as a cardboard container manufacturer (from approximately 1923 to 1945).

According to historical resources, fifteen aboveground storage tanks (ASTs) were constructed at the Site between 1951 and 1975 as part of the operations for Allied Oil Co. (Allied) and later Hess Oil & Chemical Corporation Fuel Oil Terminal (Hess). Locations of the former ASTs are shown on Figure 2. The ASTs, loading racks, and associated piping were removed as part of the AST closure activities and the tank foundations, concrete and soil containment berms, and miscellaneous buildings have been removed as part of the redevelopment activities.

The northwestern portion of the Site previously contained three buildings and a canopy area, which have been demolished. The areas around the buildings are paved with asphalt. The remainder of the Site is mostly covered with gravel, although some areas in the vicinity of former buildings are paved.

A large soil pile (estimated at ~25,000 cubic yards and 20 feet high) was located on the eastern portion of the Site. While the origin of the soil could not be confirmed, the presence of the stockpile appears to coincide with the installation of the ASTs on the Site. The soil was likely excavated from the southwestern portion of the Site during the construction of the ASTs. During the recent redevelopment activities, some of the soil has been spread across the property as part of the grading of site.

Organic compounds and lead are present in site media, primarily associated with the former use of the property as a fuel oil terminal. Soil borings in the former AST and piping area identified exceedances of Pennsylvania Department of Environmental Protection (PADEP) soil Medium Specific Concentrations (MSCs) for volatile organic compounds, semivolatile organic componds, and lead. Groundwater samples from permanent monitoring wells have exceedances of groundwater MSCs for benzene and lead associated with the former terminal operations. Hexavalent chromium also is present in soil and groundwater due to the historic placement of fill onsite in the early 1900s.

The site has recently undergone environmental investigations. An Act 2 Notice of Intent to Remediate (NIR) was submitted to the PADEP in February 2022 and proposed attainment of PADEP statewide health standards (SHS). In April 2024, the Philadelphia Water Department ~~observed~~ responded to a report of yellow-colored water leaving the Site, near the Bartram's Garden Mile Trail. Upon further investigation it was determined that the water contained chromium and hexavalent chromium. From a review of historical materials, the presence of chromium onsite is due to the historical placement of fill across the Site in the early 1900s. However, as determined by

sampling by Alliance and PADEP, chromium and hexavalent chromium are also present offsite at locations not impacted by the Site. Alliance has taken measures to eliminate any chromium originating from the Site.

A revised NIR was submitted in July 2024 proposing attainment of a combination of SHS and site-specific standards (SSS); which will be demonstrated following further investigation. The future intended use of the site is non-residential. Deed restrictions will be put into place that will memorialize site use restrictions.

1.2 Purpose

The goal of this PIP is to facilitate communication and interaction among Alliance, Arcadis, the local community, PADEP, and other interested parties and organizations regarding the status of the remedial investigation and site closure activities. To accomplish this goal, Arcadis has organized several public involvement opportunities, including:

- Public meetings, as needed, near the site
- Maintenance of a site mailing list
- Establishment of an online information repository for public access of documents
- Designation of a contact person for community questions

These activities are described further in Section 3.

2 Public Involvement Activities

This section discusses the public involvement opportunities established to inform the public about remedial investigation and closure activities at the site. Act 2 reports will be submitted to the interested parties at the same time as submitted the PADEP, to allow for the 30-day public comment period. Following the public comment period, a response to comments, if any, and an amended report, as necessary, will be submitted to the PADEP no later than four weeks (28 days) prior to the end of the 90-day regulatory review period.~~45 days after the close of the public comment period.~~

2.1 Public Meeting

A public meeting will be held promptly after the 30-day public period for the first Act 2 report (the Remedial Investigation Report and Cleanup Plan) is submitted to the PADEP. Following the public meeting, a response to comments and an amended report, as necessary, will be submitted to the PADEP no later than 45 days after the date of the public meeting.

The objective of a public meeting or hearing will be to discuss activities planned or proposed for the Site, and to gather feedback from the community, local leaders, and other interested parties. A public meeting will be organized by Alliance and/or Arcadis in response to the request by the City of Philadelphia.

The public meeting will be scheduled for a weeknight evening to maximize the potential for interested parties to attend. The meeting will be designed to be informal and interactive so that attendees can hear key findings from project reports and discuss issues during a question-and-answer period. Most of the meeting time will be devoted to discussion of project status and issues, which will help interested parties remain informed and involved in

project activities, and track progress toward the achievement of overall project goals. Based on the request from the City of Philadelphia, the following topics will be discussed in the meeting:

- Location and concentration of contaminants identified at the Site;
- Potential health effects of the contaminants based on the concentrations;
- Measures that will be implemented to protect the community;
- Remedial measures that will be implemented to address the contaminants; and
- Procedures to be implemented during redevelopment to minimize dust and control erosion.

Public notice of the meeting will be given at least 30 days prior to the meeting by placing a notice in the local newspaper (the Philadelphia Inquirer). Notice of the public meeting will also be made directly to local civic associations (e.g., the township historical commission) and state and municipal representatives, in addition to the newspaper advertisement. Act 2 documents will be made available to the public at least 30 days prior to the meeting, and the newspaper advertisement will provide details on the location of the information repository.

To facilitate the notification process, an attendance sign-in log will be made available during public meeting to gather names and contact information for those who wish to be added to the site mailing list for use in future notifications.

Multiple locations including the Bartram's Garden facility were evaluated for the public meeting considering users of the trail, accessibility, logistics, and accommodations. In consideration of these factors and after communication with Bartram's Garden and the PADEP, Arcadis will use ~~one of~~ the following location~~s~~ for public meetings:

- Richard Allen Preparatory Charter School
  - Address: 2601 South 58th Street. Philadelphia, PA 19143
  - Phone: 215.878.1544
  - ~~Groups of 50 or less may use the outdoor pavilion on a first come, first serve basis. The indoor room with more capacity requires up to three months' notice.~~
  - ~~This is the same location that is proposed for the hard copy Information Repository, if available, described in Section 2.3.~~
- ~~Walnut Street West Library:~~
  - ~~Address: 201 South 40th Street, Philadelphia, PA 19104~~
  - ~~Located 1.6 miles from the Site~~
  - ~~Phone: 215.685.7671~~
  - ~~Website: https://www.freelibrary.org/locations/walnut-street-west-library~~
  - ~~The library meeting room has a 100-person capacity. This is the backup location proposed for the hard copy Information Repository, described in Section 2.3.~~

Public notice of the meeting will provide details of the meeting location. ~~Based on communications with Bartram's Garden representatives, public meetings will be~~. An online ~~meeting~~ platform will also be utilized to retain documents, and to stream the meetings, if possible. The online repository has been established and is accessible at https://www.alliance51ststreet.com.

Comments provided by the public in writing and orally at the public meeting will be summarized and a responsiveness document will be prepared responding to each comment or groups of similar comments, and published in the Information Repository.

2.2 Site Mailing List

To facilitate communication, public involvement, and dissemination of information, Arcadis will maintain a site mailing list to distribute notices and other site-related information, as appropriate. The mailing list will include, but is not limited to, the following: owner(s) of the site; local officials; state officials; individuals who attend public meetings; people who make inquiries to Arcadis, Alliance, or the PADEP; community groups; and the information repository and newspaper. Interested individuals can be added to or removed from the mailing list by providing contact information on sign-in sheets at public meetings or by contacting the Arcadis project manager listed below. To protect the privacy of individuals, information provided to Arcadis for the site mailing list will not be used for any other purpose.

The current Site mailing list is provided in Table 1, below. Mailing list recipients will be notified of upcoming public meetings and report submissions.

Table 1 Site Mailing List

2.3 Information Repository

Notifications of reports that are going to be submitted to the PADEP will be posted in the Philadelphia Inquirer for one day. Upon these notifications, a public comment period of 30 days will be provided for review of reports. The notification will contain the deadline for receipt of comments and the name and address to submit comments. The public comment period will be conducted prior to submittal of each report to PADEP. Copies of the comments received will be provided in the report along with how each comment was addressed. Information on the availability of each report for review and comment will be distributed to the mailing list. Reasonable proof of publication of the notice of public comment period will be provided in the report. A summary of the report will be provided in plain language to facilitate public review.

To provide a central, publicly accessible location for individuals to access site-related documents, a local information repository for hard copies of reports will be established at Bartram's Garden:

- Bartram's Garden
  - Address: 5400 Lindbergh Blvd, Philadelphia, PA 19143
  - Located: Less than 0.5 miles from Site
  - ~~o~~ Phone: 215.729.5281
  - ~~o~~ Website: https://www.bartramsgarden.org.

~~or at the Walnut Street West Library, as discussed in Section 2.1.~~ Additionally, all documents located in the information repository will be electronically shared, via email, to LeighAnne.Rainford@phila.gov. The entities listed in Table 1 of Section 2.2 will be notified of documents uploaded as well.

An online document repository has been established and is accessible at https:/www.alliance51ststreet.com. ~~.~~ The document repository will include summaries of key documents translated into common languages. The location of the repository will be indicated in the public notices.

Contacts

To keep the public and others who may be interested in the implementation activities at the site informed and involved, Arcadis developed this PIP and will be responsible for implementing the various activities of the public involvement program. Mr. Lawrence Brunt serves as Arcadis' contact person for questions from the community. Lawrence's contact information is provided below:

Lawrence Brunt
Arcadis U.S., Inc

51st Street Act 2 Schedule

- Quarterly Groundwater Monitoring (2 Quarterly Events for Site Characterization and 4 Events for Attainment)
    - 1st Quarterly Groundwater Event for Chromium completed
    - 2nd Quarterly Groundwater Event for Chromium completed
    - Week of February 24, 2025 – 3rd Quarterly Groundwater Event for Chromium
    - Week of May 26, 2025 – 4th Quarterly Groundwater Event for Chromium
- Soil Investigation
    - December 2024 – Perform Additional Soil Sampling
- Public Involvement Plan
    - December 4th – Submit PIP to PADEP and the City of Philadelphia
    - Public meeting pursuant to the PIP promptly after close of the public comment period for the Remedial Investigation Report (RIR)~~RIR~~
- Site Characterization Report/Remedial Investigation Report/Cleanup Plan
    - December 2024 – January 2025 - Prepare Report
    - January 2025 – Perform Groundwater Modeling
    - February 14, 2025 –Submit to PADEP
    - March 19, 2025 – Submit Revised PIP to PADEP
    - March 2025 – Submit revised RIR/Cleanup Plan, notify public of new meeting
    - April / May 2025 – Submit Human Health Risk Assessment
    - April / May 2025 - Public Meeting
    - ~~February 14, 2025 - Publish thirty-day public notice and comment period in local newspaper~~
    - Within 45 days after public meeting - submit response to comments to PADEP and report addendum, as necessary
- Remedial Investigation Report/Cleanup Plan Addendum
    - Summarize the results from the two additional groundwater monitoring events performed in February and May 2025
    - June 2025 – Prepare Addendum
    - July 15, 2025 – Submit to PADEP
    - July 15, 2025 – Publish thirty-day public notice and comment period in local newspaper
    - Within 45 days of close of public comment period - submit response to comments, if any, and report addendum, if necessary.
- Site Redevelopment
    - October/November 2024 -Perform geophysical site testing for building construction
    - Start of building construction – to be determined based upon market/financial conditions.
- Final Report Preparation and Submission - Within sixty days of completion of Site Development with public notice and response to comments and revised report as appropriate

- Establish Environmental Covenants - Within thirty days after PADEP approval issued for Final Report

Hi Crystal,

Based on the information provided in the document, it appears that the responses and proposed approaches should be adequate to resolve the report deficiencies. However, at this time we are only commenting on the proposed responses to the deficiencies. It is our understanding that this document is not the 60-day resubmission of the report. The revised report with the information to resolve the deficiencies still needs to be submitted within the 60-days from the date of deficiency letter. Once the full resubmission is received, it will be reviewed and a decision on the responses will be made at that time.

Matt

To: Flannery, Rebecca
Subject: RE: 51st Alliance

Rebecca
We were onsite last Monday, April 29th, and collected samples for laboratory analysis for VOCs and SVOCs. We are expecting to receive the results by Monday May 13th. While onsite, we inspected the area and the water with the yellow color is located along the southern portion of the tank containment area for former tanks 7551 and 7550 and the ditch next to the containment area. The water in the northern portion of the tank containment area has no color. We will let you know as soon as we receive the sampling results.
Any questions, let us know.
Thanks,
Larry

Larry,
I received another field narrative from Paul Jardel of our Clean Water Program. Can you let me know if/when someone from Arcadis will be going out to investigate the colored water in the containment dike that held the ASTs?

Thank you,

Attachments: Table 1 SW VOCSVOC Results.pdf; Table 2 SW Dye Results.pdf; Table 4 202401 GW Cr.pdf; Table 5 New 202405 GW Cr.pdf; Table 6 Soil Cr.pdf; Table 7 Soil splp.pdf; Table3 SW Cr Results.pdf; 2024-5-29_Proposed Temporary Well Locations.pdf

Rebecca,
As we discussed Thursday, Alliance has been actively investigating the source of the discolored (yellow-green) water discovered in the surface water at the site by the Philadelphia Water Authority. The initial step was to construct soil berms across the low lying area on the eastern portion of the site to prevent any discolored water from leaving the site. This has been effective, and no discolored water has flowed off the site. The next step was to identify the type of contaminant and potential source creating the colored water. The information provided by the Philadelphia Water Department (PWD) threw us off track for a while looking for sources of synthetic dyes. As you will recall, the PWD would not provide us with their laboratory data, only a description that the water contained a synthetic dye.

Based upon the information from the PWD, we collected some samples of the water on April 29th to evaluate the potential contaminants and submitted the samples to laboratories for analysis for VOCs, SVOCs and dyes (fluorescein, eosine and rhodamine WT (RWT), sulforhodamine B (SRB) and pyranine dyes). No dyes were detected in the sample. No VOCs other than a low level of acetone were detected in the sample. Similarly, only estimated concentrations below laboratory reporting limits of bis(2-ethylhexyl)phthalate, benzo(b)fluoranthene, and benzo(k)fluoranthene were detected in the SVOC analyses. We also performed some field screening tests using field test strips. During these tests, we identified the presence of chromate. We then submitted a sample of the water (unfiltered) to a laboratory and confirmed that chromium was present in the water. The laboratory sampling results are summarized in Tables 1 - 3.

After determining the type of contaminant, we performed a thorough review of all soil boring logs from the site and identified several locations where stained soil with yellow-green color was observed. The locations appeared to be limited to the soil around former tanks TK-7550 and TK-7551 which were previously used for storage of gasoline and Fuel Oil No. 2 . We also determined that monitoring wells MW-3, MW-4 and MW-7 had a yellowish tint in the water when sampled. We requested the lab to research the analyses completed for lead in January to determine if data could be obtained from the monitoring wells for total chromium. The laboratory method for metals was ICP so the lab went back to review all prior ICP results from the January 2024 sampling event and was able to provide data for all wells except MW-3, MW-4 and MW-7 due to QA/QC issues (see attached results). Chromium was present in wells MW-1, MW-2, MW-5 and MW-8 at concentrations below the non-residential used aquifer MSCs. In MW-9, chromium was detected at a concentration greater than the non-residential used aquifer MSC but below the non-residential non-use aquifer MSC. The results are summarized in Table 4.

After receiving this data, we mobilized to the site on May 30th and collected groundwater samples from wells MW-3, MW-4, MW-7 and MW-9 for analysis for total chromium and hexavalent chromium. The results were received earlier this week and identified the presence of chromium (trivalent and hexavalent) in the groundwater. The concentrations of total chromium were below the non-residential non-use aquifer MSCs but were above the non-residential used aquifer MSCs. The results are summarized in Table 5.

We also performed test pits at three previous boring locations (SB-206, SB-209 and SB-216) where stained soil was identified. The test pits identified the presence of a distinctive layer of discolored soil (yellow-green staining) which started at approximately 3.5 to 5 feet below grade which corresponded to approximately 0-6 inches above the current water table. The stain soil is very distinctive in color and is not present in the first several feet of the soil

column. Further, chromium is not related to any prior uses of the property. As such, the stained soil layer appeared to have been related to historic filling of the area. This is being further evaluated as discussed below. Samples were collected from the stained soil. The analysis of the stained soil confirmed the presence of trivalent and hexavalent chromium. The concentrations of trivalent and hexavalent chromium in the stained soil from SB-206, SB-209 and SB-216 as well as the soil collected from SB-501 and SB-502 were below the non-residential direct contact MSCs and non-residential used aquifer soil to groundwater MSCs. In SB-503 and SB-504, hexavalent chromium was not detected, and trivalent chromium was identified at 230 mg/kg and 987 mg/kg, respectively. The results are summarized in Table 6. SPLP analysis also was performed on the samples from SB-206, SB-209 and SB-216 for hexavalent chromium. The concentrations ranged from 14.4 mg/L to 58.8 mg/l. The results are summarized in Table 7. A figure illustrating the sample locations also is attached.

Based on these findings, we mobilized to the site this past Friday to collect additional groundwater and soil samples from temporary wells and borings being installed to the west of the tank containment area to fully delineate the area of the color-stained soil and along the western property boundary to determine if the colored soil/groundwater extends that far upgradient such that an offsite source could be impacting the site. We should have those results later this week.

In conjunction with the above, we also are researching historical records to determine if this area of Philadelphia was historically filled with material, since the presence of chromium is not related to the previous petroleum terminal operations or the historic operations, lumber and cardboard manufacturing, performed at the site. You mentioned that you have an associate in your office who is very good at researching historic records. Any assistance from her would be greatly appreciated.

Also, as discussed, the chromium impacts will be addressed with the Act 2 case, and we will update the NIR to reflect that. Based upon all the above data and evaluation and any information your office may be able to provide regarding historic records, we will develop a path forward for the chromium. Except for the chromium, we have completed all field work and were getting ready to submit the Act 2 Remedial Investigation Report and Cleanup Plan to you.

We will keep you informed as we receive further information and results. Any questions, let us know.
Thanks,
Larry

Larry,
I was wondering what type of investigation was performed regarding the green colored water? I just got another call regarding the outcome of it.

Any information would be helpful.

Thank you,
Rebecca Flannery | Geoscientist

---

Rebecca and Matt,

We are following up on the recent e-mails and telephone calls, and are providing the summary below for the Alliance 51st Street site. This may help with the transition of the Act 2 case.

As I mentioned to Matt on Monday, we would like to set up a call with PADEP, which would also include our client and counsel (included on email), to review the updated site investigation information for the recently identified chromium issue and the status of the Act 2 case. We can also discuss the revised NIR for the Act 2 case and how to address that given our findings summarized below. Please let us know some dates and times for the call.

By way of background, attached is the email that I sent to Rebecca on June 10th which describes the ongoing investigation activities into the chromium issue. The presence of chromium is not related to the previous petroleum terminal operations or the historic operations, lumber and cardboard manufacturing, performed at the site. We believe the presence of chromium is a background issue associated with historic filling of the general area. We have been researching historical records and performing additional investigation activities to identify the extent of the filling. As indicated in the June 10th email, we installed and sampled 11 additional soil borings and 7 temporary wells on the western and northern portions of the site on June 7th. We identified stained soil in four of those additional borings (SB-505, SB-506, SB-508 and SB-513) at depths starting at a few feet below grade and extending to 10-15 feet below grade. Borings SB-506 and SB-508 were located on the northern and western property boundaries, respectively, indicating the stained soil beginning at a few feet below grade is offsite as well. Soil samples were collected at 0 to 6 inches above the water table. The sampling results for these borings and temporary wells are summarized in the attached tables. The soil sampling identified hexavalent chromium in only one boring, SB-511, at a concertation greater than the Used Aquifer Non-Residential Soil to Groundwater MSC. Total chromium was detected in two groundwater samples, TW-505 and TW-511, at concentrations greater than the Non-Residential Used Aquifer MSC. The boring and temporary well locations are illustrated on the attached figure.

After reviewing these results and the previous findings, we installed test pits on the southern

property boundary on July 3rd to determine the extent of the historic filling on the southern portion of the site. We installed five test pits (TP-101 to TP-105) along the southern property boundary and identified the stained soil layer in each test pit which was encountered a few feet below grade and varied in thickness in each test pit. At one location, TP-105, the stained soil layer started at approximately 3 feet below grade and extended to the bottom of the test pit at 17 feet below grade. The test pits confirmed that the presence of the chromium is a background issue associated with historic filling activities that were occurring on and off the site. A few photographs of the test pits illustrating the stained soil layer are attached. In addition, a figure illustrating the approximate locations of the test pits is attached. The figure also illustrates the borings and test pits which contained the historic fill layer and stained soil during our recent and previous investigation activities.

During a previous conversation with Rebecca regarding the chromium investigation at the site, we mentioned that we were researching historical records to determine if this area of Philadelphia was historically filled with material. At that time, Rebecca mentioned that there is an associate in your office who is very good at researching historical records. Was she able to identify any records of historic filling in the area?

We were able to find a few historic aerial photographs from 1929 (see attached) that illustrate the low-lying area on site where the stained soil is primarily being identified. The aerial photo also illustrates the sand mining operation on the other site of the railroad tracks. This area was subsequently filled and is now Bartram's Gardens.
We can discuss these findings further on our call. If you have any questions in the meantime, let us know.
Thanks,
Larry

Hi Larry,

I am following up on Rebecca Flannery's email from earlier. As she stated, I am taking over the site for her and would like to get an update on site activities. Additionally, I would also like to discuss the planned timeframe for Act 2 submissions for the site. Let me know what your availability for a call is like next week when you return to the office.

Hi Larry,

The site visit did go well except for the heat. I do not think that there is anything specific that we would need to discuss prior to the call. I was curious if you might be able to share the laboratory reports for the May and June data tables that you shared previously.

Matt

Matt

We wanted to let you know that this Friday we will be collecting surficial soil samples as discussed in our previous conference call. In reviewing current site conditions, it appears that stained soil at the surface is now apparent in areas where the impacted groundwater (with yellow color) puddled after heavy rain events. We are planning on collecting four samples from the areas of staining and four samples from the general former tank containment area where the historic fill layer was identified where we previously obtained samples at depth ~~but~~ where there is no staining on the surface. The results of the samples from the general area can then be used to compare concentrations in the surface soil and the impacts created by the groundwater.
If you have any questions about the sampling, please let us know.

Thanks,
Larry

---

Matt,

I am following up on two items that were discussed in our call on November 20th. The items include the additional delineation of hexavalent chromium in the soil at the Site and the previous sampling of the soil pile on the Site.

As discussed, there is one surficial soil sample location, S-604, which requires delineation. The concentration of hexavalent chromium (5,710 mg/kg) in the sample was greater than the Non-Residential MSC for Surface Soil (0-2 feet), but below the Non-Residential MSC for Subsurface Soil (2-15 feet). Although this sample will eventually be under approximately 10 feet of fill after the redevelopment, PADEP requested that additional delineation should be performed, and samples also should be collected along the 51st Street property boundary as well. Accordingly, the current plans are to collect horizontal delineation samples around S-604 to the north, east and south, and a vertical delineation sample at S-604. In addition, three samples will be collected along the 51st Street property boundary and one sample will be collected along the eastern property boundary. The borings will be installed to the top of the water table and screened for the presence of yellow staining. Sample depth will be biased to any staining. If no staining is present, samples will be collected at the surface and the 6-inch interval above the water table. The proposed sampling locations are illustrated on the attached Figure 1 along with the locations where previous soil samples were collected for hexavalent or total chromium analysis. Please review and let us know if you have any questions or comments on the proposed sampling. We have scheduled the sampling for the week of January 6, 2025.

With regard to the soil pile on Site, the soil pile was sampled in 2021 following PADEP's Management of Fill Policy to determine if the soil could be reused at the Site during redevelopment. Sixteen (16) soil borings and twelve (12) test pits were installed into the approximately 20,000 to 25,000 cubic yard soil pile. The soil borings were installed from the top of the pile to a depth of 15 feet, which corresponded roughly to the average estimated height of the soil pile. The soil borings were installed using direct-push drilling techniques. The test pits were installed into the sides of the pile using a backhoe. The sample locations are illustrated on the attached figure (Figure 2). An excerpt from the Phase II report detailing the sampling methodology is attached (Attachment 1).

The borings were separated into four groups and three samples containing the highest PID readings from the 12 samples collected from each group were submitted for VOC analysis to a certified laboratory. Composite samples were also creating by mixing shallow, intermediate, and deep samples, respectively from each group. The composite samples were submitted under chain of custody protocol to a certified laboratory for analysis for polychlorinated biphenyls (PCBs), semi-volatile organic compounds
(SVOCs), and metals.

VOC concentrations were well below the clean fill concentration limits criteria. With the exception of benzo(a)pyrene, the SVOC concentrations were below the clean fill concentration limits criteria. Benzo(a)pyrene was detected in one sample (Comp-12) at a concentration greater than the clean fill concentration limits but below the regulated fill concentration limits. PCB concentrations also were well below the Arochlor specific clean fill concentration limits criteria. In addition, the total metals concentrations also were below the current clean fill concentration limits criteria. The sample results for the soil borings are summarized in attached Table 3 and the results for the test pits are summarized in attached Table 4.

In reviewing the analytical results for total chromium, the concentrations ranged from 20.6 mg/kg in Comp-5 to 155 mg/kg in Comp-12. If you conservatively assumed that all of the total chromium consisted of hexavalent chromium, which is unlikely, the concentrations would still be below the Non-Residential Soil MSCs.

If you have any questions about the sampling results or proposed sampling, please let us know.
Thanks,
Larry

Attachment 1
Excerpts from 2021 Phase II Report

SOIL INVESTIGATION

Sample Collection

Soil Pile

On October 25, 2021, sixteen (16) soil borings and twelve (12) test pits were installed into an approximately 20,000 to 25,000 cubic yard soil pile located at the Site. The soil borings were installed from the top of the pile to a depth of 15 feet, which corresponded roughly to the average estimated height of the soil pile. The soil borings were installed by Hawk using Geoprobe direct-push drilling techniques. The test pits were installed into the sides of the pile by Hawk using a backhoe. The sample locations are illustrated on Figure 2.

The borings and test pits were installed to characterize the material in the pile for potential reuse onsite or offsite disposal. The borings were broken into four groups, B-1 to B-4, B-5 to B-8, B-9 to B-12 and B-13 to B-16. Twelve discrete samples were collected from each group, 3 samples per boring. Each boring was separated into three different intervals (0-5 ft, 5-10 ft, and 10-15 ft) based on the Geoprobe macrocores and a discrete 6-inch sample was collected from each interval based on PID readings and visual observations. Three samples containing the highest PID readings from the 12 samples collected from each group were submitted for VOC analysis to a Pennsylvania certified laboratory. Composite samples were also creating by mixing shallow, intermediate, and deep samples, respectively from each group. Comp-1 through Comp-3 were collected from boring B-1 through B-4 from the shallow, intermediate, and deep zones, respectively. Comp-4 through Comp-6 were collected from boring B-5 through B-8 from the shallow, intermediate, and deep zones, respectively. Comp-7 through Comp-9 were collected from boring B-9 through B-12 from the shallow, intermediate, and deep zones, respectively. Comp-10 through Comp-12 were collected from boring B-13 through B-16 from the shallow, intermediate, and deep zones, respectively. The composite samples were submitted under chain of custody protocol to a Pennsylvania certified laboratory for analysis for polychlorinated biphenyls (PCBs), semi-volatile organic compounds (SVOCs), and metals.

The 12 test pits were evenly spaced around the sides of the excavation. Hawk under the supervision of Arcadis personnel utilized a backhoe to remove approximately 5 ft of soil at each location. The test pits generally consisted of sands with cobbles and stone throughout. Bricks, concrete, tile, and other debris were also found throughout the test pits, as well as on some surface areas of the pile. Soil samples were collected from each test pit based on PID readings and visual observations. Samples from the 12 test pits exhibiting the three highest PID readings were submitted for VOC analysis at a Pennsylvania certified laboratory. Three composite samples, Comp-13 through Comp-15, were also collected from TP-1 to TP-4, TP-5 to TP-8, and TP-9 to TP-12, respectively. The composite samples were submitted under chain of custody protocol to a Pennsylvania certified laboratory for analysis for PCBs, SVOCs, and metals.

During the sampling, Arcadis personnel screened each boring and test pit for the presence of contamination using a PID and visual/olfactory observations. There were no signs of obvious contamination or odors. The PID readings ranged from non-detect to 19.8 ppm.

After completion of the soil investigation, the boreholes and test pits were backfilled with the drill cuttings. The sampling locations are illustrated on Figure 2 and the boring logs are provided in Appendix A.

Attachment 1
Excerpts from 2021 Phase II Report

Analytical Results

Soil Pile

VOCs were not detected in the samples collected from the test pits (TP-1, TP-5 and TP-11) with the exception of chloroform which was identified at estimated concentrations ranging from 0.00016 mg/kg (TP-11) to 0.00024 mg/kg (TP-1). The concentrations were well below the clean fill concentration limits criteria.

In the soil borings, only low levels of acetone at B-7 (6.5-7), B-9 (7.5-8) and B-12 (4.5-5), ethylbenzene at B-12 (4.5-5), and chloroform at multiple locations were detected. The concentrations were well below the clean fill concentration limits criteria.

Low levels of various SVOCs were detected in the composite samples from the soil borings (Comp-1 to Comp-12) and the test pits (Comp-13 to Comp-15). With the exception of benzo(a)pyrene, the concentrations were below the clean fill concentration limits criteria. Benzo(a)pyrene was detected in Comp-12 at a concentration of 0.86 mg/kg which is above the clean fill concentration limits criteria of 0.58 mg/kg but below the regulated fill concentration limits criteria of 12 mg/kg.

PCBs were not detected in 11 of the 15 composite samples collected. PCBs were detected in samples Comp-4, Comp-5, Comp-6 and Comp-12 at concentrations of an estimated 0.016 mg/kg, an estimated 0.00396 mg/kg, 0.0408 mg/kg, and an estimated 0.0153 mg.kg. The concentrations were well below the Arochlor specific clean fill concentration limits criteria.

With the exception of vanadium, the total metals concentrations were below the clean fill concentration limits criteria. Vanadium was detected consistently in all samples at concentrations ranging from 23.6 mg/kg in Comp-2 and Comp-8 to 36 mg/kg in Comp-13. The concentrations were above the clean fill concentration limits criteria of 15 mg/kg but below the regulated fill concentration limits criteria of 220 mg/kg. Based on the consistent results in all samples, the vanadium concentrations are likely related to background conditions.

The sample results for the soil borings are summarized in Table 3 and the results for the test pits are summarized in Table 4. The laboratory reports are provided in Appendix C.

NOTES:
GC/MS - Gas Chromatography / Mass Spectrometry
J - The compound was detected; however, the concentration is below the laboratory method detection limit. Accordingly, this concentration is estimated.
MSC - Medium Specific Concentration
NS - No PADEP Soil Quality Standard established for this criteria
PADEP - Pennsylvania Department of Environmental Protection
Qual - Qualifier
SHS - Statewide Health Standard
SIM - Selected Ion Monitoring
TDS - Total Dissolved Solids
U - Compound was undetected at the listed laboratory method detection limit.
Concentrations reported in miligrams per kilogram (mg/kg)
Bolded and Highlighted concentrations are exceedances of the corresponding standard
Italicized results are reporting limits that exceed the corresponding standard

NOTES:
GC/MS - Gas Chromatography / Mass Spectrometry
J - The compound was detected; however, the concentration is below the laboratory me
MSC - Medium Specific Concentration
NS - No PADEP Soil Quality Standard established for this criteria
PADEP - Pennsylvania Department of Environmental Protection
Qual - Qualifier
SHS - Statewide Health Standard
SIM - Selected Ion Monitoring
TDS - Total Dissolved Solids
U - Compound was undetected at the listed laboratory method detection limit.
Concentrations reported in miligrams per kilogram (mg/kg)
Bolded and Highlighted concentrations are exceedances of the corresponding standard
Italicized results are reporting limits that exceed the corresponding standard

NOTES:
GC/MS - Gas Chromatography / Mass Spectrometry
J - The compound was detected; however, the concentration is below the laboratory me
MSC - Medium Specific Concentration
NS - No PADEP Soil Quality Standard established for this criteria
PADEP - Pennsylvania Department of Environmental Protection
Qual - Qualifier
SHS - Statewide Health Standard
SIM - Selected Ion Monitoring
TDS - Total Dissolved Solids
U - Compound was undetected at the listed laboratory method detection limit.
Concentrations reported in miligrams per kilogram (mg/kg)
Bolded and Highlighted concentrations are exceedances of the corresponding standard
Italicized results are reporting limits that exceed the corresponding standard

NOTES:
GC/MS - Gas Chromatography / Mass Spectrometry
J - The compound was detected; however, the concentration is below the laboratory method detection limit. Accordingly, this concentration is estimated.
MSC - Medium Specific Concentration
NS - No PADEP Soil Quality Standard established for this criteria
PADEP - Pennsylvania Department of Environmental Protection
Qual - Qualifier
SHS - Statewide Health Standard
SIM - Selected Ion Monitoring
TDS - Total Dissolved Solids
U - Compound was undetected at the listed laboratory method detection limit.
Concentrations reported in miligrams per kilogram (mg/kg)
Bolded and Highlighted concentrations are exceedances of the corresponding standard
Italicized results are reporting limits that exceed the corresponding standard

Good morning Anthony,

I hope you are doing well – happy new year to you too. DEP has reviewed the information you provided and your proposal for the HHRA for the trail area. DEP agrees that some of the chromium VI contamination may be pre-existing and some may come from other sources, such as the railroad embankment and material eroded/deposited by the river. DEP also agrees that it is unlikely that stormwater has discharged from Alliance's swale since last year.

However, Alliance should use all data in the area of the inferred release downgradient from the property line in the risk assessment. There is uncertainty with partitioning chromium VI contamination in those samples between residual chromium VI from the Alliance property release and possible other sources. Including all data from the area of the inferred release in the HHRA does not mean that the contamination was all caused by Alliance or that Alliance is entirely responsible for it (and that can be explained in the report). Doing so will be conservative and would demonstrate that the result of Alliance's remediation is protective of public health.

Based on your figures and DEP's knowledge of the site, we consider the following sample locations to be within the area that stormwater flowed off of the Alliance property and onto the trail and riverbank: S3, S5, S6, S7, S8, and S16. The most recent data from those points should be used to determine the exposure point concentration in the HHRA.

Please let us know if you would like to discuss this further.

Thank you,

Andrea

Subject: RE: [External] RE: Confirmed: DEP / Alliance 51st call

Dave:

A belated Happy New Year to you and the PADEP team.

Following up on one remaining open item we owe PADEP before the HHRA is prepared. We all agreed that evaluating the source of the offsite hexavalent chromium (offsite vs the 51st property) was appropriate to determine the data Alliance should be including in its HHRA. Our evaluation was based upon the historical USGS maps and aerials, runoff flow patterns, the cleanups performed, the Alliance post cleanup sampling, the most recent PADEP sampling and documents we received on November 13, 2024 and the follow-up virtual meeting we had. The HHRA should be based upon current conditions.

Attached are four documents prepared to illustrate current conditions and the historical sources of the existing hexavalent chromium concentrations. Starting with the topographic elevation map, this is intended to show the source of the runoff that contributes to the drainage swale on the Alliance property. As illustrated in this figure, all the runoff from the Alliance side of the railroad tracks flows to the Alliance property and the drainage swale along the property line. Both the Alliance and PADEP sampling indicates there are sources of hexavalent chromium in the fill at locations unrelated to the Alliance property. One of the Alliance sample points, S-22 with a 3.9 mg/kg hexavalent chromium concentration, is shown in the figure and was located near the top of the slope on the Alliance side of the tracks. It is likely there is sporadic hexavalent chromium in the entire bank. The trail area general flow illustrates the runoff pattern along the trail. As we have previously explained, we reviewed the history of the Alliance site and surrounding area for areas that are reclaimed land likely filled in the early part of the 1900s. Attached is a summary of areas of potential filling prepared by Arcadis. We also note that the elevated rail line along the south east property line dates back to the late 1800s. A USGS map in the Arcadis document shows the rail line in 1891 off the south property line and going across the river. The rail line very likely has the same fill material along its embankment as in the Alliance property. Also, both Alliance and PADEP sampling found hexavalent chromium at S-21 which is unrelated to the Alliance property and the Alliance sampling. The attached sciver sand aerial is referenced in the attached summary.

As we discussed during our virtual meeting, the latest PADEP sample results along the river are likely the result of deposition of river sediments from the high tide and flooding from the river. The PADEP sampling was after the Alliance cleanup and its sampling and within a very dry period with little to no rainwater runoff which supports the river sediments as the source. It is also important to note, since Alliance made all the improvements to the swale on its property, we are not aware of any runoff leaving the property. Weekly inspections are conducted after rain events and sometimes during a rain event. By way of example, an Alliance representative was at the property in the afternoon of December 11, 2024 when there was heavy rain and no water was observed flowing in the swale and leaving the property.

After taking all of this information into account, we question whether Alliance should be responsible for any of the existing hexavalent chromium contamination. That said, Alliance is willing to prepare the HHRA based upon the existing data for S-3 and S-16A but not as an admission of responsibility for the hexavalent chromium currently at those locations. Alliance is prepared to proceed with the HHRA on this basis unless PADEP has any questions/comments. .

Thanks and regards, Anthony

Subject: RE: [External] RE: Confirmed: DEP / Alliance 51st call

Anthony and Eric,

We hope our discussion Wednesday helped clarify the issues you raised.

In another call earlier this week we received some stakeholder feedback on the Alliance site. The stakeholders were concerned with Act 2 remedies being selected before knowing that the site has been adequately characterized. We agree that this is a reasonable concern, and we recommend that you separate the remedial investigation report and cleanup plan milestones on your revised schedule. However, it would be appropriate to present the full scope of the project, including both characterization and proposed remedies, in the public meeting.

In our call Wednesday we reiterated the need to prepare a risk assessment report to attain the site-specific standard for areas of the site that won't have pathway elimination remedies, such as the trail. Please add that report to your schedule. We accepted your proposal to submit a figure/evaluation outlining the impacted area that would be subject to the risk assessment. We will review and respond to that submittal.

We'll provide our comments on the draft PIP separately.

ATTENTION: *This email message is from an external sender. Do not open links or attachments from unknown senders. To report suspicious email, use the Report Phishing button in Outlook.*

Hi Everyone:

Attached is a revised schedule incorporating most of the PADEP comments. We would like to discuss tomorrow the timing of issuing the SCR/RIR/CP vs holding the public meeting. We think there is merit to providing the public a report that summarizing the work performed, soil and groundwater sample results for the Act 2 case and the cleanup plan for the property.

We would also like to discuss the PADEP and Alliance trail sample results and the PADEP request that Alliance prepare a HHRA.

Lastly, attached is the draft PIP for your review. The final version will be submitted to the City of Philadelphia.

Looking forward to our discussion.

Regards, Anthony

USGS Topographic Map Review

The historic USGS maps for the site were reviewed to evaluate the historic filling of the area. Because of the contour interval on the USGS maps, the maps do not show specific filling on the site. However, the presence of the rail line as early as 1891 (see snip it below), which we know is elevated above the surrounding land, indicates that filling occurred in this area along the rail line prior to its construction. Also, in comparing USGS maps from 1894 to 1949 (see snip its below), you can see that wetlands areas to the south of the site have been filled and roadways were installed, indicating that the areas along the river were filled. In addition, historic aerial photos indicate that filling of the site occurred prior to the installation of Tanks #7550 and 7551. Attached is a circa 1920s aerial showing the sand and gravel operation and low lying area along the river on what is now Bartram's Garden. At least parts of Bartram's Garden if not all were filled after the sand and gravel operations ceased. The aerial also shows the southwest area of the site which is low lying and receiving runoff from the foundry to the west. This information together with the presence of the yellow/white fill layer identified in the soil along the southern property boundary of the site indicates that the area was filled in the past.

1 Introduction

On behalf of Alliance 51st Street LLC (Alliance), Arcadis U.S., Inc. (Arcadis) prepared this Public Involvement Plan (PIP) to present a framework for informing and involving the public and other parties that may be interested in remediation plans for the property located at 1646 South 51st Street in Philadelphia, Pennsylvania 19143 (site; Figure 1). This PIP was prepared in accordance with the Pennsylvania Department of Environmental Protection (PADEP) requirements of Title 25, Chapter 250, 25 Pennsylvania Code §§ 250.5 and 250.6, known as Act 2. This PIP will be followed for each Act 2 report submitted to PADEP for the Site. The anticipated schedule of activities is presented in Attachment A.

1.1 Site Location and History

The Site is in Philadelphia County, in the City of Philadelphia. Alliance 51st Street LLC acquired the Site from PBF Logistics Terminals LLC (PBF Logistics) in December 2021. PBF Logistics purchased the Site in 2016 from Plains Products Terminals LLC. Allied Oil Co. Hess Oil & Chemical Corporation operated the Site prior to Plains Products Terminals LLC. The main Site primarily operated as a petroleum product terminal (from approximately 1951 to 2021); historically, the Site also was used for lumber storage (in 1923 prior to development), and as a cardboard container manufacturer (from approximately 1923 to 1945).

According to historical resources, fifteen aboveground storage tanks (ASTs) were constructed at the Site between 1951 and 1975 as part of the operations for Allied Oil Co. (Allied) and later Hess Oil & Chemical Corporation Fuel Oil Terminal (Hess). Locations of the former ASTs are shown on Figure 2. The ASTs, loading racks, and associated piping were removed as part of the AST closure activities and the tank foundations, concrete and soil containment berms, and miscellaneous buildings have been removed as part of the redevelopment activities.

The northwestern portion of the Site previously contained three buildings and a canopy area, which have been demolished. The areas around the buildings are paved with asphalt. The remainder of the Site is mostly covered with gravel, although some areas in the vicinity of former buildings are paved.

A large soil pile (estimated at ~25,000 cubic yards and 20 feet high) was located on the eastern portion of the Site. While the origin of the soil could not be confirmed, the presence of the stockpile appears to coincide with the installation of the ASTs on the Site. The soil was likely excavated from the southwestern portion of the Site during the construction of the ASTs. During the recent redevelopment activities, some of the soil has been spread across the property as part of the grading of site.

Organic compounds and lead are present in site media, primarily associated with the former use of the property as a fuel oil terminal. Soil borings in the former AST and piping area identified exceedances of Pennsylvania Department of Environmental Protection (PADEP) soil Medium Specific Concentrations (MSCs) for volatile organic compounds, semivolatile organic componds, and lead. Groundwater samples from permanent monitoring wells have exceedances of groundwater MSCs for benzene and lead associated with the former terminal operations. Hexavalent chromium also is present in soil and groundwater due to the historic placement of fill onsite in the early 1900s.

The site has recently undergone environmental investigations. An Act 2 Notice of Intent to Remediate (NIR) was submitted to the PADEP in February 2022 and proposed attainment of PADEP statewide health standards (SHS). In April 2024, the Philadelphia Water Department responded to a report of yellow-colored water leaving the Site, near the Bartram's Garden Mile Trail. Upon further investigation it was determined that the water contained chromium and hexavalent chromium. From a review of historical materials, the presence of chromium onsite is due to the historical placement of fill across the Site in the early 1900s. However, as determined by sampling by

Alliance and PADEP, chromium and hexavalent chromium are also present offsite at locations not impacted by the Site. Alliance has taken measures to eliminate any chromium originating from the Site.

A revised NIR was submitted in July 2024 proposing attainment of a combination of SHS and site-specific standards (SSS); which will be demonstrated following further investigation. The future intended use of the site is non-residential. Deed restrictions will be put into place that will memorialize site use restrictions.

1.2 Purpose

The goal of this PIP is to facilitate communication and interaction among Alliance, Arcadis, the local community, PADEP, and other interested parties and organizations regarding the status of the remedial investigation and site closure activities. To accomplish this goal, Arcadis has organized several public involvement opportunities, including:

- Public meetings, as needed, near the site
- Maintenance of a site mailing list
- Establishment of an online information repository for public access of documents
- Designation of a contact person for community questions

These activities are described further in Section 3.

2 Public Involvement Activities

This section discusses the public involvement opportunities established to inform the public about remedial investigation and closure activities at the site. Act 2 reports will be submitted to the interested parties at the same time as submitted the PADEP, to allow for the 30-day public comment period. Following the public comment period, a response to comments, if any, and an amended report, as necessary, will be submitted to the PADEP no later than four weeks (28 days) prior to the end of the 90-day regulatory review period.

2.1 Public Meeting

A public meeting will be held promptly after the 30-day public period for the first Act 2 report (the Remedial Investigation Report and Cleanup Plan) is submitted to the PADEP. Following the public meeting, a response to comments and an amended report, as necessary, will be submitted to the PADEP no later than 45 days after the date of the public meeting.

The objective of a public meeting or hearing will be to discuss activities planned or proposed for the Site, and to gather feedback from the community, local leaders, and other interested parties. A public meeting will be organized by Alliance and/or Arcadis in response to the request by the City of Philadelphia.

The public meeting will be scheduled for a weeknight evening to maximize the potential for interested parties to attend. The meeting will be designed to be informal and interactive so that attendees can hear key findings from project reports and discuss issues during a question-and-answer period. Most of the meeting time will be devoted to discussion of project status and issues, which will help interested parties remain informed and involved in project activities, and track progress toward the achievement of overall project goals. Based on the request from the City of Philadelphia, the following topics will be discussed in the meeting:

- Location and concentration of contaminants identified at the Site;
- Potential health effects of the contaminants based on the concentrations;
- Measures that will be implemented to protect the community;
- Remedial measures that will be implemented to address the contaminants; and
- Procedures to be implemented during redevelopment to minimize dust and control erosion.

Public notice of the meeting will be given at least 30 days prior to the meeting by placing a notice in the local newspaper (the Philadelphia Inquirer). Notice of the public meeting will also be made directly to local civic associations (e.g., the township historical commission) and state and municipal representatives, in addition to the newspaper advertisement. Act 2 documents will be made available to the public at least 30 days prior to the meeting, and the newspaper advertisement will provide details on the location of the information repository.

To facilitate the notification process, an attendance sign-in log will be made available during public meeting to gather names and contact information for those who wish to be added to the site mailing list for use in future notifications.

Multiple locations including the Bartram's Garden facility were evaluated for the public meeting considering users of the trail, accessibility, logistics, and accommodations. In consideration of these factors and after communication with Bartram's Garden and the PADEP, Arcadis will use the following location for public meetings:

- Richard Allen Preparatory Charter School
    - Address: 2601 South 58th Street, Philadelphia, PA 19143
    - Phone: 215.878.1544

Public notice of the meeting will provide details of the meeting location. An online platform will also be utilized to retain documents, and to stream the meetings, if possible. The online repository has been established and is accessible at https://www.alliance51ststreet.com.

Comments provided by the public in writing and orally at the public meeting will be summarized and a responsiveness document will be prepared responding to each comment or groups of similar comments, and published in the Information Repository.

2.2 Site Mailing List

To facilitate communication, public involvement, and dissemination of information, Arcadis will maintain a site mailing list to distribute notices and other site-related information, as appropriate. The mailing list will include, but is not limited to, the following: owner(s) of the site; local officials; state officials; individuals who attend public meetings; people who make inquiries to Arcadis, Alliance, or the PADEP; community groups; and the information repository and newspaper. Interested individuals can be added to or removed from the mailing list by providing contact information on sign-in sheets at public meetings or by contacting the Arcadis project manager listed below. To protect the privacy of individuals, information provided to Arcadis for the site mailing list will not be used for any other purpose.

The current Site mailing list is provided in Table 1, below. Mailing list recipients will be notified of upcoming public meetings and report submissions.

Table 1 Site Mailing List

Note:
NA = Not available.

2.3 Information Repository

Notifications of reports that are going to be submitted to the PADEP will be posted in the Philadelphia Inquirer for one day. Upon these notifications, a public comment period of 30 days will be provided for review of reports. The notification will contain the deadline for receipt of comments and the name and address to submit comments. The public comment period will be conducted prior to submittal of each report to PADEP. Copies of the comments received will be provided in the report along with how each comment was addressed. Information on the availability of each report for review and comment will be distributed to the mailing list. Reasonable proof of publication of the notice of public comment period will be provided in the report. A summary of the report will be

provided in plain language to facilitate public review. To provide a central, publicly accessible location for individuals to access site-related documents, a local information repository for hard copies of reports will be established at Bartram's Garden:

- Bartram's Garden
  - Address: 5400 Lindbergh Blvd, Philadelphia, PA 19143
  - Located: Less than 0.5 miles from Site

  Phone: 215.729.5281Website: https://www.bartramsgarden.org.

Additionally, all documents located in the information repository will be electronically shared, via email, to LeighAnne.Rainford@phila.gov. The entities listed in Table 1 of Section 2.2 will be notified of documents uploaded as well.

An online document repository has been established and is accessible at https:/www.alliance51ststreet.com. The document repository will include summaries of key documents translated into common languages. The location of the repository will be indicated in the public notices.

Contacts

To keep the public and others who may be interested in the implementation activities at the site informed and involved, Arcadis developed this PIP and will be responsible for implementing the various activities of the public involvement program. Mr. Lawrence Brunt serves as Arcadis' contact person for questions from the community. Lawrence's contact information is provided below:

THIS MEMORANDUM

is an acknowledgement that a bill of lading has been issued and is not the Original Bill of Lading, not a copy or duplicate, covering the property named herein, and is intended solely for filing or record.

Shipper's No. _____

Carrier Miller Environmental Group SCAC _____ Carrier's No. NJ06210349-1

RECEIVED, subject to individually determined rates or contracts that have been agreed upon in writing between the carrier and shipper, if applicable, otherwise to the rates, classifications and rules that have been established by the carrier and are available to the shipper, on request; and all applicable state and federal regulations;

at 105 Richwood Ave Deptford NJ 08096, date 10 Aug 21 from _____

the Property described below, in apparent good order, except as noted (contents and condition of contents of packages unknown), marked, consigned, and destined as indicated below which said company (the word company being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to delivery at said destination, if on its route, or otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said Property over all or any portion of said route to destination and as to each party at any time interested in all or any of said Property that every service to be performed hereunder shall be subject to all the conditions not prohibited by law, whether printed or written, herein contained, including the conditions on the back hereof, which are hereby agreed to by the shipper and accepted for himself and his assigns.

Have a Question? Ask The Expert

Visit us at:
www.eurofinsus.com/Env

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
FH	MS and/or MSD recovery above control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
F2	MS/MSD RPD exceeds control limits
F3	Duplicate RPD exceeds the control limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-50281-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-50281-1

Receipt
The samples were received on 8/6/2021 3:23 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.6°C and 1.9°C

Receipt Exceptions
The following sample was submitted for analysis; however, it was not listed on the Chain-of-Custody (COC):

Entered based on other samples and received containers.

Pipe 77 (2) (410-50281-7)

The following samples were listed on the Chain of Custody (COC); however, no samples were received:

Pipe 60 (2)

DUP-3 (410-50281-1), 7551-P5 (3) (410-50281-2), Pipe 75 (2) (410-50281-3), 7551-P1 (3) (410-50281-4), Pipe 87 (2) (410-50281-5), 7551-P2 (3) (410-50281-6), Pipe 77 (2) (410-50281-7), Pipe 76 (2) (410-50281-8), 7551-P3 (3) (410-50281-9), Trip Blank (410-50281-10), Pipe 53 (2) (410-50281-11), 1044-P4 (3) (410-50281-12), Pipe 55 (2) (410-50281-13), Pipe 78 (2) (410-50281-14), Pipe 79 (2) (410-50281-15), 7551-P7 (3) (410-50281-16), Pipe 82 (2) (410-50281-17), 7551-P6 (3) (410-50281-18), Pipe 81 (2) (410-50281-19), Pipe 83 (2) (410-50281-20), Pipe 80 (2) (410-50281-21), Pipe 50 (2) (410-50281-22), Pipe 49 (2) (410-50281-23), Pipe 45 (2) (410-50281-24), Pipe 47 (2) (410-50281-25), Pipe 46 (2) (410-50281-26), Pipe 48 (2) (410-50281-27), 1043-P5 (3) (410-50281-28), 1043-P4 (3) (410-50281-29), 1043-P1 (3) (410-50281-30), Pipe 51 (2) (410-50281-31) and Pipe 52 (2) (410-50281-32).

GC/MS VOA
Method 8260C: The following samples were diluted due to the abundance of non-target analytes: Pipe 75 (2) (410-50281-3), Pipe 87 (2) (410-50281-5), Pipe 55 (2) (410-50281-13), 7551-P7 (3) (410-50281-16), Pipe 45 (2) (410-50281-24), Pipe 47 (2) (410-50281-25) and Pipe 46 (2) (410-50281-26). Elevated reporting limits (RLs) are provided.

Method 8260C: Internal standard (ISTD) response for the following sample was outside control limits: Pipe 53 (2) (410-50281-11). The sample(s) was re-analyzed and ISTD response was outside control limits.

Method 8260C: Internal standard (ISTD) response for the following sample was outside control limits: Pipe 51 (2) (410-50281-31). The sample(s) was re-extracted and/or re-analyzed and ISTD response was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

This Detection Summary does not include radiochemical test results.

Detection Summary

Client: Stantec Consulting Corp.
Project/Site: PBF Logistics

Job ID: 410-50281-1

Client Sample ID: Pipe 51 (2) — Lab Sample ID: 410-50281-31

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Benzene	1.5	J	9.7	0.97	ug/Kg	1	☼	8260C	Total/NA
Anthracene	80	J	100	21	ug/Kg	1	☼	8270D	Total/NA
Benzo[g,h,i]perylene	710		100	21	ug/Kg	1	☼	8270D	Total/NA
Phenanthrene	270		100	25	ug/Kg	1	☼	8270D	Total/NA
Pyrene	100		100	21	ug/Kg	1	☼	8270D	Total/NA
Lead	460		1.6	0.64	mg/Kg	1	☼	6010C	Total/NA

Client Sample ID: Pipe 52 (2) — Lab Sample ID: 410-50281-32

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Anthracene	18	J	23	4.6	ug/Kg	1	☼	8270D	Total/NA
Benzo[a]anthracene	28		23	4.6	ug/Kg	1	☼	8270D	Total/NA
Benzo[b]fluoranthene	34		23	4.6	ug/Kg	1	☼	8270D	Total/NA
Chrysene	40		23	4.6	ug/Kg	1	☼	8270D	Total/NA
Phenanthrene	64		23	5.5	ug/Kg	1	☼	8270D	Total/NA
Pyrene	39		23	4.6	ug/Kg	1	☼	8270D	Total/NA
Lead	110		1.4	0.57	mg/Kg	1	☼	6010C	Total/NA

This Detection Summary does not include radiochemical test results.

Accreditation/Certification Summary

Client: Stantec Consulting Corp.
Project/Site: PBF Logistics

Job ID: 410-50281-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Pennsylvania	NELAP	36-00037	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture

Method Summary

Client: Stantec Consulting Corp.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	N/A

Have a Question? Ask The Expert

Visit us at: www.eurofinsus.com/Env

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F2	MS/MSD RPD exceeds control limits
FL	MS and/or MSD recovery below control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

Metals

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
F3	Duplicate RPD exceeds the control limit
FL	MS and/or MSD recovery below control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TNTC	Too Numerous To Count

Job ID: 410-50151-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-50151-1

Receipt
The samples were received on 8/5/2021 4:02 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.9°C and 2.7°C

Receipt Exceptions
The following samples were submitted for analysis; however, it was not listed on the Chain-of-Custody (COC): Pipe 60 (2) (410-50151-31) and Trip Blank (410-50151-32)

GC/MS VOA
Method 8260C: The following samples were diluted due to the abundance of non-target analytes: 1248-P5 (3) (410-50151-11), Pipe 5 (2) (410-50151-21) and Pipe 17 (2) (410-50151-29). Elevated reporting limits (RLs) are provided.

Method 8260C: Internal standard (ISTD) response for the following sample was outside of acceptance limits: Pipe 2 (2) (410-50151-19). The sample(s) was not re-analyzed due to insufficient volume.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

This Detection Summary does not include radiochemical test results.

Detection Summary

Client: Stantec Consulting Corp.
Project/Site: PBF Logistics

Job ID: 410-50151-1

Client Sample ID: Trip Blank **Lab Sample ID: 410-50151-32**

No Detections.

This Detection Summary does not include radiochemical test results.

Eurofins Lancaster Laboratories Env, LLC

Client Sample ID: 4847-P6 (3)

Date Collected: 08/05/21 09:10
Date Received: 08/05/21 16:02

Lab Sample ID: 410-50151-1

Matrix: Solid
Percent Solids: 73.5

Method: 8260C - Volatile Organic Compounds by GC/MS

Accreditation/Certification Summary

Client: Stantec Consulting Corp.
Project/Site: PBF Logistics

Job ID: 410-50151-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Pennsylvania	NELAP	36-00037	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
FL	MS and/or MSD recovery below control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-50503-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-50503-1

Receipt
The samples were received on 8/9/2021 4:02 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.5°C

GC/MS VOA
Method 8260C: The following samples were diluted due to the abundance of non-target analytes: Pipe 86 (2) (410-50503-3), Pipe 74 (2) (410-50503-4) and Pipe 72 (2) (410-50503-9). Elevated reporting limits (RLs) are provided.

Method 8260C: Elevated reporting limits are provided for the following sample due to insufficient sample provided for analysis: Pipe 85 (2) (410-50503-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F2	MS/MSD RPD exceeds control limits
F3	Duplicate RPD exceeds the control limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-50672-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-50672-1

Receipt
The samples were received on 8/10/2021 4:48 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.6°C and 4.1°C

Receipt Exceptions
The matrix for the following samples did not match the information listed on the Chain-of-Custody (COC): Pipe 67 (2) (410-50672-8), DUP-5 (410-50672-9), Pipe 19 (2) (410-50672-10) and 941-P2 (2) (410-50672-11). The samples matrix is solid, while the COC lists water.

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): 941-P2 (2) (410-50672-11). The container labels list 941-P2 (3), while the COC lists 941-P2 (2).

GC/MS VOA
Method 8260C: The following samples were diluted due to the abundance of non-target analytes: Pipe 69 (2) (410-50672-1) and Pipe 22 (2) (410-50672-19). Elevated reporting limits (RLs) are provided.

Method 8260C: Internal standard (ISTD) response for the following sample was outside control limits: Pipe 58 (2) (410-50672-4). The sample(s) was re-analyzed and ISTD response was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Lead	12		1.8	0.72	mg/Kg	1	☼	6010C	Total/NA

This Detection Summary does not include radiochemical test results.

Detection Summary

Client: Stantec Consulting Corp.
Project/Site: PBF Logistics

Job ID: 410-50672-1

Client Sample ID: Pipe 59 (2) — Lab Sample ID: 410-50672-5

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Anthracene	7.9	J	30	6.0	ug/Kg	1	☼	8270D	Total/NA
Benzo[a]anthracene	7.1	J	30	6.0	ug/Kg	1	☼	8270D	Total/NA
Benzo[a]pyrene	6.1	J	30	6.0	ug/Kg	1	☼	8270D	Total/NA
Benzo[g,h,i]perylene	9.1	J	30	6.0	ug/Kg	1	☼	8270D	Total/NA
Lead	25		2.7	1.1	mg/Kg	1	☼	6010C	Total/NA

Client Sample ID: Pipe 56 (2) — Lab Sample ID: 410-50672-6

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Anthracene	8.1	J	20	4.0	ug/Kg	1	☼	8270D	Total/NA
Benzo[a]anthracene	26		20	4.0	ug/Kg	1	☼	8270D	Total/NA
Benzo[a]pyrene	27		20	4.0	ug/Kg	1	☼	8270D	Total/NA
Benzo[b]fluoranthene	32		20	4.0	ug/Kg	1	☼	8270D	Total/NA
Benzo[g,h,i]perylene	23		20	4.0	ug/Kg	1	☼	8270D	Total/NA
Chrysene	28		20	4.0	ug/Kg	1	☼	8270D	Total/NA
Phenanthrene	29		20	4.8	ug/Kg	1	☼	8270D	Total/NA
Pyrene	40		20	4.0	ug/Kg	1	☼	8270D	Total/NA
Lead	160	F2	1.7	0.69	mg/Kg	1	☼	6010C	Total/NA

Client Sample ID: Pipe 54 (2) — Lab Sample ID: 410-50672-7

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Anthracene	5.2	J	21	4.3	ug/Kg	1	☼	8270D	Total/NA

Accreditation/Certification Summary

Client: Stantec Consulting Corp.
Project/Site: PBF Logistics

Job ID: 410-50672-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Pennsylvania	NELAP	36-00037	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture

Method Summary

Creator: Jeremiah, Cory T

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
^c	CCV Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
FL	MS and/or MSD recovery below control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F2	MS/MSD RPD exceeds control limits
F3	Duplicate RPD exceeds the control limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Stantec Consulting Corp.

Job ID: 410-50879-1

Job ID: 410-50879-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-50879-1

Receipt
The samples were received on 8/11/2021 5:52 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.7°C and 1.4°C

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 410-160689 recovered above the upper control limit for Bromomethane and Carbon disulfide. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260C: The following samples were diluted due to the abundance of non-target analytes: 941-P4 (3) (410-50879-2), Pipe 38 (2) (410-50879-13) and Dup-06 (410-50879-26). Elevated reporting limits (RLs) are provided.

Method 8260C: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: Pipe 34 (2) (410-50879-9). Elevated reporting limits (RLs) are provided.

Method 8260C: The following sample was diluted due to the abundance of non-target analytes: Pipe 40 (2) (410-50879-15). Elevated reporting limits (RLs) are provided.

Method 8260C: Internal standard (ISTD) response for t-Butyl alcohol-d10 for the following sample was outside acceptance criteria: Pipe 39 (2) (410-50879-14). This ISTD does not correspond to any of the requested target compounds; therefore, the data have been reported.

Method 8260C: The continuing calibration verification (CCV) associated with batch 410-160576 recovered outside acceptance criteria, low biased, for 1,2-Dichloroethane, Methyl tertiary butyl ether and Naphthalene. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260C: Internal standard (ISTD) response for the following sample was outside control limits: 2040-P5 (3) (410-50879-19). The sample(s) was re-analyzed and ISTD response was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: Surrogate recovery was outside acceptance limits for the following matrix spike duplicate (MSD) sample: (410-50879-A-1-B MSD). The parent sample's and matrix spike (MS) surrogate recovery was within limits. The MSD sample has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	N/A	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
FL	MS and/or MSD recovery below control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
FL	MS and/or MSD recovery below control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Stantec Consulting Corp.
Project/Site: PBF Logistics

Job ID: 410-51060-1

Job ID: 410-51060-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-51060-1

Receipt
The samples were received on 8/12/2021 5:42 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.1°C

GC/MS VOA
Method 8260C: The following samples were diluted due to the abundance of non-target analytes: Pipe 27 (2) (410-51060-1) and Pipe 30 (2) (410-51060-4). Elevated reporting limits (RLs) are provided.

Method 8260C: The following sample was diluted due to the abundance of non-target analytes: Pipe 44 (2) (410-51060-6). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Methyl tertiary butyl ether	ND		8.3	0.83	ug/Kg	☼	08/13/21 10:27	08/16/21 16:48	1
Benzene	ND		8.3	0.83	ug/Kg	☼	08/13/21 10:27	08/16/21 16:48	1
Naphthalene	ND		8.3	3.3	ug/Kg	☼	08/13/21 10:27	08/16/21 16:48	1

Client Sample ID: 649-P3 (3)

Lab Sample ID: 410-51060-8

Date Collected: 08/12/21 09:30
Matrix: Solid
Date Received: 08/12/21 17:42
Percent Solids: 74.1

Method: 8260C - Volatile Organic Compounds by GC/MS (Continued)

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
