Brief description of the site and summary of observations:

Robert Page (DEP) conducted a Chapter 102 inspection of this industrial redevelopment site (reference previous Chapter 102 inspections between July 18 and December 10, 2024).

No permittee representatives were present; I did not enter the site and took all pictures and observations from 51st Street and the Bartram's Garden trail. Two vehicles and a towable drilling rig (Hawk Drilling) were onsite with 2 to 3 drilling contractors on site.

I noted that the filter sock along both 51st St. gates to the site were in proper position and in good operating condition. Most of the ground was covered with a thin layer of snow and ice during this inspection. The stone stockpile appeared similar in appearance as with recent past inspections.

The erosion gullies first noted on the large fill dirt stockpile (first described in Report No. 10, 10/22/24), remained present. Failure of temporary stabilization to minimize accelerated erosion and sedimentation is a violation of 25 Pa. Code, Section 102.22(b).

COMPLIANCE ASSISTANCE RECOMMENDATIONS

1. Significant erosion gullies remain on the large fill dirt stockpile. To maintain compliance with 25 Pa. Code, Section 102.22(b), addressing and maintaining the temporary stabilization of the large fill dirt stockpile is recommended.
2. In accordance with DEP's Erosion and Sediment Pollution Control Program Manual, Technical Guidance No. 363-2134-008 (March 2012), Page 65, inspect filter socks weekly and after each runoff event. In addition, DEP requests that damaged socks be repaired according to manufacturer's specifications or replaced within 24 hours of inspection.
3. Replacing the black tarp over the small contaminated dirt stockpile and further securing it from blowing off from high winds is recommended.

ADDITIONAL COMMENTS

(continued from Page 1)

The black tarp covering the small pile of contaminated soil downslope of the large fill dirt stockpile was partially blowing off the stockpile. Perimeter control (filter sock) around this pile, and the downslope site perimeter, remained intact.

Sediment staining on the section of the Bartram's Garden trail that was visible (not covered by ice and snow) appeared similar overall as in previous inspections.

One inlet protection filter sock was in place along the wall of the Bartram's Garden trail.

The previously damaged section of perimeter security fence was repaired.

DEP will be continuing to follow up on this site, and Robert Page can be reached at 484.250.5104 or ropage@pa.gov.
