Brief description of the site and summary of observations:

Robert Page and Linda Mackey (both DEP) met with Eric Carlson (Alliance HP) and a representative from Arco Design/Build and from Shearon Environmental Design Co., Inc. for a walkthrough of this industrial redevelopment site's erosion & sedimentation control practices. Bao Nguyen of Philadelphia Water Department was also present for this inspection. Reference previous Chapter 102 inspections between July 18 and November 5, 2024.

DEP observed that mulching generally remained uniform throughout the site.

The erosion gullies first noted on the large fill dirt stockpile (first described in Report No. 10, 10/22/24), remained present. In addition, the rear (southern side) of the large fill dirt stockpile showed significant erosion overtopping the filter sock, as photographed. Failure of temporary stabilization to minimize accelerated erosion and sedimentation is a violation of 25 Pa. Code, Section 102.22(b).

COMPLIANCE ASSISTANCE RECOMMENDATIONS

1. Significant erosion gullies remain on the large fill dirt stockpile. To maintain compliance with 25 Pa. Code, Section 102.22(b), addressing and maintaining the temporary stabilization of the large fill dirt stockpile is recommended.
2. In accordance with DEP's Erosion and Sediment Pollution Control Program Manual, Technical Guidance No. 363-2134-008 (March 2012), Page 65, inspect filter socks weekly and after each runoff event. In addition, DEP requests that damaged socks be repaired according to manufacturer's specifications or replaced within 24 hours of inspection.
3. During this inspection, stormwater management design considerations were discussed. It is recommended to consider design and installation options for a sediment basin at the most downslope portion of the site.

ADDITIONAL COMMENTS

(continued from Page 1)

The black tarp covering the small pile of contaminated soil downslope of the large fill dirt stockpile, remained in place and fully covered this stockpile.

DEP observed the specialized filter sock in the rock-lined swale, which Mr. Carlson stated was designed to absorb 50% of heavy metals (including chromium) from influent stormwater.

Sediment staining on the Bartram's Garden trail remained.

Mr. Carlson stated that weekly visual inspections of the site have been ongoing.

During this inspection, I also observed:

- The stone stockpile was generally unchanged from the previous inspection.
- Some slopes on the large fill dirt stockpile were steeper than 3 units horizontal : 1 unit vertical (3H:1V).
- The vehicle gates at 51st and Botanic Sts. were closed during this inspection.
- Yellowish spots on the soil surface remained at the site, indicative of the presence of chromium.

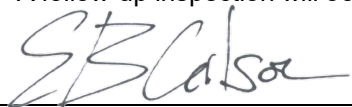

DEP will be continuing to follow up on this site, and Robert Page can be reached at 484.250.5104 or ropage@pa.gov.
