Re: Limited Activity Based Sampling Event 4 Report

Rock Hill Quarry SMP No. 7974SM1 East Rockhill Township Bucks County, Pennsylvania

Dear Mr. Tallman:

Enclosed are the results of Heidelberg Materials Northeast LLC's ("Heidelberg") limited activity based sampling event 4 (500 Ton Removal Event) at the Rock Hill Quarry ("Quarry") on August 22, 2023, performed in accordance with the Pennsylvania Department of Environmental Protection's ("PADEP") June 21, 2023 authorization. The attachments include laboratory analysis of samples collected during the sampling event, meteorological data collected from the Quarry weather station from August 19, 2023 through August 22, 2023, and GPS vehicle tracking data logs for equipment used during the event.

Heidelberg has now completed all of the approved activity-based sampling events at the Quarry. For reference, those events were as follows:

- June 1, 2022 Light Truck Movement,
- October 11, 2022 Equipment Delivery and Site Maintenance,
- April 12, 2023 Stockpile Movement, and
- August 22, 2023 500 Ton Removal Event.

For the 500 Ton Removal Event, the laboratory data indicates that only one (1) non-asbestiform amphibole structure was identified. These results are consistent with the prior activity based sampling events. In total, across fifty-five (55) samples collected and analyzed from the four (4) separate activity based sampling events, only three (3) total amphibole structures have been identified, none of which were determined to be asbestiform structures. Even assuming that the identified structures were determined to be asbestiform, the detections would have resulted in concentrations that are significantly lower than PADEP's action limit of 0.01 fibers/cc.

Heidelberg Materials

Now that it has completed all of the required activity-based sampling exercises, Heidelberg respectfully requests that PADEP lift its December 5, 2018 cessation order and allow Heidelberg to fully resume permitted operations at the Quarry. The results of the air sampling over the last two (2) years demonstrate that operations at the Quarry will not result in an unacceptable risk of exposure to asbestos associated with quarrying activities.

Sincerely,

Andrew J. Gutshall, P.G.

Region Mine Permitting Manager

RE: Air Sample Analyses

RJ Lee Group Project Number: LLH901997

Mr. Schena,

RJ Lee Group (RJLG) has analyzed eighteen (18) samples, including two (2) blank filter cassettes, collected by Compliance Management International on August 22, 2023. The samples were received in good condition via FedEx on August 25 and 30, 2023. The samples were analyzed using ISO method 10312 modified per OSWER Directive #9200.0-68 to include fibers \geq 0.5 μ m long and \geq 3:1 aspect ratio.

Figure 1 shows the location of the sampling sites on a map of the Rock Hill quarry site as well as the wind direction (as recorded by Compliance Management International) during the sampling event.

Of the eighteen samples analyzed, no countable structures (\geq 0.5 μ m long, \geq 3:1 aspect ratio) were detected in seventeen of the samples. A single amphibole structure (Figure 2) was observed during the analysis of sample M3H (3185000) collected at site location M3. The structure is 3.8 μ m long and 0.8 μ m wide (aspect ratio 4.75) and does not have characteristics of asbestiform morphology. The concentration calculated from this analysis is 0.0007 fibers/cc and is 14 times lower than the proposed action limit of 0.01 fibers/cc.

No countable structures were observed on either of the analyzed field blanks.

The laboratory analysis report is attached for reference.

Table 1 provides a listing of the total number of grid openings analyzed and grid opening areas for each analyzed sample.

If you have any questions, please do not hesitate to contact me directly.

Sincerely,

Bryan Bandli, Ph.D.
Principal Investigator

- Volumes provided by the client listed above were used to calculate analytical results and sensitivities.
- "<" indicates results less than analytical sensitivity. "---" indicates that sample was not analyzed.
- If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratory's results are limited to the reported values.
- Abbreviations: N/A-Not Applicable, O/L-Overloaded, Chry-Chrysotile Asbestos, Amph-Amphibole Asbestos, NAS-Non-Asbestos Structures, f-Asbestos Fibers, F-Total Fibers.
- Samples will be held for 90 days and then disposed of per Federal regulations.
- Sample(s) for this project were analyzed at our Pittsburgh, PA (AlHA LAP, LLC #292885, NVLAP #101208-0, NY ELAP #10884) facility.
- These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
- This report relates only to items tested. Reproduction of this document must include all pages in order to be valid.
- "Asbestiform Amphibole" section represents number and concentration of asbestiform amphibole structures included in "Total Structures" count and concentration.

DISCLAIMER

RJ Lee Group, Inc. is accredited by the American Industrial Hygiene Association (AIHA LAP, LLC #292885) and the New York Department of Health Environmental Laboratory Program (NY ELAP) for airborne asbestos analysis. This report may not be used to claim product endorsement by AIHA LAP, LLC, NY ELAP, or any other regulatory or laboratory accrediting agency. Any reproduction of this document must be in full in order for the report to be valid. This report is not valid unless it bears the name of a AIHA LAP, LLC approved signatory.
