Harrisburg, PA 17120-3010

Re: Rock Hill Quarry

Dear Senator Santarsiero:

This is in response to your letter dated June 21, 2019 regarding the historic operation of the Rock Hill Quarry. As stated by Deputy Secretary Stefanko during the meeting of June 14, 2019, held at DEP's Southeast Regional Office, DEP's position is that the Rock Hill Quarry has maintained its status as an active operation since the permit was issued.

Pennsylvania mining regulations define an active operation as one in which a minimum of 500 tons of minerals for commercial purposes have been removed in the preceding year. The 500-ton minimum does not require extraction of minerals from the ground. An operator can satisfy the 500-ton minimum requirement by removing minerals from stockpiles. There is no regulation or requirement that the operator must remove stone at a specific rate. The rate at which stone is removed is often driven by market conditions. Therefore, it is reasonable for an operator to not be on site for periods of time, leaving gates locked and having no personnel on site. This practice also promotes public safety by having a secured site.

The annual Mine Employment and Production Reports alone are not determinative on whether a site is an active operation. DEP relies heavily on the observations and oversight provided by its professional team of inspectors and other technically trained personnel as to the nature of operations at a mining site.

In this case, Mr. Jonas Carpenter, who was employed with DEP for 20 years and was Surface Mining Conservation Inspector for the Rock Hill Quarry for many of those years, evaluated and documented operations at the site multiple times each year. All of his inspection reports specifically indicated that the Rock Hill Quarry remained an active operation, despite periods during which the operator had a diminished presence on the property. These reports also described specific actions occurring on site at various times, such as removal of stone from the stockpiles and the presence of mining equipment on the site, all of which support the conclusion that 500 tons of stone were removed each year. Subsequent inspectors assigned to the site made similar observations and also concluded that the Rock Hill Quarry remained an active operation.

For your convenience, enclosed with this letter please find the 1987 compilation of minerals shipped by The General Crushed Stone Co. that was inadvertently listed under Berks County instead of Bucks County.
