

NARRATIVE REPORT FORM

Facility Name: Glenwood Drive & Walker Road

Primary Facility ID: 881609

Inspection Date: 4/22/26		Inspection Time: 10:18 – 15:30		Lat/Long:	
Program:		<input type="checkbox"/> Storage Tanks	<input type="checkbox"/> HSCA	<input checked="" type="checkbox"/> LRP	
Owner Name: N/A			Inspection ID: N/A		Site ID: 881609
Facility Location (911) Address: Glenwood Drive between Walker and Spencer Road Washington Crossing, PA 18977				Municipality: Upper Makefield Township	
				County: Bucks	
Responsible Official Name: Bradford Fish				Responsible Official Address:	
Title: Senior Environmental Specialist, Emergency Response and Remediation				100 Green Street Marcus Hook, PA 19061	
Responsible Official Telephone: 610.859.6297					
Email Address: bradford.fish@energytransfer.com					

Narrative:

Entities present at the site:

- Energy Transfer, LP
- Groundwater & Environmental Services, Inc
- Stantec – Air monitoring
- Summit Drilling, LLC
- Ansen Construction – Traffic Control
- PADEP – Olivia Budnovitch

The purpose of today's site visit was to observe drilling of monitoring well 18-DD on Glenwood Drive between Walker and Spencer Road (see map).

DEP arrived onsite at 10:18. Upon arrival sound barriers were placed, the drill rig was onsite, and a GES crew was gauging and bailing the potable well at [REDACTED]

Wells B and C were finished the week prior and there was a GES crew pumping well B to measure any fuel that recharged (see photo 1). By the end of the day there was minimal fuel recovery from Well B.

Upon arriving at the drilling site, the Summit crew had just finished hand clearing the location of well 18-DD down to 4.8 feet below ground surface. This monitoring well will be advanced to approximately 150 feet below ground surface.

From 12:00 to 14:00 supplies were set up and the drill rig was positioned (see photo 3). Because of the telescoping design construction of the well, Summit needed to set the temporary casings and place bentonite between the two outer casings to keep them in place during drilling.

Drilling started at 14:05. Soil and rock chips were collected at 5-foot intervals starting at 10 feet below ground surface (see photo 4). Odors were observed intermittently throughout drilling. PID readings ranged from 8.5ppm to 160.8ppm. The highest PID readings were detected at 20 feet below ground surface. Hard bedrock was encountered at approximately 24 feet below ground surface, and a fracture was encountered at approximately 34 feet below ground surface.

Narrative (continued):

The Professional Geologist from GES monitored PID readings closely throughout drilling and made notes of significant features. The water and rock fragment byproduct was loaded into drums and sealed (see photo 2). The drums were also periodically screened with a PID.

During drilling there was a second GES crew gauging the nearby potable wells and tracking liquid levels. Nothing abnormal was reported to DEP.

DEP stayed onsite to observe drilling until they reached 42 feet below ground surface. Before departing, DEP checked in with the GES crew pumping Well-B to see if there were any changes, no new fuel accumulation was reported.

DEP departed from the neighborhood at 15:20.
