**Narrative (continued):**

**Well Drilling Observations:**

- Drilling started at 11:22am and ended at 12:20pm.
- The starting depth was 125-ft bgs and the ending depth was 150-ft bgs.
- All the water from the drilling activities were placed into 55-gallon drums, which were later pumped into a vacuum truck.
- There was a PID set up near the drill rig to continuously monitor the air for vapors. The air from the drill rig was also screened periodically with a different PID.
- Between 138 and 140 ft. bgs, a fracture was encountered.
- Drill cuttings were collected every 5-ft to be able to create a well log.

**Other Observations:**

- Well C was being pumped and recovery well RW-2 was going to be pumped later that day.

I departed at 12:32
