Program: ECB		<input type="checkbox"/> Storage Tanks		<input type="checkbox"/> HSCA	
				<input checked="" type="checkbox"/> LRP	
Owner Name: Energy Transfer			Inspection ID:		Site ID:
Facility Location (911) Address: Glenwood Drive and Walker Road Washington Crossing, PA 18977				Municipality: Upper Makefield Twp.	
				County: Bucks	
Responsible Official Name: Brad Fish				Responsible Official Address:	
Title: Senior Environmental Specialist Emergency Response & Remediation				100 Green Street Marcus Hook, PA 19061	
Responsible Official Telephone: 610-859-6297					
Email Address: bradford.fish@energytransfer.com					
Entities Present: DEP – Rebecca Flannery GES – Mike Haezebrouck, Matt Lyon, and May Morris ET – Chris Embry, Nancy Sadlon, and Elija Contreas Summit Drilling, LLC. Stantec – Monitoring of air and noise Ansen – Sound Control					
Purpose: Observe installation of monitoring well MW-17DD					
Weather: Sunny, mid 60's					
Narrative: I arrived at the site at 8:59am. All the parties listed above were already on site. I spoke with Chris of ET and Matt of GES to see what the planned activities were for the day. <ul style="list-style-type: none"> - The drilling of monitoring well MW-17DD was to be continued, as the drill rig was repaired on the previous Saturday May 2, 2026. - The potable wells at [REDACTED], and [REDACTED] and at [REDACTED] and [REDACTED] were going to be gauged every two hours while the drilling was occurring - Chirs of ET informed me that due to electrical and stormwater drainage on [REDACTED] monitoring wells M.W-15 S and D, the well locations were going to be shifted. Due to the proximity to the pipeline, monitoring well A on [REDACTED] was also going to be shifted. <p><u>Well Activities:</u></p> <ul style="list-style-type: none"> - Well C was planned on being pumped, although there was no measurable LNAPL during the morning gauging event. There was also a PID reading of 8ppm. - At [REDACTED] the LNAPL thickness was measured at 0.07'. A sample of the LNAPL was also collected.

Narrative (continued):

Well MW-17DD Observations:

- Drilling of the well started at 9:45am at a depth of 19'bgs.
- At around 21' below ground surface (bgs), a moderate petroleum odor was detected and had a PID reading of 10.3ppm.
- All the drill cuttings were placed into a 55-gallon steel drum that was labeled, to be disposed of later.
- The drilling and groundwater was pumped into 55-gallon drums. A vacuum truck arrived on site and all the water from the drums were pumped into the truck and then all the drilling and groundwater was put into the vac truck.
- At around 35'bgs, I observed an accumulation of black specs on the water from the borehole.
- The odors were monitored with a PID which was placed next to the drill rig.
- Samples were collected every 5 feet, screened and logged.
- Groundwater was encountered at a depth of 23'bgs.

I did speak with the resident at [REDACTED]. They inquired how much longer the drilling was going to take. I informed them that after they finish the one in the street, there are four more, two on [REDACTED] and two on [REDACTED]. They were most likely in the street for a few more days.

I departed the site at 13:28 after the depth of 60'bgs was encountered.
