Ryan

Shell Chemical Appalachia LLC (“Shell”) is submitting this update to the Pennsylvania Department of Environmental Protection (PADEP), via email, concerning the start-up timeline for Impingement and Entrainment Characterization Study Sampling and Analysis field work. The recent Impingement and Entrainment plan update provided to PADEP on June 11, 2024, along with the Shell Management of Change required to add new valves to the water intake system, has delayed the start-up for the required field work. Shell anticipates the start-up of field activities to begin the week of June 24, 2024, with the exact date to be determined by completion of maintenance valve work at the water intake. An update will be provided with the beginning of field work. Shell anticipates completing one year of sampling to correspond with the 2024-2025 breeding seasons as discussed.

Any questions or concerns please let me know.

Regards,

Jason Schultz | Environmental Engineer, Waste and Water; LDAR Coordinator
