AMENDED FEDERAL FY2026 - PROJECT PRIORITY LIST
UPDATED JULY 20, 2026

APPLICANT NAME: PITTSBURGH WATER & SEWER AUTH. - 2024 AND 2023 A2 SMALL DIA. LSLR PROJECT	REGION: V	DEP PROJECT RATING: 76
STREET ADDRESS: 441 SMITHFIELD ST.	PWSID: 5020038	PROJRANK: 1 of 78
CITY: PITTSBURGH	LOAN # 80309	PROJECT COST: \$7,390,224
COUNTY: ALLEGHENY	FUND SOURCE: DWSRF	PROJECT TYPE: LSL
	MTGDATE: 10/15/2025	
PROJ. DESCRIPTION: Project will includes replacement of approximately 1,607 lead service lines, which includes an estimate 482 private lead service lines, 562 public lead service lines. Some customers will require both public and private side replacement while others will only receive either public or private replacement based upon where the lead pipe component is located.		
PROB. DESCRIPTION: The replacement of lead service lines will improve public health outcomes by reducing the amount of exposure to lead within the service area.

AMENDED FEDERAL FY2026 - PROJECT PRIORITY LIST

UPDATED JULY 20, 2026

APPLICANT NAME:	INDUSTRY BOROUGH MUNICIPAL AUTHORITY- WATER TREATMENT PLANT IMPROVEMENTS	REGION:	VI	DEP PROJECT RATING:	76
STREET ADDRESS:	114 WISHART DRIVE	PWSID:	5040036	PROJRANK:	2 of 78
CITY:	INDUSTRY	LOAN #	85241	PROJECT COST:	\$5,547,000
COUNTY:	BEAVER	FUND SOURCE:	DWSRF	PROJECT TYPE:	TREAT
		MTGDATE:	7/15/2026		

PROJ. DESCRIPTION: This project proposes to construct a new ground water treatment plant. It includes cleaning of existing wells 1 & 2 and replacing two well pumps with new 10 horsepower (hp) pumps. The project also includes site improvements for a new treatment plant building and disinfection upgrades. This includes installing approximately 700 linear feet (LF) of waterline piping, constructing a new 40,000 gallon chlorine contact/oxidation tank with inlet static mixer vault, installing a 6,000 gallon hydraulic break tank to be used as storage tank for the distribution system and constructing a 2,200 square foot new water treatment building. The project also includes installing two (2) 40 hp vertical turbine pumps, a chlorine gas feed system, chlorine analyzers, fencing, driveway, electrical system upgrades, a new 175kW emergency generator with automatic transfer switch, a new SCADA system for effective control and monitoring of water system and all appurtenances associated with equipment installation and building construction.

PROB. DESCRIPTION: Industry Borough Municipal Authority is currently under a Consent Order and Agreement with the Department for exceeding the maximum contaminant level for iron and/or manganese. Also, the current location/layout of the chlorine room does not comply with current Department regulations. The chlorine room is not isolated from other work areas; it is located in a shared building with electrical equipment and the workshop and does not have a separate ventilation system. Additionally, the existing well and treatment system does not have an emergency power source, resulting in unavailability of the water source during power outages. Finally, giardia disinfection contact time for groundwater rule compliance is accomplished using two contact tanks, one of the tanks is a buried steel storage tank that is in poor condition and at the end of its useful life.

AMENDED FEDERAL FY2026 - PROJECT PRIORITY LIST

UPDATED JULY 20, 2026

APPLICANT NAME:	FOXBURG AREA WATER AND SEWER AUTHORITY - WATER SYSTEM IMPROVEMENTS	REGION:	VI	DEP PROJECT RATING:	75
STREET ADDRESS:	C/O NORMA SLAUGENHOUP, SEC.	PWSID:	6160004	PROJRANK:	3 of 78
CITY:	FOXBURG	LOAN #	82260	PROJECT COST:	\$5,176,000
COUNTY:	CLARION	FUND SOURCE:	DWSRF	PROJECT TYPE:	DS, WS, TREAT
		MTGDATE:	4/15/2026		
PROJ. DESCRIPTION:	The project consists of the installation of 6,500 LF of 6-inch diameter waterline, 300 LF of 4-inch diameter waterline, 700 LF of 2-inch diameter waterline, fire hydrants and appurtenances. The water treatment plant work consists of a new water treatment plant, four (4) greensand filters, chemical feed systems and miscellaneous items. The existing water storage tank will be replaced with a 150,000 gallon storage tank.				
PROB. DESCRIPTION:	The Foxburg Area Water & Sewer Authority has chosen to replace the aging waterlines and reduce their water losses. The water treatment plant's existing building is not suitable for rehabilitation due to its construction and deteriorated state. In addition, the existing water treatment plant will not meet the Department's drinking water standards. . The existing water storage tank is also in poor condition and beyond repair. Well No 6's water quality is poor, but the Authority believes it can be modified and retained. The distribution system, consisting of cast iron pipe, has experienced multiple leaks, necessitating the replacement of many lines. In addition, there is only a single waterline that serves both the school and the business district. When leaks happen, these waterlines are shut down, cutting off water service to the key establishments in the service area.

APPLICANT NAME:	MERCERSBURG WATER AUTHORITY – WATER SYSTEM IMPROVEMENTS, PHASE 2	REGION:	III	DEP PROJECT RATING:	73
STREET ADDRESS:	113 SOUTH MAIN ST	PWSID:	7280021	PROJRANK:	5 of 78
CITY:	MERCERBURG	LOAN #	85231	PROJECT COST:	\$3,845,572
COUNTY:	FRANKLIN	FUND SOURCE:	DWSRF	PROJECT TYPE:	TREAT
		MTGDATE:	1/21/2026		
PROJ. DESCRIPTION:	This water system improvement project includes abandoning the existing Buck Run water treatment facility and replacing it with a new greensand filtration facility. The new facility will treat water from the existing Buck Run Well with 50 gallon per minute capacity and the Zimm Well with 100 gallon per minute capacity using pH adjustment, oxidation and pressure filtration to remove iron, disinfection, and orthophosphate addition for corrosion control. The new facility, in conjunction with the Park Avenue well and treatment facility which are under construction, will allow the Authority to remove the Buck Run reservoir from service and continue to supply a reliable quality and quantity of water to its customers.				
PROB. DESCRIPTION:	The Mercersburg Water Authority (Authority) owns the Buck Run filter plant which treats surface water from the Buck Run Reservoir. The existing reservoir and filter plant are in need of major rehabilitation or replacement as evidenced by numerous violations of the Safe Drinking Water Act which were recorded in a Notice of Violation (NOV) dated February 26, 2020. The Authority entered into a Consent Order and Agreement (COA) with the Department on September 10, 2020. This COA required the Authority to prepare an Existing Facilities and Treatment Alternative Study which outlined methods for compliance, the costs of those methods, and the Authority's plan for achieving compliance. The Study concluded that the lowest cost, feasible compliance alternative was the development of a new groundwater source and the construction of two new water treatment facilities, the Park Avenue water treatment facility and the Buck Run water treatment facility. This alternative will allow the Authority to abandon the Buck Run Reservoir and existing filter plant.

APPLICANT NAME:	PITTSBURGH WATER & SEWER AUTHORITY 2026B LSLR	REGION:	V	DEP PROJECT RATING:	70
STREET ADDRESS:	441 SMITHFIELD ST.	PWSID:	5020038	PROJRANK:	8 of 78
CITY:	PITTSBURGH	LOAN #	80330	PROJECT COST:	\$33,500,000
COUNTY:	ALLEGHENY	FUND SOURCE:	DWSRF	PROJECT TYPE:	LSL
		MTGDATE:	7/15/2026		
PROJ. DESCRIPTION:	Based on PWSA's prioritization model run and following the previous Neighborhood LSLR Program 2023A, 2023B, 2024A, 2024B, 2025A, 2025B, and 2026A, PWSA estimates that this project 2026B will replace around about 3,274 lead service lines. The Service Area of this project are Allentown, Brighton Heights, Duquesne Heights, Elliot, Garfield, Greenfield, Manchester, Mount Washington, North Oakland, Point Breeze, Regent Square, Shadyside, Southside Flats, Squirrel Hill North, Swisshelm Park and a one-off 26B work order area.				
PROB. DESCRIPTION:	PWSA started efforts to replace public lead service lines in 2017 and included private lead service lines starting in early 2018. While great strides have been made in both corrosion control treatment (CCT) and Lead Service Line Replacement (LSLR), much work remains. As critical as CCT is to water quality, the issue of lead in drinking water will not be resolved until all lead service lines are removed from the system. PWSA's goal is to remove all lead service lines by 2026 - given the latest budget projections this has been extended to the end of 2027.

CITY: PITTSBURGH	LOAN # 80329	PROJECT COST: \$8,900,000
COUNTY: ALLEGHENY	FUND SOURCE: DWSRF	PROJECT TYPE: LSL
	MTGDATE: 7/15/2026	
PROJ. DESCRIPTION: The replacement of approximately 575 lead service lines is proposed. The lead service line replacement (LSLR) work is planned to be conducted via direct replacement. The anticipated process includes excavating a small pit at the existing water main generally within the paved roadway and an additional small pit at the curb box generally near the roadway curb line. From those pits, a new water service line would be installed between the water main and the home.		
PROB. DESCRIPTION: To meet PADEP and EPA requirements, Pennsylvania-American Water Company (PAWC) is required to replace all lead and lead impacted galvanized water service lines. PAWC has numerous lead service lines in these areas and is working to replace the ones that we have currently identified.

APPLICANT NAME: THE MUNICIPAL AUTHORITY OF THE BOROUGH OF PORTAGE - WATERLINE & METER REPLACEMENT PROJECT	REGION: V	DEP PROJECT RATING: 69
STREET ADDRESS: 606 CAMBRIA STREET	PWSID: 4110027	PROJRANK: 10 of 78
CITY: PORTAGE	LOAN # 82251	PROJECT COST: \$16,565,000
COUNTY: CAMBRIA	FUND SOURCE: DWSRF	PROJECT TYPE: DS, LSL
	MTGDATE: 7/16/2025	
PROJ. DESCRIPTION: The proposed project includes the installation of approximately 34,500 linear feet of water mains, approximately 15,700 linear feet of service lines, 24 fire hydrants, approximately 580 meter pits, and appurtenances by utilizing mostly open trench methods of excavation. Installations around railroad crossings and stream crossings will be completed by jack and bore to allow ease of replacement in the future, if required. The project also consists of replacing 6 identified lead and galvanized service lines and during construction, if any additional lead and galvanized service lines are encountered, the contractor will replace those as well.		
PROB. DESCRIPTION: Old, antiquated lines, exist in the system, many of which are nearing 100 years of service. This area has seen more breaks and leaks in recent months. Since the Authority has a high unaccounted water loss of 62.9%, this area seems to be a place to start water line replacement since it has a lot of older lines. As per a recommendation from the DEP, many of the meters will be removed from the structures and placed in meter pits at the property lines.

APPLICANT NAME:	WESTERN BERKS WATER AUTHORITY - WATER TREATMENT PLANT IMPROVEMENTS	REGION:	III	DEP PROJECT RATING:	66
STREET ADDRESS:	91 WATER ROAD	PWSID:	3060066	PROJRANK:	13 of 78
CITY:	SINKING SPRING	LOAN #	80313	PROJECT COST:	\$41,060,000
COUNTY:	BERKS	FUND SOURCE:	DWSRF	PROJECT TYPE:	TREAT
		MTGDATE:	10/15/2025		

PROJ. DESCRIPTION: The project includes additions and modifications to the Authority's water treatment plant (WTP) which will enable the facility to provide a long-term, reliable quality and quantity of water. A new sulfuric acid chemical feed system will be added so that the pH of the water entering the WTP can be regulated. The coagulant, fluoride, chlorine, polyphosphate, and ammonium sulfate chemical feed systems will be upgraded with new chemical feed pumps, storage tanks, feed lines, and appurtenances which will allow the Authority to treat water from Blue Marsh Lake during harmful algal bloom (HAB) events and when elevated levels of cyanotoxins, specifically microcystin, are present in the source water. The existing, outdated Greenleaf filters will be demolished and replaced with four new dual-media rapid rate gravity filters, each with a capacity of 2.67 million gallons per day (MGD). This will allow the WTP to operate at its maximum capacity of 8 million gallons per day(MGD) with one filter out of service. The existing clearwell will be baffled and a new 400,000-gallon clearwell will be constructed to enhance the resiliency of the WTP's disinfection system. Four new 1,800 gallons per minute high service pumps are proposed. Improvements to the sludge handling and processing systems will include a new 54,000-gallon backwash receiving tank, new sludge mixers and pumps, and an additional 3,000-square feet of sludge drying area. WTP's electrical, instrumentation, and process control systems will be upgraded to support the plant improvements.

PROB. DESCRIPTION: The Authority's water treatment plant (WTP) serves approximately 25,000 residents in Berks County, PA. The WTP is nearly 50 years old, and many treatment plant components have reached the end of their service life. The Authority has identified deteriorating chemical feed equipment, suboptimal filter backwashing, lack of operational flexibility in the clearwell, and insufficient sludge handling capacity as problems that need to be addressed in a complete WTP rehabilitation. Additionally, the emerging presence of harmful algal blooms (HABs) and cyanotoxins in Blue Marsh Lake present treatment challenges that the current WTP is not equipped to handle. Water quality data collected from Blue Marsh Lake between 2019 and 2024 showed that the average microcystin concentration was about 12.7-ppb and the maximum was 306-ppb. These are significantly higher than the EPA's 10-day Drinking Water Health Advisory Levels (HAL's) for microcystins, which are 1.6-ppb for school-age children and adults, and 0.3-ppb for bottle-fed infants and pre-school children.

COUNTY:	PHILADELPHIA	FUND SOURCE:	DWSRF	PROJECT TYPE:	PS
		MTGDATE:	10/15/2025		
PROJ. DESCRIPTION:	This project includes a new pump station at George's Hill Reservoir that will have the capacity to meet the typical peak daily demand of the Belmont High Pressure District at 21 million gallon per day (MGD) with six (6) pumps, redundant feed systems, standby generator, and on-site stormwater management. The upgrades to the existing Belmont station will include replacement of the pumps and interior modifications.				
PROB. DESCRIPTION:	The new George's Hill Pump Station is required to provide redundancy to the Belmont High Service Pressure District and will draw water from the lower regions of West Philadelphia and pump it up to the northern section of this region. The existing Belmont High Pump Station must be upgraded to allow it to work in tandem with the new station. This critical infrastructure will improve functionality and increase resilience during emergency operations.

APPLICANT NAME:	BUCKINGHAM TOWNSHIP HEARTHSTONE PFAS TREATMENT	REGION:	I	DEP PROJECT RATING:	60
STREET ADDRESS:	3103 PHILMONT AVENUE	PWSID:	1090137	PROJRANK:	15 of 78
CITY:	HUNTINGDON VALLEY	LOAN #	80301	PROJECT COST:	\$2,672,152
COUNTY:	BUCKS	FUND SOURCE:	DWSRF	PROJECT TYPE:	PFAS
		MTGDATE:	7/16/2025		
PROJ. DESCRIPTION:	The proposed treatment system will include a new building to house the proposed treatment system, air stripper, transfer pumps, granular activated carbon (GAC) filtration, and a backwash holding tank. The project will require an air stripper to reduce the radon that will be absorbed. SCADA controls will be installed to tie the PFAS system into the main control system. The project will be located at the Hearthstone Treatment Facility, which serves as a combined treatment facility for wells CS-3 and CS-4.				
PROB. DESCRIPTION:	The Buckingham Township Cold Spring System serves residents in the northern portion of the Township. Samples of water collected at Entry Point (EP) 102 for wells CS-3 and CS-4 have been analyzed for PFOA and PFOS. Analytical results indicate PFOS levels of 12.56 ppt and PFOA level o 13.31 ppt at EP 102. It was also determined that an air stripper will be required to reduce the radon level in the water which impact the carbon disposal. The radon level, while not excessive, would cause a higher level of radioactive carbon for disposal which could cause higher disposal or reconditioning costs for the carbon.

PROJ. DESCRIPTION: The project scope includes: (1) Site piping improvements for the Clearwell and on-site distribution storage tanks to provide automatic shutdown capability isolating the Clearwell from distribution storage in accordance with Consent Order and Agreement (COA) with the Department; (2) Flocculation and clarifier improvements for construction of a new flocculation tank with flash mixing, installation of new Lamella plate clarifier equipment inside of existing clarifier tank and demolition of exterior circular clarifier; (3) Repair and improvements to backwash equalization chamber and piping; (4) General electrical and control system improvements; and (5) Construction of an addition to the main building.

PROB. DESCRIPTION: The Borough entered into a COA with the Department on June 27, 2024, to improve the Brackenridge Water Plant. The COA required the Borough to perform site piping improvements for the Clearwell and install on-site distribution storage tanks providing automatic shutdown capability to isolate the Clearwell from distribution storage. Other improvements are being proposed as well.

AMENDED FEDERAL FY2026 - PROJECT PRIORITY LIST

UPDATED JULY 20, 2026

APPLICANT NAME:	NANTY GLO WATER AUTHORITY - WATER TREATMENT FACILITY UPGRADES	REGION:	V	DEP PROJECT RATING:	58
STREET ADDRESS:	872 CHESTNUT STREET	PWSID:	4110023	PROJRANK:	17 of 78
CITY:	NANTY GLO	LOAN #	85235	PROJECT COST:	\$7,251,615
COUNTY:	CAMBRIA	FUND SOURCE:	DWSRF	PROJECT TYPE:	TREAT
		MTGDATE:	7/15/2026		
PROJ. DESCRIPTION:	The Nanty Glo Water Authority intends to undertake a Water Treatment Plant (WTP) Upgrade Project. This project involves the installation of an additional filter and rebuilding the 2 existing filters, which will increase the overall capacity of the plant. The project will also include replacing the existing mixing manifold with a static mixer, installing a second backwash tank and an auxiliary plate settling vault, storage garage and the installation of all electrical, control, and plumbing equipment necessary to operate these new units and ensure compliance with environmental regulations. The project will also include several architectural & HVAC improvements to the building; the construction of a new garage to house equipment, materials and parts; and installation of an emergency shut down vault on the finished waterline downstream of the clearwell/tank. The absorption beds will also be cleared out to accommodate additional sludge storage.				
PROB. DESCRIPTION:	Over the years, due to a combination of increased system demand and seasonal water quality issues with the Nanty Glo Water Authority (NGWA)'s primary source, the emergency interconnect with Ebensburg Municipal Authority (EMA) has been exercised more frequently than anticipated. NGWA's current sources cannot meet minimum resiliency requirements for current water demand. If the existing reservoir source is compromised, the EMA interconnect would need to supply an average of more than 1 MGD based on the annual average daily demand for 2021 and 2022. Due to EMA's current water supply obligations, EMA can only supply approximately 0.39 MGD through the interconnect for an extended period. Insufficient backup water supply not only makes NGWA vulnerable to any extended loss of their primary source in an emergency, but it also limits their ability to properly maintain their existing source and treatment facility. During poor water quality conditions, the throughput to the existing dual filters can be reduced by the addition of newly proposed third filter while maintaining filter run times between backwashes and still meeting system demand. There are also problems of NPDES discharge with the water reclamation system, so instead, all the wastewater has been discharged to the Class V injection wells. However, those have become inundated and overflow since the injection wells were only designed to receive the volume of the plate settler vault once per day to provide allocation for the solids to accumulate while limiting the quantity of water to infiltrate.

APPLICANT NAME: MADISONBURG WATER WORKS - CONTACT TIME PIPING	REGION: IV	DEP PROJECT RATING: 58
STREET ADDRESS: C/O H DUCK	PWSID: 4140111	PROJRANK: 18 of 78
CITY: MADISONBURG	LOAN # 12841	PROJECT COST: \$875,000
COUNTY: CENTRE	FUND SOURCE: STATE BYPASS	PROJECT TYPE: TRANS
	MTGDATE: 7/15/2026	
PROJ. DESCRIPTION: This project will install approximately 1,030 linear feet of 12-inch PVC piping in a serpentine configuration after the existing clearwell and prior to the existing water storage tank to allow additional chlorine contact time within the system before the water storage tank. A chemical vault will also be constructed before the water storage tank to accommodate a new chlorine analyzer and sample tap. Two new valves are also proposed during this project after the chemical vault, creating a blowff and entry-point shutdown before the water storage tank. Approximately 40 feet of 4-inch PVC piping will be installed after the valve vault, with part of that connecting into the existing piping to the water storage tank while the other part of that piping will serve as a blowoff location for non-compliant water. This project also includes the installation of approximately 400 linear feet of 1-inch PVC conduit for electric services to the chlorine analyzer as well as SCADA upgrades to the water treatment plant to be able to serve the new chlorine analyzer.		
PROB. DESCRIPTION: This project will allow Madisonburg Water Works to correct the entry point shutdown requirement. During a PADEP inspection on May 16 and 17, 2023, PADEP personnel observed that the Madisonburg Water Works had failed to provide any entry point shutdown capabilities. This is violation of of the PADEP Regulations. A July 18, 2023 PADEP inspection report included a Notice of Violation for the MWW failure to provide any entry point shutdown capabilities, in violation of Section 109.602(i) of PADEP Regulations, 25 Pa. Code§ 109.602(i). On December 21, 2023, MWW was issued a fully executed Consent Order and Agreement between the Commonwealth of Pennsylvania, Department of Environmental Protection and the Madisonburg Water Works.

COUNTY: ALLEGHENY		FUND SOURCE: DWSRF	PROJECT TYPE: DS
		MTGDATE: 10/15/2025	
PROJ. DESCRIPTION: This project will replace an estimated 49,710 feet of 4-inch and 16-inch water lines thus replacing older and undersized mains. 2023 Small Diameter Water Main Replacement – Contract A2, 2024 Small Diameter Water Main Replacement – Contract B, and 2024 Small Diameter Water Main Replacement – Contract C include the replacement of aging 4” to 16” diameter pipes with new zinc coated ductile iron pipe ranging from 4” to 16”. This work includes the replacement of water mains, valves, fire hydrants, and water service lines. Water mains were selected for replacement based on a number of risk-factors, including the prioritization of undersized mains, and mains with a history of break.			
PROB. DESCRIPTION: Due to the advanced age of the pipes, replacement of these mains will reduce the frequency of water main breaks, which will minimize the risk to public health caused by the resulting potential exposure to infectious diseases and will reduce the impact of unplanned water outages and street closures required due to emergency repairs. The replacement of older, leak prone mains will also provide for more efficient management of water resources by reducing the amount of treated water that is lost from the system. Furthermore, the additional volume of water that will be able to be delivered to areas with inadequate flow will reduce restrictions on development within the affected areas.

		MTGDATE:	7/16/2025		
PROJ. DESCRIPTION:	The existing ozonation systems at the Kettle WTP (one treatment train) and the Horseshoe Curve WTP (two treatment trains) will be replaced with new equipment including systems for liquid oxygen storage and preparation, nitrogen generation, ozone generation, gas injection, ozone destruction, and ambient gas monitoring. Additionally, the aluminum sulfate and sodium hydroxide bulk chemical storage tanks will be replaced at the Horseshoe Curve WTP.				
PROB. DESCRIPTION:	The Altoona Water Authority (Authority) operates six (6) water treatment plants (WTPs), all of which use ozone for the dual purposes of taste/odor control and oxidation of iron/manganese. Ozonation systems were first installed in each of the WTPs in the 1990s, and those systems started reaching the end of their design life after almost 30 years of use. The old systems are no longer manufactured and the Authority has found it difficult to acquire spare parts. The Authority has upgraded the ozone systems at the Mill Run, Plane Nine, and Tipton WTPs and upgrades at the Bellwood WTP are currently under construction. Similar upgrades are now planned for the Kettle WTP and the Horseshoe Curve WTP.

COUNTY:	COLUMBIA	FUND SOURCE:	DWSRF	PROJECT TYPE:	TREAT, PFAS
		MTGDATE:	10/15/2025		
PROJ. DESCRIPTION:	This project includes constructing a new water treatment plant (WTP). Raw water from the four wells will be conveyed from the Canal Street well site via a new pipeline to the new WTP. The WTP will have a buried clearwell, wetwell, and granular activated carbon (GAC) pressure filters. Disinfection and corrosion control will be included at the new facility. Sodium hypochlorite will replace the existing gas chlorine system. A corrosion inhibitor will be used, consistent with the current chemical used at the existing treatment site. The finished water will be conveyed from the new WTP to the existing distribution system via a new finished water transmission main.				
PROB. DESCRIPTION:	The project aims to add the perfluoroalkyl and polyfluoroalkyl substances (PFAS) removal capabilities at the Pennsylvania American Water Company (PAWC) Berwick facilities. Current well source has identified PFOA level of 11.5 ppt. The project will reduce the PFOA levels in the finished drinking water to the customers.

APPLICANT NAME: DOYLESTOWN TOWNSHIP MUNICIPAL AUTHORITY NORTH WELLS #3 AND #4 PFAS TREATMENT	REGION: I	DEP PROJECT RATING: 50
STREET ADDRESS: 425 WELLS ROAD	PWSID: 1090128	PROJRANK: 22 of 78
CITY: DOYELSTOWN	LOAN # 81140	PROJECT COST: \$4,440,800
COUNTY: BUCKS	FUND SOURCE: DWSRF	PROJECT TYPE: TREAT, PFAS
	MTGDATE: 4/15/2026	
PROJ. DESCRIPTION: Proposed plans include construction of a new treatment building, which will house two Greensand Plus filters for removal of manganese, two granular activated carbon (GAC) filter vessels for removal of PFAS, and new chlorination and ortho/polyphosphate equipment. A new chlorine detention tank will be installed, as well as a 30,000-gallon aboveground holding tank to store PFAS media backwash water. This project includes removal of the existing well house, detention tanks, and related chemical feed equipment.		
PROB. DESCRIPTION: The Doylestown Township Municipal Authority Main System (PWS ID# 1090128), referenced herein as DTMA, serves the townships of Doylestown, Plumstead, and Buckingham, as well as the New Britain Borough in Bucks County. DTMA has been monitoring perfluoroalkyl substances (PFAS) in its water supply. Samples of water collected at Entry Point (EP) 107 has been analyzed for perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS). Analytical results indicate exceedances of the PFOA Maximum Contaminant Level (MCL) of at EP 107, as well as exceedances of the secondary contaminant MCL (0.05 mg/L) for manganese at EP 107. Water samples collected at Entry Point 107 for North Wells 3 & 4 exhibited elevated PFAS levels in 2024 and 2025, as follows averaged values): 12.7 ng/L PFOA and 7.2 ng/L PFOS. In addition, manganese has exceeded the state secondary MCL (0.12 mg/L averaged).

APPLICANT NAME: GENERAL AUTHORITY OF THE CITY OF FRANKLIN - BARRETT FLATS WTP REPLACEMENT	REGION: VI	DEP PROJECT RATING: 48
STREET ADDRESS: 430 13TH STREET	PWSID: 6610020	PROJRANK: 25 of 78
CITY: FRANKLIN	LOAN # 85237	PROJECT COST: \$9,988,500
COUNTY: VENANGO	FUND SOURCE: DWSRF	PROJECT TYPE: TREAT
	MTGDATE: 7/15/2026	
PROJ. DESCRIPTION: The Barrett Flats water treatment plant (WTP) project consists of constructing: (A) 3,700 square foot building housing one (1) set of finished water pumps (primary and standby) dedicated to pumping to the Miller Hill pressure district; (B) one (1) set of finished water pumps (primary and standby) capable of pumping to the City pressure district and accommodations for the future addition of one (1) set of finished water pumps (primary and standby) capable of pumping to the Oak Hill pressure district; and (C) a gaseous chlorine feed room, a polyphosphate chemical feed room, laboratory, restrooms, breakroom, and storage room. The WTP will also include two (2) new clearwell tanks with a total capacity of approximately 71,000 gallons, an emergency generator, and a parking area. Well water will be pumped to the clearwell tanks via a 12-inch diameter raw water main. Gaseous chlorine and polyphosphates will be added to the well water prior to the clearwell tanks via injection points on the raw water main. The water will be held in the clearwell tanks in order to achieve the appropriate contact time prior to being pumped.		
PROB. DESCRIPTION: Since the initial development of the Barrett Flats and 9th Street well fields, water quality at the 9th Street well field has degraded due to elevated levels of iron and manganese. Additionally, treatment and pumping facilities at the existing Barrett Flats WTP are not adequate to utilize the six (6) existing Barrett Flats wells. Also, a secondary Barrett Flats well field was developed but never permitted due to the limited treatment and pumping capacity of the existing Barrett Flats WTP. Additionally, the Water Supply Inspection Report from the PA DEP inspection conducted on July 24, 2024, noted that the existing building is becoming unsafe to work within as it has wooden floors that have rotted away, floor hatches that are rusting, and the pipes for the groundwater treatment are a tripping hazard. The report noted that these issues are a violation and recommended to pursue the WTP replacement as quickly as possible with operator's safety in mind.

APPLICANT NAME: CHESTER WATER AUTHORITY SUSQUEHANNA PUMPING STATION RELIABILITY IMPROVEMENTS	REGION: I	DEP PROJECT RATING: 48
STREET ADDRESS: P.O. BOX 467	PWSID: 1230004	PROJRANK: 27 of 78
CITY: CHESTER	LOAN # 80307	PROJECT COST: \$19,277,386
COUNTY: CHESTER	FUND SOURCE: DWSRF	PROJECT TYPE: PS, TREAT
	MTGDATE: 10/15/2025	

PROJ. DESCRIPTION: The scope of the major station improvements is to replace the existing three constant feed pumps (Pumps #1-3) with 1,500 HP vertical turbine pumps with new variable frequency drives (VFDs); o Remove existing variable speed pump (Pump No. 4); Install a 2800 kW backup generator capable of running (2) of the 1,500 HP pumps on VFDs; replace the existing switchgear equipment and transformer; replace the existing 1,000 kW generator with a smaller power generator used for house power and SCADA reliability; remove hydraulic system on discharge valves and replace with combination electrical and individual hydraulic actuators capable of the necessary valve closing times during an emergency pump stop; remove unnecessary bypass and backflush piping; replace permanganate dry chemical system with liquid skid-mounted sodium permanganate chemical system with two (2) positive displacement pumps; demolish existing Chemical Building and constructing a new Chemical Storage Room next to the Pumping Station Building; replace existing control system equipment with up-to-date hardware and network infrastructure.

PROB. DESCRIPTION: Chester Water Authority (CWA) is seeking funding for reliability improvements of their Susquehanna Booster Station. The Susquehanna Raw Water Pumping Station provides the only alternate source water to Chester Water Authority's Octoraro Water Treatment Plant's primary source water, the Octoraro Reservoir. In recent years, operational challenges have limited the station's functionality. Some of the station's components have reached their serviceable lifespan and are due for replacement. Other systems require upgrades to improve operational functionality and reliability. These improvements will provide increased station functionality and reliability with additional flow control, reduced maintenance, and improved emergency power systems. The project location will be within Fulton Township in Lancaster County; however, these facilities are permitted by the DEP Southeast Regional Office as the facilities serve customers in Chester and Delaware Counties.

APPLICANT NAME: THE MUNICIPAL AUTHORITY OF THE TOWNSHIP OF WASHINGTON - WATER SYSTEM IMPROVEMENTS	REGION: V	DEP PROJECT RATING: 46
STREET ADDRESS: 1390 FAYETTE AVE	PWSID: 5260009	PROJRANK: 28 of 78
CITY: BELLE VERNON	LOAN # 82252	PROJECT COST: \$5,100,000
COUNTY: FAYETTE	FUND SOURCE: DWSRF	PROJECT TYPE: TREAT, DS
	MTGDATE: 7/16/2025	
PROJ. DESCRIPTION: The Authority is proposing to replace the motor control center, raw water pump, and supervisory control and data acquisition (SCADA) system at its existing water treatment plant as well as the replacing approximately 15,000 linear feet of 6-inch, 8-inch and 12-inch diameter water lines. The project also includes the rehabilitation of the water treatment plant filters. Air scour will be provided through new underdrains within the filters. New filter media and filter troughs will also be provided as a part of the project.		
PROB. DESCRIPTION: Most of the equipment within the motor control center is outdated and reached the end of its useful life. If the motor control center failed, the Authority would not be able to produce water for a number of days. The Department has identified several issues with the filters, including loss of media and leaking troughs. Furthermore, the Department has recommended that the Authority add an air scour system to the filters. The SCADA system was installed on the water distribution system in 2006. Much of the control system equipment is now outdated. The Authority has also identified ten sections of water lines throughout the system that need to be replaced. Most of these water lines are 2-inch diameter, which is not properly sized for fire hydrants. Additionally, this reduced line size results in higher pumping costs to the Authority. These water lines also have a history of breaks which cause water outages to the Authority's customers as well as excessive and costly damages to public roads and private property.

APPLICANT NAME: HIGHLAND SEWER AND WATER AUTHORITY - CROYLE WATER LINE PROJECT CONTRACT 2025-W-03	REGION: V	DEP PROJECT RATING: 45
STREET ADDRESS: 120 TANK DRIVE	PWSID: 4110017	PROJRANK: 29 of 78
CITY: JOHNSTOWN	LOAN # 82259	PROJECT COST: \$8,266,350
COUNTY: CAMBRIA	FUND SOURCE: DWSRF	PROJECT TYPE: DS, METERS
	MTGDATE: 4/15/2026	

PROJ. DESCRIPTION: The Highland Sewer and Water Authority (HSWA) is proposing the Croyle water line improvement project located in Cambria County. The third phase called Contract 2025-W-03, includes installation of 51,000 linear feet (LF) of transmission and distribution waterline with all necessary appurtenances within Croyle Township, East Taylor Township, and Cambria Township. Work includes the installation of water line, water service line from the water main to the property line, and water appurtenances necessary for the system. Three new pressure relief valve (PRV) vaults are to be added to the system to reduce dangerous pressure levels that currently exist within the Croyle Township main lines. The project will also include the installation of new meter pits and residential service meters for all Croyle customers along the alignment to modernize metering and allow for better integration into the HSWA system.

PROB. DESCRIPTION: Highland Sewer and Water Authority (HSWA) owns and operates a water treatment plant and public water distribution system which serves over 10,000 customers in 17 different municipalities within Cambria County, PA. Additionally, HSWA sells "bulk" water to 13 smaller water utility owners which distribute and re-sell water to their customers. One of these utility owners is Croyle Township Water Authority (CTWA) (which serves 4 different municipalities). CTWA purchases all their water from HSWA. Due to difficulties managing and maintaining a public water system, CTWA is proposing to transfer ownership and operation of their water system to HSWA. Ownership will be transferred to HSWA, and HSWA will take over billing for these customers. There will be no interruption of service or changes in water quality because of this transfer. Prior to assuming ownership, HSWA is proposing many of the older or problematic water lines be replaced within the CTWA system. The pipes and appurtenances within the system are past their anticipated useful life and are prone to breaks and water loss. The additional tanks and pump stations will also improve water pressure conditions as well as the longevity and serviceability of the system.

AMENDED FEDERAL FY2026 - PROJECT PRIORITY LIST

UPDATED JULY 20, 2026

APPLICANT NAME: HIGHLAND SEWER AND WATER AUTHORITY - CROYLE WATER LINE PROJECT CONTRACT 2025-W-02	REGION: V	DEP PROJECT RATING: 45
STREET ADDRESS: 120 TANK DRIVE	PWSID: 4110017	PROJRANK: 30 of 78
CITY: JOHNSTOWN	LOAN # 80317	PROJECT COST: \$8,226,760
COUNTY: CAMBRIA	FUND SOURCE: DWSRF	PROJECT TYPE: DS, METERS
	MTGDATE: 1/21/2026	

PROJ. DESCRIPTION: The Highland Sewer and Water Authority (HSWA) is proposing the Croyle waterline improvement project located in Cambria county. This second phase, called Contract 2025-W-02, includes the installation of 45,000 linear feet (LF) of water line, water service lines from the water main to the property line, and water appurtenances necessary for the system. The project will also include the installation of new meter pits and residential service meters for all Croyle customers to modernize metering and allow for better integration into the HSWA system.

PROB. DESCRIPTION: Highland Sewer and Water Authority (HSWA) owns and operates a water treatment plant and public water distribution system which serves over 10,000 customers in 17 different municipalities within Cambria County, PA. Additionally, HSWA sells "bulk" water to 13 smaller water utility owners which distribute and re-sell water to their customers. One of these utility owners is Croyle Township Water Authority (CTWA) (which serves 4 different municipalities). CTWA purchases all their water from HSWA. Due to difficulties managing and maintaining a public water system, CTWA is proposing to transfer ownership and operation of their water system to HSWA. Ownership will be transferred to HSWA, and HSWA will take over billing for these customers. There will be no interruption of service or changes in water quality because of this transfer. Prior to assuming ownership, HSWA is proposing many of the older or problematic water lines be replaced within the CTWA system. The pipes and appurtenances within the system are past their anticipated useful life and are prone to breaks and water loss.

AMENDED FEDERAL FY2026 - PROJECT PRIORITY LIST

UPDATED JULY 20, 2026

APPLICANT NAME: WINDBER AREA AUTHORITY - MINE 40 WATERLINE REPLACEMENT PROJECT	REGION: V	DEP PROJECT RATING: 45
STREET ADDRESS: 1409 SOMERSET AVENUE	PWSID: 4560013	PROJRANK: 31 of 78
CITY: WINDBER	LOAN # 82256	PROJECT COST: \$4,195,560
COUNTY: CAMBRIA	FUND SOURCE: DWSRF	PROJECT TYPE: DS
	MTGDATE: 4/15/2026	
PROJ. DESCRIPTION: This project primarily consists of the installation of approximately 9,650 LF of new 6-inch diameter through 12-inch diameter water distribution piping as well as associated infrastructure for both distribution piping and water service connections to approximately 224 users. Water service connection infrastructure is anticipated to include water service lines, appurtenances, and meter pits. The existing Authority-owned water service piping will be replaced to the customers' private property line as part of the project. Work will in most cases end at the private property lines; however, several sections of Authority-owned service lines need to be replaced within private property boundaries. Easements will be obtained for these sections as needed.		
PROB. DESCRIPTION: The existing waterlines within the Mine 40 Area are a mixture of 120-year old 4-inch cast-iron pipe and approximately 40-year-old asbestos cement pipe. Most service lines in this area are composed of approximately 70-year old copper line. There are some 100-year old galvanized service lines present as well. Line breaks and reduced fire flow rates are an issue. In addition, Scalp Level Borough's upcoming Sanitary Sewer & Storm Sewer Rehab/Separation Project is in the same project area and anticipated to put additional stress on the existing lines. The new sewer lines will cross the existing water lines in many locations. Water loss is also an issue system-wide. No lead service lines are known to exist within the project area.

AMENDED FEDERAL FY2026 - PROJECT PRIORITY LIST

UPDATED JULY 20, 2026

APPLICANT NAME:	KLINE TOWNSHIP MUNICIPAL AUTHORITY - SNYDER AVE WATERLINE	REGION:	II	DEP PROJECT RATING:	45
STREET ADDRESS:	1110 SOUTH CHURCH STREET	PWSID:	3540014	PROJRANK:	32 of 78
CITY:	HAZLETON	LOAN #	82265	PROJECT COST:	\$2,495,000
COUNTY:	SCHUYLKILL	FUND SOURCE:	DWSRF	PROJECT TYPE:	DIST
		MTGDATE:	7/15/2026		
PROJ. DESCRIPTION:	The Snyder Avenue Water Main Replacement project consists of approximately 4,200 LF of water main replacement along Snyder Avenue, Marcus Street, Bayview Terrace, and Hillside Road in Kline Township, Schuylkill County, PA. The existing water mains are small diameter, primarily 4-inch asbestos cement pipe, with some sections of 2-inch and 3-inch steel pipe located through private property. The proposed improvements will replace these lines with an 8-inch diameter water main installed within public rights-of-way. The project will also include fire hydrant replacement as well as replacement of existing water service lines, many of which are galvanized steel. This area has historically experienced a high frequency of service line failures and leaks, which will be addressed through this project.				
PROB. DESCRIPTION:	The Snyder Avenue project addresses aging and undersized water mains that are prone to leaks, failures, and service disruptions. Portions of the existing system are located on private property and consist of outdated materials that contribute to ongoing maintenance issues and reduced reliability. These conditions also limit the effectiveness of fire protection in the area. The project will correct these deficiencies by replacing the deteriorated infrastructure and relocating the system into public rights-of-way.

CITY:	JOHNSTOWN	LOAN #	80304	PROJECT COST:	\$8,516,670
COUNTY:	CAMBRIA	FUND SOURCE:	DWSRF	PROJECT TYPE:	WS, PS
		MTGDATE:	10/15/2025		
PROJ. DESCRIPTION:	Highland Sewer and Water Authority (HSWA) is proposing the Croyle Water Project. The project is located in Cambria Township, Croyle Township, East Taylor Township, Jackson Township, and Summerhill Borough, Cambria County, Pennsylvania. HSWA is proposing to complete a water system improvement that includes the addition and replacement of all necessary appurtenances within the Beaverdam system through multiple phases. For the first phase (called as Contract 2025-W-1), the project consists of the installation of three water storage tanks and three pump stations (two new water tanks and a pump station will be added to the system; A tank and two existing pump stations will be also replaced) as well as all appurtenances and site work necessary to complete these installations and connection to the proposed waterline to be installed under the applications of future phases.				
PROB. DESCRIPTION:	Highland Sewer and Water Authority (HSWA) owns and operates a water treatment plant and public water distribution system which serves over 10,000 customers in 17 different municipalities within Cambria County, PA. Additionally, HSWA sells "bulk" water to 13 smaller water utility owners which distribute and re-sell water to their customers. One of these utility owners is Croyle Township Water Authority (CTWA) (which servers 4 different municipalities). CTWA purchases all their water from HSWA. Due to difficulties managing and maintaining a public water system, CTWA is proposing to transfer ownership and operation of their water system to HSWA. Ownership will be transferred to HSWA, and HSWA will take over billing for these customers. There will be no interruption of service or changes in water quality because of this transfer. Prior to assuming ownership, HSWA is proposing many of the older or problematic water lines be replaced within the CTWA system. The pipes and appurtenances within the system are past their anticipated useful life and are prone to breaks and water loss. The additional tanks and pump stations will improve water pressure conditions, the longevity and serviceability of the system.

APPLICANT NAME: PENNSYLVANIA AMERICAN WATER COMPANY - PINE HILL WELL PFAS/MN TREATMENT IMPROVEMENTS	REGION: II	DEP PROJECT RATING: 43
STREET ADDRESS: P O BOX 718	PWSID: 2450063	PROJRANK: 34 of 78
CITY: MOUNT POCONO	LOAN # 80312	PROJECT COST: \$5,046,571
COUNTY: MONROE	FUND SOURCE: DWSRF	PROJECT TYPE: TREAT, PFAS
	MTGDATE: 10/15/2025	
PROJ. DESCRIPTION: The project includes the demolition of the existing wellhouse and construction of a new treatment facility at the existing Pine Hill well station, disposal of process wastewater, and other related work to address PFAS and iron and manganese in the raw water. The new treatment facility will include GAC adsorbers and green sand filters. New concrete tanks will be utilized for holding backwash waste. Further chemical feed system improvements to help meet the requirements. New 4-inch ductile will be installed for raw flow to the treatment building. The existing submersible well pump will be replaced, and the existing high service pumps will be replaced.		
PROB. DESCRIPTION: Pine Hill Well - The Pine Hill well shows PFOS level of 6.6 ppt and PFOA level of 4.7 ppt. Manganese sampling levels of 0.64 mg/L exceeding the secondary MCL of 0.05 mg/L.

UPDATED JULY 20, 2026

APPLICANT NAME: PA AMERICAN WATER COMPANY - BUTLER WATER TREATMENT PLANT FILTER IMPROVEMENTS	REGION: VI	DEP PROJECT RATING: 43
STREET ADDRESS: 2936 ELLWOOD ROAD	PWSID: 5100012	PROJRANK: 35 of 78
CITY: NEW CASTLE	LOAN # 80306	PROJECT COST: \$28,500,000
COUNTY: BUTLER	FUND SOURCE: DWSRF	PROJECT TYPE: TREAT
	MTGDATE: 10/15/2025	

PROJ. DESCRIPTION: The Project includes upgrading the Butler Water Treatment Plant's sedimentation and filtration systems to address capacity limitations and ensure reliable treatment, the demolishing three (3) aging Aldrich purification units, and constructing a new treatment building and concrete tank structure. Within this facility, three (3) 6-million-gallons-per-day (MGD) Actiflo ballasted flocculation and sedimentation trains will be installed, along with four (4) 4-MGD dual-media gravity filtration units with air scouring capability providing 12.0 MGD capacity with one (1) unit out of service. The project also includes rerouting process piping (influent, effluent, wash water, wastewater, sanitary, and filter to waste lines), rerouting chemical feed lines, and electrical and control system modifications as well as related work. The improvements will be constructed in phases to maintain plant operation and minimize service disruptions.

PROB. DESCRIPTION: The existing WTP utilizes three (3) Aldrich purification units to perform mechanical flocculation, sedimentation, and filtration. While the facility has a rated capacity of 11.9 MGD with all units in service, its capacity is reduced to 7.1 MGD when one unit is out of service, which will not meet the projected maximum day demand of the system. The existing water treatment plant has capacity limitations and needs improved water treatment reliability. With aging infrastructure, the sedimentation and filtration performance of the existing Aldrich units is no longer optimal, and the risk of system shortfall during peak demand or unit outages poses a threat to water system resiliency.

COUNTY:	ERIE	FUND SOURCE:	DWSRF	PROJECT TYPE:	PS
		MTGDATE:	7/16/2025		

PROJ. DESCRIPTION: The proposed Pro-Fi application will include the following projects, with the Sigsbee Pump Station Upgrade planned to be the lead project: Sigsbee Pump Station Upgrade; RSW WTP West Lake Pump Station and Low Duty Pump Station Variable Frequency Drives; RSW WTP Low Service Pump Station Variable Frequency Drives; Sigsbee Reservoir Valve Vault Reconstruction; Kuntz Road Water Main Replacement; McClelland Avenue Water Main Replacement; Frontier Area (Backyards) Water Main Replacements.

PROB. DESCRIPTION: This application is being made in conjunction with the PENNVEST Programmatic Financing guidelines and addresses seven projects in the Erie Water Works Capital Improvement Plan. The lead shovel ready project is the Sigsbee Pump Station Upgrade. The soft starters at the Sigsbee Pump Station are obsolete and one of the existing three pumps is inoperable. There are no parts for the starters and if failure occurs they have to be replaced with new starters, however, Staff intends to utilize variable frequency drives (VFD) in the future to accurately control flow and pressure under any circumstance. All three pumps will be replaced, electrical gear will be updated, the roof and windows will be replaced, and other miscellaneous facility improvements will occur.

APPLICANT NAME: REDBANK VALLEY MUNICIPAL AUTHORITY - WATER SYSTEM IMPROVEMENTS	REGION: VI	DEP PROJECT RATING: 43
STREET ADDRESS: 212 LAFAYETTE ST	PWSID: 6160010	PROJRANK: 37 of 78
CITY: NEW BETHLEHEM	LOAN # 80315	PROJECT COST: \$7,346,392
COUNTY: CLARION	FUND SOURCE: DWSRF	PROJECT TYPE: TREAT, TRANS, DS
	MTGDATE: 1/21/2026	
PROJ. DESCRIPTION: This water system improvement project will include the installation of 9,880 linear feet (LF) of 6-inch diameter water line, 2,700 LF of 8-inch diameter water line, 1,800 LF of 10-inch diameter water line, fire hydrants, and appurtenances. In the water treatment plant, aging tube settlers will be replaced with inclined plate settlers and filter media.		
PROB. DESCRIPTION: Redbank Valley Municipal Authority has experienced 44 percent to 48 percent unaccounted for water losses in their distribution system. Leaks have been identified along the Olean Trail in Porter Township, and in New Bethlehem Borough. There is also a lack of fire protection along Broad Street in South Bethlehem Borough since the existing fire hydrants are not operable. The water treatment plant has also been underperforming. The existing project area has aging water lines that have had numerous breaks. The tube settlers need to be replaced to better trap the solids in the settling area.

APPLICANT NAME:	PENNSYLVANIA AMERICAN WATER COMPANY SUSQUEHANNA WATER TREATMENT PLANT	REGION:	II	DEP PROJECT RATING:	43
STREET ADDRESS:	216 WILLOW AVE	PWSID:	2580024	PROJRANK:	38 of 78
CITY:	SUSQUEHANNA DEPOT	LOAN #	85238	PROJECT COST:	\$25,000,000
COUNTY:	SUSQUEHANNA	FUND SOURCE:	DWSRF	PROJECT TYPE:	TREAT, TRANS
		MTGDATE:	7/15/2026		
PROJ. DESCRIPTION:	The new Susquehanna water treatment plant (WTP) will be constructed on the land currently owned by the Pennsylvania American Water Company (PAWC). A new 700 square feet raw water pump station will be built on PAWC's property along the north side of East Branch Canawacta Creek adjacent to two existing treatment tanks to be demolished. The raw water pump station will tie into the existing intake line. A new raw water transmission main will be installed from the pump station to the new WTP located 1.2 miles away. A finished water main will be in the same trench connecting to the distribution system. The new WTP will consist of a raw water impoundment, a treatment building, a clearwell building, two wastewater lagoons, and a recycle pump station. The building at the existing WTP will be retained for storage while the rest of the tanks and building will be demolished.				
PROB. DESCRIPTION:	The existing Susquehanna Water Treatment Plant (WTP), located in Harmony Township, Susquehanna County was originally constructed in 1930 and last underwent major upgrades in 1992. The facility treats surface water from the East Branch of the Canawacta Creek downstream of Comfort Lake and provides potable water to approximately 4,230 customer connections in the Susquehanna/Hallstead service area. Over the past decade increasing maintenance demands, structural concerns with the aging sedimentation basin, and overall facility deterioration have made continued long-term operation of the existing plant challenging. Pennsylvania American Water Company (PAWC) completed an internal investigation and concluded that, due to site constraints and the small available footprint, the existing plant cannot be fully upgraded. Addressing these conditions is needed to ensure continued regulatory compliance, maintain public health protection, and provide a reliable and efficient supply of drinking water for the community.

COUNTY:	CLINTON	FUND SOURCE:	DWSRF	PROJECT TYPE:	SRC, TREAT, TRANS
		MTGDATE:	10/15/2025		
PROJ. DESCRIPTION:	The project will include the development of two (2) groundwater wells that will be connected to the regional Central Clinton County Water Filtration Authority (CCCWFA) water treatment plant. The new well operation building will house electrical equipment, a supervisory control and data acquisition (SCADA) unit, transfer switch, and exterior emergency generator. Extension of 3-phase power to the well sites is also included. Approximately 9,545 linear feet of new 12-inch to 16-inch diameter well transmission line will interconnect to the water treatment plant by an exterior vault with all required internal plant pipe connections and chemical feed injection points. Additional treatment, filtration, disinfection, and finished water pumping will occur at the CCCWFA plant. A master pressure control and monitoring facility will be installed along Youngdale Road to regulate downstream system pressure and to meter water flow to the City service area.				
PROB. DESCRIPTION:	Recent water shortages caused by drought and inadequate reservoir capacity have resulted in frequent usage restrictions. Sometimes water reserves have been so limited that alternative water supplies were employed to provide drinking water to the service area.

AMENDED FEDERAL FY2026 - PROJECT PRIORITY LIST

UPDATED JULY 20, 2026

APPLICANT NAME:	BOROUGH OF HOOVERSVILLE - WILBUR WATER LINE EXTENSION CONTRACT 23636-02	REGION:	V	DEP PROJECT RATING:	42
STREET ADDRESS:	BOX 176	PWSID:	4560037	PROJRANK:	40 of 78
CITY:	HOOVERSVILLE	LOAN #	82264	PROJECT COST:	\$10,996,378
COUNTY:	SOMERSET	FUND SOURCE:	DWSRF	PROJECT TYPE:	WS, DIST, PS, METE
		MTGDATE:	7/15/2026		

PROJ. DESCRIPTION: The goal of the project is to create a connection to the Hooversville Borough water system. The Wilbur Community Water Company will be acquired and dissolved by Hooversville Borough at the completion of the project. The expanded water system serving Wilbur will be maintained and operated by Hooversville Borough. Work consists of the installation of approximately 26,810 linear feet of 8-inch PVC C-900 water distribution line (note: additional 4,190 ft will be constructed by different contract out of PENNVEST project) and all associated appurtenances (e.g. hydrants, meters, etc.), along with a pump station and two 30,000-gallon storage tanks. An existing water system (wells, two storage basins, and approximately 13,800 linear feet of 2-inch HDPE distribution line) that currently supplies Wilbur will be decommissioned following construction of the new facilities.

PROB. DESCRIPTION: The existing Wilbur Community Water Company (PWS ID PA4560050) is monitored by one person on a near-volunteer basis with little capital funds to resolve maintenance issues or invest in capital improvements. The continued operation of the existing system is unsustainable. Additionally, a Water Supply Inspection Report prepared by DEP in May 2023 lists a number of deficiencies within the water system that do not meet the design standards set forth in the Public Water Supply Manual. The current distribution lines are 2-inch diameter, which is less than DEP's recommendations in the Public Water Supply Manual. While breaks are not common, the Wilbur segment of the distribution system was installed 50 years ago. The existing underground concrete storage tanks are in disrepair and need to be replaced and if the system is to be expanded, additional storage will be necessary. The current water supply from the wells is high in iron as reported by the operator and so we assume a green sand filter would be needed if the system were to be acquired by Hooversville. The capacity of the wells is unknown but is limited to 10 gallons per minute by the pumps. None of the current customer connections are metered.

APPLICANT NAME:	SOUTHWESTERN CAMBRIA COUNTY WATER AUTHORITY ~ WATERLINE REPLACEMENT PROJECT	REGION:	V	DEP PROJECT RATING:	41
STREET ADDRESS:	1422 FRANKSTOWN ROAD	PWSID:	4110041	PROJRANK:	41 of 78
CITY:	JOHNSTOWN	LOAN #	82257	PROJECT COST:	\$15,253,200
COUNTY:	CAMBRIA	FUND SOURCE:	DWSRF	PROJECT TYPE:	DS, METERS
		MTGDATE:	4/15/2026		
PROJ. DESCRIPTION:	This project mainly consists of the installation of approximately 34,000 linear feet (LF) of waterline, the majority of which is 6-inch in diameter, approximately 5,000 LF of service lines, three PRV vaults, the replacement of approximately 277 curb stop assemblies, and the installation of approximately 277 meter pits and meters. The project also involves the installation of a new large water holding tank to replace an existing Mizel Water Storage tank constructed in 1967. This entails the demolition of the current tank and construction of a new tank within the same footprint. The waterlines along Frankstown Road and Ragers Hill Rd are major feed lines for the system. Piping size and telemetry will be analyzed to increase service reliability and fire flows; thus, the replacement sizes may vary throughout the project.				
PROB. DESCRIPTION:	A large portion of the Authority's water system is comprised of asbestos-concrete pipe installed in the 1950s and early 1960s. It is evident through leaks and water loss that much of this pipe is at the end of its life expectancy. The past several years has seen an increase in volume of water purchased while maintaining a consistent customer base. Currently, the Authority's customer meters capture only about 48% of the water purchased monthly. These issues have resulted in decreased water quality, distribution system operation issues, and decreased pressure to customers.

COUNTY:	FRANKLIN	FUND SOURCE:	DWSRF	PROJECT TYPE:	DIST
		MTGDATE:	7/15/2026		
PROJ. DESCRIPTION:	The project proposes a new water main to connect the Township and Village water systems, thereby eliminating the lack of redundant water sources in the Village system. The new main will include approximately 9,800 linear feet of 8" ductile iron water pipe. Appurtenances will include 10 fire hydrants, three (3) air release valve systems, and two (2) pressure reducing valve systems. Residents along the path of the new main will be given the option to connect to public water.				
PROB. DESCRIPTION:	Quincy Township currently operates two independent water systems, which are its main "Township System" (PWSID 7280074) and the "Village System" (PWSID 7280025) which serves a retirement community and a limited number of nearby residences. The Village System operates with only a single well source which does not comply with the Department's standards for redundant sources. This puts customers at risk of lapses in service if there are any problems with the well.

APPLICANT NAME:	CITY OF LANCASTER - SUSQUEHANNA LARGE DIAMETER TRANSMISSION MAIN	REGION:	III	DEP PROJECT RATING:	40
STREET ADDRESS:	150 PITNEY ROAD	PWSID:	7360058	PROJRANK:	43 of 78
CITY:	LANCASTER	LOAN #	85229	PROJECT COST:	\$49,293,000
COUNTY:	LANCASTER	FUND SOURCE:	DWSRF	PROJECT TYPE:	TRANS
		MTGDATE:	1/21/2026		
PROJ. DESCRIPTION:	The Susquehanna large diameter transmission main project will include the construction of 7,200 linear feet (LF) of raw water transmission main between the Susquehanna Low Service Pump Station and the Susquehanna Water Treatment Plant (WTP) and 28,200 LF of finished water transmission main between the WTP and the Oyster Point Reservoir. All new pipe will be 42-inch diameter, ductile-iron/cement-lined pipe. The new raw and finished mains will parallel the existing raw and finished mains, providing redundancy and making the Susquehanna treatment system more resilient.				
PROB. DESCRIPTION:	The City of Lancaster (City) withdraws about 70 percent of its water from an intake on the Susquehanna River at Columbia, PA. The water is moved from the Susquehanna Low Service Pump Station through a 42-inch diameter raw water transmission main to the Susquehanna Water Treatment Plant (WTP). Finished water from the WTP is moved through another 42-inch diameter water main to the Oyster Point Reservoir. Both the raw and finished water transmission mains are constructed of steel and are about 70-years old. While they are still in serviceable condition, the frequency of leaks and repairs is accelerating, and the City desires redundancy in these critical transmission mains for the Susquehanna system. It would not be feasible for the City to rely on their second WTP, the Conestoga WTP, to supply their entire service area due to water allocation limits on the Conestoga River and the presence of PFOA.

UPDATED JULY 20, 2026

APPLICANT NAME:	READE TOWNSHIP MUNICIPAL AUTHORITY- WELL LINE AND TANK PROJECT	REGION:	V	DEP PROJECT RATING:	40
STREET ADDRESS:	P.O. BOX 153	PWSID:	4110297	PROJRANK:	44 of 78
CITY:	GLASGOW	LOAN #	80322	PROJECT COST:	\$5,021,005
COUNTY:	CAMBRIA	FUND SOURCE:	DWSRF	PROJECT TYPE:	TRAN, WS
		MTGDATE:	4/15/2026		
PROJ. DESCRIPTION:	The Reade Township Municipal Authority (RTMA) is proposing to replace 8,800 linear feet (LF) of existing 10-inch diameter raw waterline along Cambria Mills Rd. Project scope also includes replacing the section of waterline that runs along Sportsman Club Rd. In addition, a new 178,061 gallon glass fused bolted steel storage water tank will be installed at the same location as the existing 189,203 gallon water tank.				
PROB. DESCRIPTION:	RTMA is supplying Glendale Valley Municipal Authority (GVMA) with finished water with sufficient reserve water capacity. RTMA is looking to supply DCNR Glendale Lake Park (Prince Gallitzin State Park) with approximately 45,000 gallons per day in addition to its supplies to GVMA. The source capacity is available but storage in the three existing tanks allows for only 1.5 days capacity on average. RTMA would like to install an additional storage tank to increase their storage to the DEP-recommended storage capacity of three days. The storage capacity concern is related to the raw waterline replacement as well. The existing ductile iron pipe that conveys raw water has had many leaks. The poorly draining acidic soil in the area has been noted to rot out the pipe in several locations.

UPDATED JULY 20, 2026

APPLICANT NAME: FREDERICKSBURG SEWER & WATER AUTHORITY - WTP UPGRADES FOR MANGANESE	REGION: III	DEP PROJECT RATING: 39
STREET ADDRESS: P.O. BOX 161	PWSID: 7380035	PROJRANK: 45 of 78
CITY: FREDERICKSBURG	LOAN # 80331	PROJECT COST: \$11,000,000
COUNTY: LEBANON	FUND SOURCE: DWSRF	PROJECT TYPE: SRC, TRANS, TREAT
	MTGDATE: 7/15/2026	

PROJ. DESCRIPTION: To combat the issue of iron and manganese precipitation in the distribution system, and to reduce their reliance on the interconnection with the City of Lebanon, the Fredericksburg Sewer and Water Authority is proposing the following system improvements: 1. Re-route FSWA's three (3) existing wells (Nos. 2, 5, and 6) to a new, centralized treatment facility to be built at the site of the old, decommissioned wastewater treatment plant. The new facility will have greensand filtration for iron and manganese removal, as well as sodium hypochlorite, ortho-polyphosphate, and fluoride addition systems. 2. Connect two (2) new wells, Nos. 7 and 8, to the centralized treatment facility. The combined transmission line for these wells was previously installed. 3. Discontinue chemical addition at the existing wells. The existing reservoir and distribution pumps for these wells will also be taken out of service. 4. Upgrade Well 6 by extending the wellhead, adding a variable frequency drive, and replacing the motor. 5. Remove existing mixers at the East and West finished water storage tanks and add a new mechanical mixer to the West Tank. 6. Electrical and SCADA upgrades to support the above improvements.

PROB. DESCRIPTION: The Fredericksburg Sewer and Water Authority's (FSWA's) distribution system is prone to iron and manganese precipitation at various locations and under a wide range of environmental conditions. It is believed that the interaction of water from FSWA's own treatment system with water purchased from the City of Lebanon Authority (CoLA) through an interconnection is a cause, since CoLA utilizes chloramination and maintains a higher distribution system pH. FSWA has no choice but to mix their own treated water with CoLA's water because their own sources cannot supply their average daily demand.

COUNTY: BUTLER	FUND SOURCE: DWSRF	PROJECT TYPE: DIST
	MTGDATE: 7/15/2026	
PROJ. DESCRIPTION: The project includes the replacement of approximately 6,000 linear feet of existing waterline with new water main of various diameters, installation of residential water meter pits and meters for all service connections, replacement of fire hydrant assemblies and isolation valves, and installation of associated appurtenances. The existing waterline crossing beneath Buffalo Creek will be replaced. Improvements also include modifications to the lower storage tank valve vault to provide drainage. All disturbed roadway and surface areas will be restored. No facilities are proposed to be decommissioned.		
PROB. DESCRIPTION: The existing water distribution system contains 4-inch cast iron mains that have experienced numerous leaks and do not meet fire flow requirements at hydrants. This limits fire protection and reduces system reliability. The system lacks residential water meters, preventing accurate measurement of usage and identification of water loss. The waterline crossing beneath Buffalo Creek is aging and in poor condition. The valve vault at the lower storage tank lacks drainage, resulting in recurring water accumulation and maintenance issues. No permit exceedances are associated with these conditions.

APPLICANT NAME: WOMELSDORF-ROBESONIA JOINT AUTHORITY - FURNACE TANK REHAB	REGION: III	DEP PROJECT RATING: 38
STREET ADDRESS: 490 LYMAN AVE	PWSID: 3060080	PROJRANK: 49 of 78
CITY: WOMELSDORF	LOAN # 85239	PROJECT COST: \$1,168,821
COUNTY: BERKS	FUND SOURCE: DWSRF	PROJECT TYPE: WS
	MTGDATE: 7/15/2026	
PROJ. DESCRIPTION: The scope of the project consists of abrasive blasting, surface preparation, and painting 23,072 SF of the water storage tank, which includes the interior and exterior surfaces. Additionally, any required metal work and repairs, one new ladder, one new vent, and modification to the overflow pipe are all aspects included in the scope of work.		
PROB. DESCRIPTION: The Furnace Tank in Heidelberg Township is owned and operated by the Womelsdorf-Robeson Joint Authority (WRJA). The 1.5 MGD ground water storage tank is supplied by Well No. 2 and 8 which are also owned and operated by the WRJA, and the tank supplies parts of Heidelberg Township, Millcreek Township, Marion Township, Womelsdorf Brough, and the Robesonia Borough. The total population served within the Womelsdorf-Robeson Joint Authority service area is 7,476, consisting of 2,299 connections. The tank currently features a failing ladder, overflow pipe, and necessity for a new vent, as well as the coating system is diminished leaving the tank exposed and at risk of deterioration and failure. There are currently no permit exceedances or compliance related problems, but should the tank be left as is failure could occur, thus leaving residents without water supply, fire protection, and unintentional discharge to the area surrounding the tank site.

UPDATED JULY 20, 2026

APPLICANT NAME:	SOUTH PYMATUNING TOWNSHIP - BUCKEYE DR, SARANAC DRIVE, AND KATHY LANE WATERLINE EXTENSION	REGION:	VI	DEP PROJECT RATING:	38
STREET ADDRESS:		PWSID:	6430077	PROJRANK:	50 of 78
CITY:		LOAN #	85240	PROJECT COST:	\$1,796,878
COUNTY:	MERCER	FUND SOURCE:	DWSRF	PROJECT TYPE:	DIST
		MTGDATE:	7/15/2026		
PROJ. DESCRIPTION:	The project consists of the installation of new water distribution infrastructure, including 1,095 linear feet of 8- inch waterline along Kathy Lane, 2,445 linear feet of 10-inch waterline along Buckeye Drive, 3,010 linear feet of 12-inch waterline along Saranac Drive, 11 fire hydrants, 69 new service connections, 4-8-inch valves, 7-10-inch valves, 2-10-inch insertion valves, 12-12-inch valves, 4-12-inch insertion valves, and 9 hot tap connections. The project will extend public water service to currently unserved areas and create a looped system configuration to eliminate existing dead ends and improve system hydraulics and reliability.				
PROB. DESCRIPTION:	The project will address deficiencies in the existing water distribution system, including water quality and limited system security in the project area. Existing dead-end mains contribute to water quality degradation due to low circulation, resulting in increased water age, sediment accumulation, and the need for routine flushing to maintain acceptable disinfectant residuals. These conditions increase operational costs and may contribute to potential compliance risks related to disinfection byproducts and residual maintenance. Additionally, the current system configuration lacks adequate system security, making the system more vulnerable to service interruptions during main breaks, maintenance activities, or emergency events. This project will improve water quality and circulation, provide tank redundancy in the distribution system and tank, and extend reliable public water service to residents.

UPDATED JULY 20, 2026

APPLICANT NAME:	ERIE CITY WATER AUTH - WEST 12TH ST. MAINTENANCE FACILITY RENO. & DISTRIBUTION SYS PRO-FI	REGION:	VI	DEP PROJECT RATING:	37
STREET ADDRESS:	340 WEST BAYFRONT PARKWAY	PWSID:	6250028	PROJRANK:	51 of 78
CITY:	ERIE	LOAN #	82258	PROJECT COST:	\$8,000,000
COUNTY:	ERIE	FUND SOURCE:	DWSRF	PROJECT TYPE:	TREAT, DS
		MTGDATE:	4/15/2026		

PROJ. DESCRIPTION: 12TH STREET FACILITY BUILDING IMPROVEMENTS (77% of project cost): The Erie Water Works 240 West 12th Street facility, located at the intersection of West 12th Street and Myrtle Street in the City of Erie, Erie County, PA, houses the Distribution, Meters, and Engineering Departments as well as material inventory and a large portion of the fleet. Much of the facility was originally constructed in the 1930s and the majority of the facility is in need of significant updates. Work will include selective demolition, concrete work, structural steel, roofing, glazing, painting, flooring, install new fire protection system, new domestic water pipes, new gas pipes, utility connections, fixtures, appurtenances, water heater, air compressor, HVAC, panel boards, raceways, conduits, interior lighting, and exterior lighting. CURED-IN-PLACE PIPE (GIPP) LINER PROJECT (12% of project cost): Several important transmission mains throughout the system will be rehabilitated by Cured-In-Place Pipe (GIPP) technology under this project in order to economically extend life, and provide stability for continuous water supply through key parts of the distribution system. Funding may include hydraulic modeling as needed, site evaluations, and design, as well as the physical GIPP work. BIRD DRIVE WATER MAIN REPLACEMENT (11% of project cost): The existing water mains within this project area are 6" cast iron mains from 1920s. Numerous water main breaks have occurred in these areas which interrupt water service to many customers, cause traffic disruptions, and lead to expensive pavement and lawn restoration. The existing mains will be replaced with approximately 1,500 feet of new ductile iron pipe. Fire hydrants and service lines will also be replaced.

PROB. DESCRIPTION: This proposed Pro-Fi application includes the following projects. The first (12th Street Facility Building Improvements) is planned to be the lead project: 12th Street Facility Building Improvements - The 12th Street facility houses the Erie Water Works Distribution, Meters, and Engineering Departments as well as material inventory and a large portion of the fleet. Much of the building is in need of upgrades. Cured-In-Place Pipe (GIPP) Liner Project - leaking The large diameter transmission main under railroad tracks in the City of Erie is leaking. There are several other important transmission mains throughout the system that can be rehabilitated by GIPP in order to economically extend life, and provide stability for continuous water supply through key parts of the distribution system. Bird Drive Water Main Replacement - The existing cast iron water mains are significantly aged and well past their useful life. These water mains were prioritized using the KLH Master Plan as well as EWW analysis of historical data of the frequency of main breaks per section of water main of equivalent age and material.

UPDATED JULY 20, 2026

APPLICANT NAME: AQUA PENNSYLVANIA, INC. - RIDLEY PFAS PROJECT PWSID PA1460073	REGION: I	DEP PROJECT RATING: 36
STREET ADDRESS: 762 LANCASTER AVE.	PWSID: 1460073	PROJRANK: 52 of 78
CITY: BRYN MAWR	LOAN # 80314	PROJECT COST: \$35,000,000
COUNTY: MONTGOMERY	FUND SOURCE: DWSRF	PROJECT TYPE: TREAT, PFAS
	MTGDATE: 10/15/2025	

PROJ. DESCRIPTION: PFAS treatment will be installed on the existing WTP campus and be sized to maintain the permitted 8.0 MGD plant capacity, with a maximum design capacity of 9.0 MGD. The PFAS treatment will involve the usage of granular activated carbon (GAC) in trains of dual (i.e., lead-lag formation) vessels to adsorb the PFAS compounds. The vessels will be housed in a new brick building and include a new electrical room for pump starters and variable frequency drives (VFDs), HVAC, and lighting. The project also includes a low lift pump station with four (4) vertical turbine pumps (VTPs) to push water through the GAC vessels and a 100,000-gal waste equalization tank with two (2) submersible transfer pumps to facilitate GAC rinses and backwashes. Details of the proposed PFAS treatment system implementation at the RWTP includes the improvements to the plant will consist of the demolition of an existing decommissioned treatment building and the construction of a new building (approximately 7,600 square feet) to house GAC treatment vessels, as well as associated site piping and underground storage chambers for feed water and wastewater to serve the GAC system; Installation of seven (7) trains of 12-foot diameter lead-lag GAC vessels. The 7-train system will allow Aqua to provide adequate treatment for 9.0 MGD with one train out of service. Installation of a 70,000-gallon wet well. The GAC system will be fed from the feed water wet well, which will receive flow via newly installed piping tapped into the existing treatment process downstream of the gravity filters. The wet well will contain four (4) submersible feed water pumps. Installation of a 100,000-gallon equalization tank. The design includes this waste holding tank for initial start-up waste and operational backwash for two vessels, as well as sludge discharge from the existing treatment process that is currently conveyed by force main from a pump station wet well to the thickeners. This tank will include two (2) submersible waste pumps. Backwash water for the GAC vessels will be supplied by the distribution system. Backwash wastewater will discharge from the waste holding tank to the existing wastewater treatment process on site. The existing chemical application points will be relocated after the GAC treatment, in a new chamber located upstream of the existing clearwell.

PROB. DESCRIPTION: Aqua Pennsylvania Inc. (Aqua PA) serves municipalities throughout southeastern Pennsylvania. The Ridley Water Treatment Plant (RWTP) is owned and operated by Aqua PA and is located at 1200 East Baltimore Pike in Media, Delaware County. The RWTP is a surface water treatment plant that draws from two raw water sources. Up to 3.0 million gallons per day (MGD) is taken from Ridley Creek and up to 6.0 MGD is taken from Chester Creek. The RWTP produces up to 8.0 MGD and allocation is set at 9.0 MGD. Over the period of 2015 to 2020, the average flow split between the two raw water sources was 57% Ridley Creek and 43% Chester Creek. Both the Ridley Creek and Chester Creek raw water sources have detectable levels of perfluoroalkyl substances (PFAS) with the Chester Creek source having higher levels of contamination. Samples of water collected at the RWTP entry point (EP 138) have been analyzed for perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS). Analytical results indicate running annual average of 7.5 ppt for PFOA and 2.7 ppt for PFOS detections in at this entry point. The results for the past five quarters of monitoring have not exceeded the Pennsylvania Maximum Contaminant Level (MCL) for these two compounds.

BUSINESS CASE: N/A		GREEN AMOUNT: \$0	
APPLICANT NAME: BEDFORD TOWNSHIP MUNICIPAL AUTHORITY- WATER SYSTEM IMPROVEMENTS PROJECT		REGION: III	DEP PROJECT RATING: 36
STREET ADDRESS: P.O. Box 371		PWSID: 4050037	PROJRANK: 53 of 78
CITY: BEDFORD		LOAN # 85232	PROJECT COST: \$5,033,000
COUNTY: BEDFORD		FUND SOURCE: DWSRF	PROJECT TYPE: TREAT, SRS, DS
		MTGDATE: 4/15/2026	
PROJ. DESCRIPTION: The Bedford Township Municipal Authority (BTMA) project includes construction of the Bedford Springs Well No. 2 and replacement of approximately 11,900 LF of existing 4-inch through 12-inch diameter water mains. Development of the new well includes 1,350 LF of transmission main between the new well and the existing Bedford Springs treatment facility, a new metering vault to serve both wells, and the addition of an AQUAMAG (corrosion control) injection system at the treatment facility. The corrosion control system is a necessary upgrade as both Wells 1 and 2 have low alkalinity. The project also includes replacing eight fire hydrants, 34 gate valves, service lines, and appurtenances. The water main is located north of the Borough of Bedford, between U.S. Route 220-BUS and the Raystown Branch of the Juniata River.			
PROB. DESCRIPTION: BTMA's system is divided into the Northern and Southern Services Areas and there is no connection between the two; the area in the middle is served by the Municipal Authority of the Borough of Bedford (MABB) and is bordered on the east and west sides by mountainous terrain. While the BTMA's Northern Service Area has redundancy provided by four (4) wells, the Southern Service Area is only supplied by the Bedford Springs Well No. 1. If there is a problem with the single well, BTMA has no options other than purchasing water from MABB through an interconnection, which is not cost-effective. The new Bedford Springs Well No. 2 will provide source redundancy for BTMA's Southern Service Area and ensure that a sufficient quality and quantity of water can be provided to users at a reasonable cost. The project will include an additional watermain replacement in the Northern Service Area where the existing pipe is either low-strength PVC or cast iron which is between 50 and 70 years old. This piping is increasingly prone to leaks and breaks which are costly to repair and can interrupt service to the mix of commercial, industrial, and residential users who are connected to the main. The condition of the existing main makes replacement necessary to continue serving this area.

APPLICANT NAME: EAST TAYLOR MUNICIPAL AUTHORITY - 2" WATERLINE REPLACEMENT PROJECT	REGION: V	DEP PROJECT RATING: 36
STREET ADDRESS: 403 DONRUTH LANE	PWSID: 4110043	PROJRANK: 54 of 78
CITY: CONEMAUGH	LOAN # 80296	PROJECT COST: \$9,920,350
COUNTY: CAMBRIA	FUND SOURCE: DWSRF	PROJECT TYPE: DS
	MTGDATE: 7/16/2025	

PROJ. DESCRIPTION: The proposed project includes the installation of 22,000 linear feet of new 2-inch diameter plastic water main distribution piping. New customer water service lateral piping and meter pits are also proposed as part of the project. The existing water distribution system would be abandoned in place, disconnected, and will no longer be utilized for water distribution. New water service installation will occur at all homes that were disconnected from the existing water system within the project area. New water laterals are proposed from the new main line to the customers' property line. The new water main line and services will be installed at a minimum depth of 4 feet to the top of the pipe ensuring freeze protection.

PROB. DESCRIPTION: The existing water distribution infrastructure within the proposed project area was largely installed throughout the 1900's and is significantly past its effective design life. Due to the change in water quality requirements for this public water system, the ability of the Authority to provide water to its customers that meets the current standards has become the primary focus of the Authority. The existing cast iron pipes within the system degrade the chlorine residuals in the water to levels near the minimum requirement. This means that the authority must flush the system regularly, resulting an increase in the water that must be purchased. By reducing the amount of water wasted through flushing, the Authority can minimize the cost passed onto its customers, while still providing quality water. In addition, various leaks in the existing piping contribute to ongoing water loss.

COUNTY: BLAIR	FUND SOURCE: DWSRF	PROJECT TYPE: TRANS, TREAT, WS,
	MTGDATE: 7/15/2026	

PROJ. DESCRIPTION: The project will address these problems in the following ways: 1. A new 300,000-gallon spheroid elevated steel finished water storage tank is proposed near the Altoona-Blair County Airport to increase distribution system pressures and fire flows in the southeast end of the distribution system. The new tank will also provide redundancy with the existing 1.0-MG Lock Mountain Tank. 2. The Lock Mountain Tank will be rehabilitated to extend its service life, including blast cleaning and repainting of the interior and exterior. 3. 700-ft of existing, deteriorated 4-inch cast iron water main pipe in East Christiana Street will be replaced with 6-inch PVC pipe to match existing adjacent pipe. 4. A granular activated carbon (GAC) system for PFAS removal will be installed at the Authority's water treatment plant (WTP) located at 520 Butternut St, Martinsburg, PA 16662. The GAC system will be housed in a new building to the west of the existing building. All four (4) of the Authority's wells will be rerouted so that they enter the new GAC treatment building. Three (3) of the wells are in the vicinity of the WTP and will require little rerouting, but the Herschberger well is further away and a 4,000-ft transmission main will be required to get water from the well to the WTP. This project will provide a centralized treatment system to remove PFAS from all of the Authority's wells and simplify operations by consolidating all treatment to one location.

PROB. DESCRIPTION: The Martinsburg Municipal Authority has proposed a multi-component project that addresses the following problems: 1. Low distribution system pressures in the area of the Altoona-Blair County Airport located southeast of Martinsburg Borough. This area is furthest from the Authority's only existing finished water storage tank, which is the 1.0-MG Lock Mountain Tank located northwest of Martinsburg Borough. 2. The need for rehabilitation of the Lock Mountain finished water storage tank. 3. Deteriorating water main pipes in East Christiana Street. 4. The presence of per- and polyfluoroalkyl substances (collectively referred to as "PFAS") in all four (4) of the Authority's groundwater wells, especially the presence of Perfluorooctane sulfonate (PFOS) in the Herschberger well at levels above the proposed EPA Maximum Contaminant Level (MCL) of 4 parts per trillion (ppt).

COUNTY:	BUCKS	FUND SOURCE:	DWSRF	PROJECT TYPE:	DS
		MTGDATE:	1/21/2026		
PROJ. DESCRIPTION:	Upper Southampton Municipal Authority (USMA) intends to replace approximately 6,800 linear feet (LF) of existing 8-inch cast iron water main with 8-inch PVC pipe on Maple Avenue (SR 2016) from Street Road (SR 0132) to Second Street (SR 0232). This project will encompass 12 intersections, 95 water service connections, 5 fire hydrants, and 12 ADA compliant ramps. The road falls under PENNDOT jurisdiction, and restoration will be full wide macadam overlay.				
PROB. DESCRIPTION:	The Maple Avenue water main replacement project, located within the Upper Southampton Municipal Authority system (PWSID 1090063), is a critical infrastructure initiative aimed at enhancing service reliability and water quality for customers. The existing water main has experienced frequent breaks in recent years, resulting in service disruptions and increased maintenance costs. Replacing this aging infrastructure will significantly improve system performance and reduce long-term operational costs. In addition, the project will ensure that ADA-compliant curb ramps, within the scope of the water main work, are brought up to current code standards, supporting accessibility and regulatory compliance.

APPLICANT NAME: BUCKINGHAM TOWNSHIP - WELL F-8 PFAS REMOVAL			REGION: I	DEP PROJECT RATING: 35
STREET ADDRESS: PO BOX 413			PWSID: 1090159	PROJRANK: 58 of 78
CITY: BUCKINGHAM			LOAN # 81139	PROJECT COST: \$2,077,000
COUNTY: BUCKS			FUND SOURCE: DWSRF	PROJECT TYPE: PFAS, TREAT
			MTGDATE: 1/21/2026	
PROJ. DESCRIPTION: The existing treatment system for Well F8 consists of a pre-filtration system, disinfection by UV and chlorination systems, and booster pumps within a treatment control building, as well as an 88,000-gallon on-site storage tank (day tank). The existing well treatment system will remain in place without modification. There is an existing pole barn, at the site and in proximity to the control building, that will be demolished to serve as the site for a new building to house the proposed PFAS treatment system. The proposed treatment system will consist of one train of granular activated carbon (GAC) filters for removal of PFAS. The GAC filters are to be backwashed into a new holding tank, with a volume of approximately 18,000 to 19,000 gallons, which will be built adjacent to the new PFAS treatment building. The backwash holding tank will discharge into the sewer system via the wet well of the Buckingham Village Wastewater Treatment Plant (WWTP). Well F8 had originally served as the exclusive non-potable water supply for the township-owned Buckingham Village WWTP.				
PROB. DESCRIPTION: Sources of drinking water supply in the Buckingham Township Furlong System (PWSID#1090159), referenced herein as Buckingham, include six active wells (Wells F1, F2, F3, F4,F5, and F8), two abandoned wells (Well F7 and F9), and one well (Well F6) in reserve status. The system has been monitoring perfluoroalkyl substances (PFAS) in its water supply in 2024 and 2025. Samples of water collected at Entry Point (EP) 104 for Well F8 have been analyzed for perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS) and indicate elevated levels of PFAS. Averaged results from samples taken over five quarters of monitoring are as follows: 2.39 ng/L for PFOA and 6.6 ng/L for PFOS.

COUNTY:	CHESTER	FUND SOURCE:	DWSRF	PROJECT TYPE:	PFAS
		MTGDATE:	7/15/2026		
PROJ. DESCRIPTION:	The proposed project includes construction of a new treatment facility building at the Embreeville water storage tank site on Strasburg Road for combined well treatment for Entry Point 105. This building will house the PFAS treatment facilities and on-site sodium hypochlorite (OSG) generation system. PFAS treatment will consist of one train of anion exchange (AIX) with pre-filtration. The corrosion control chemical feed system will be replaced, an on-site generator will be provided, and both well pumps will receive VFD upgrades.				
PROB. DESCRIPTION:	The Embreeville Well Station in the Aqua Spring Run public water system is supplied by two groundwater sources: Embreeville Well 1R and Well 2. Water samples collected at Entry Point 105 for Embreeville Wells 1R and 2 exhibited elevated PFOA levels in 2024 as follows: 3.0 ng/L (average) and 3.1 ng/L (maximum). The stated goal of the proposed project to install PFAS treatment at the well station is to comply with the EPA MCLs.

APPLICANT NAME: BOROUGH OF STONEBORO - DRINKING WATER SOURCE REHABILITATION AND EXPANSION ADVANCE FUNDING	REGION: VI	DEP PROJECT RATING: 33
STREET ADDRESS: 59 LAKE STREET	PWSID: 6430056	PROJRANK: 60 of 78
CITY: STONEBORO	LOAN # 12840	PROJECT COST: \$500,000
COUNTY: MERCER	FUND SOURCE: STATE BYPASS	PROJECT TYPE: SRC
	MTGDATE: 7/15/2026	

PROJ. DESCRIPTION: The Borough desires to install two new groundwater source wells to fully supply the public drinking water system. Ideally, the springs are left online and continued for use while they are producing. The two new wells represent water security. We propose to directionally drill a new supply line from a point near the springs to a point near the water booster station, a distance of approximately 11,000 LF. Also, water security. There are loops that can be completed to improve water quality for the system users. There are also long dead-end lines that radiate out from the center of the Borough that could use automated flushing hydrants, also to improve water quality for the residents on these line segments. This represents a water quality improvement. Replacing valves and hydrants are public safety and operational improvements.

PROB. DESCRIPTION: The existing public water system is supplied by several springs. The Borough has maintained a backup well to provide make up water for the system when the springs are not meeting the consumption needs. The Borough has never liked the quality of the backup well water. The springs often are not meeting the supply requirements. The line from the springs to the users in the Borough has been band-aided multiple times over the years and is in need of replacement. Advance funding is to explore all possible situations such as - there may be multiple dead ends in the Borough that need addressed for water quality improvement, valves in the system that are failed and need replaced, and may be hydrants on the system that are aged and need replaced. The need has been noted, but the Borough has not confirmed yet will confirm after the formal study is complete.

UPDATED JULY 20, 2026

APPLICANT NAME: AQUA PENNSYLVANIA, INC. - OAK HILL WELL PFAS REMOVAL PROJECT PWSID PA2400095	REGION: II	DEP PROJECT RATING: 33
STREET ADDRESS: 1120 S WASHINGTON AVE	PWSID: 2400095	PROJRANK: 61 of 78
CITY: SCRANTON	LOAN # 80337	PROJECT COST: \$4,730,000
COUNTY: LUZERNE	FUND SOURCE: DWSRF	PROJECT TYPE: TREAT, PFAS
	MTGDATE: 7/15/2026	

PROJ. DESCRIPTION: The Oak Hill water system, operated by Aqua Pennsylvania, Inc., serves approximately 158 residential customers in Lehman Township, Luzerne County. Sampling results from the Oak Hill wells have identified the presence of PFAS compounds that must be addressed to ensure long-term compliance with federal drinking water standards. Aqua Pennsylvania is committed to ensuring the safety and quality of community drinking water. The purpose of this project is to minimize the presence of PFAS compounds, specifically PFOA and PFOS, in finished drinking water through treatment of the existing Oak Hill well sources. Implementation of the proposed treatment system will allow the Oak Hill system to comply with current and future regulatory requirements while continuing to provide safe and reliable drinking water to system customers. The maximum PFOA level that was measured is 4.1 ppt and the maximum PFOS level that was measured is 4.8 ppt.

PROB. DESCRIPTION: The proposed project consists of the design and construction of a PFAS treatment facility to serve the Oak Hill water system in Lehman Township, Luzerne County. A new treatment facility will be constructed at the site of Oak Hill Well No. 3. Both existing wells can pump 36 gallons per minute (gpm), but only ever run one at a time due to permit restrictions, and will convey water to a common treatment system where flows will be combined and treated prior to entering the distribution system as a single entry point. The project will include installation of ion exchange (IX) treatment units designed to remove PFAS compounds, including PFOA and PFOS, from the groundwater supply. The ion exchange system will adsorb PFAS compounds prior to distribution to customers. Additional improvements will include installation of new chemical feed systems and a contact main designed to provide four-log disinfection for the combined well flows. Associated piping, valves, instrumentation, and site improvements necessary to support the treatment process will also be installed as part of the project. The proposed improvements will ensure the Oak Hill system remains compliant with federal PFAS drinking water standards while maintaining reliable service to approximately 158 residential customers.

		MTGDATE:	7/15/2026		
PROJ. DESCRIPTION:	A new PFAS treatment building will be constructed at the Silver Spring Water Treatment Plant within the confines of the existing property. Treatment will be provided by 12 granular activated carbon (GAC) vessels arranged in six (6) parallel trains of two (2) vessels, with each train having one lead and one lag vessel. Other plant upgrades necessary to support the new GAC vessels include a new post-filtration transfer wet well and pumps, upgraded backwash supply pumps, and SCADA system improvements. Backwash water can be handled by the plant's existing wastewater clarifier and lagoons.				
PROB. DESCRIPTION:	The Pennsylvania-American Water Company withdraws water from the Conodoguinet Creek in Silver Spring Township, Cumberland County for use in their Mechanicsburg District water system (PWSID 7210029). Surface water is treated at the Silver Spring Water Treatment Plant. Testing from 2019 through 2023 has revealed the presence of per- and polyfluoroalkyl substances (collectively referred to as "PFAS") in the creek. The maximum Perfluorooctanoic Acid (PFOA) concentration was 4.8-ppt and the maximum Perfluorooctanesulfonate (PFOS) concentration was 9.4-ppt. Both of these values exceed the EPA Maximum Contaminant Levels (MCL's) of 4.0-ppt but not the respective Pennsylvania MCL's of 14 and 18-ppt.

AMENDED FEDERAL FY2026 - PROJECT PRIORITY LIST

UPDATED JULY 20, 2026

APPLICANT NAME:	PENNSYLVANIA AMERICAN WATER COMPANY MAPLE LAKE DAM REHABILITATION	REGION:	II	DEP PROJECT RATING:	31
STREET ADDRESS:	39 PUBLIC SQUARE	PWSID:	2409010	PROJRANK:	70 of 78
CITY:	WILKES-BARRE	LOAN #	80294	PROJECT COST:	\$7,370,000
COUNTY:	LACKAWANNA	FUND SOURCE:	DWSRF	PROJECT TYPE:	DAM
		MTGDATE:	7/16/2025		

PROJ. DESCRIPTION: The proposed Maple Lake Dam Rehabilitation project will upgrade the Maple Lake Dam structure to bring it into compliance with current dam safety practices. The project includes upgrading the outlet works to modern design standards and increasing the capacity of the spillway to convey the probable maximum flood consisting of a 2-stage labyrinth weir. In addition, a seepage collection system will be installed in the embankment of the dam. The embankment will be flattened to increase the overall stability of the structure, and a filter diaphragm will be installed around the concrete culvert that protrudes through the embankment. The outlet works system will include a 30-inch diameter ductile iron pipe that will bypass the weir and be to the left of the spillway training wall. The pipe will be controlled by an unseated self-contained stainless steel slide gate at the downstream end of the pipe and the upstream end of the pipe will be fitted with a trash rack.

PROB. DESCRIPTION: The Maple Lake Dam's current spillway can only pass a flow of 76 percent of the probable maximum flood event. There is risk of failure due to the lack of a filter diaphragm. There was also seepage noted through the embankment of the dam.

APPLICANT NAME:	PENNSYLVANIA AMERICAN WATER COMPANY MARSHWOOD DAM REHABILITATION	REGION:	II	DEP PROJECT RATING:	31
STREET ADDRESS:	39 PUBLIC SQUARE	PWSID:	2359008	PROJRANK:	71 of 78
CITY:	WILKES BARRE	LOAN #	80295	PROJECT COST:	\$7,326,000
COUNTY:	LACKAWANNA	FUND SOURCE:	DWSRF	PROJECT TYPE:	DAM
		MTGDATE:	7/16/2025		

PROJ. DESCRIPTION: The proposed Marshwood Dam Rehabilitation project will upgrade the Marshwood Dam structure bringing it into compliance with current dam safety practices. The project includes upgrading the outlet works to modern design standards and increasing the capacity of the spillway to convey the probable maximum flood. A two stage labyrinth weir will be installed. In addition, a seepage collection system will be installed in the embankment of the dam. The embankment will be flattened to increase the overall stability of the dam. The outlet works system will include a 30-inch diameter ductile iron pipe that will bypass the weir and be to the right of the spillway training wall. The pipe will be controlled by an unseated self-contained stainless steel slide gate at the downstream end of the pipe and the upstream end of the pipe will be fitted with a trash rack.

PROB. DESCRIPTION: The Marshwood Dam's current spillway can only pass a flow of 55 percent of the probable maximum flood event. There is risk for a failure due to the material piping from the lack of a filter diaphragm. There was also seepage noted through the embankment of the dam.

APPLICANT NAME: MUNICIPAL AUTHORITY OF BUFFALO TOWNSHIP - WATER TREATMENT PLANT EXPANSION	REGION: VI	DEP PROJECT RATING: 25
STREET ADDRESS: 707 SOUTH PIKE ROAD	PWSID: 5030019	PROJRANK: 72 of 78
CITY: SARVER	LOAN # 85228	PROJECT COST: \$8,957,546
COUNTY: ARMSTRONG	FUND SOURCE: DWSRF	PROJECT TYPE: TREAT
	MTGDATE: 1/21/2026	
PROJ. DESCRIPTION: The Municipal Authority of Buffalo Township is proposing a water treatment plant expansion project which will consist of adding additional influent and effluent pumps, one additional treatment basin, a membrane filtration skid, a new clearwell tank, and a second clarifier.		
PROB. DESCRIPTION: The Municipal Authority needs to expand their Freeport Water Treatment Plant to meet the current increase in demand for their service area. The current treatment plant can produce 1.25 million gallons per day (MGD). Recently the Authority received a new water allocation permit for 2.0 MG per day. The current expansion project will allow the Authority to produce up to 2.5 MG per day if needed.

APPLICANT NAME: KLINE TOWNSHIP MUNICIPAL AUTHORITY - 2026 WATER PROJECTS	REGION: II	DEP PROJECT RATING: 23
STREET ADDRESS: 1110 SOUTH CHURCH STREET	PWSID: 3540014	PROJRANK: 73 of 78
CITY: HAZLETON	LOAN # 85233	PROJECT COST: \$6,670,000
COUNTY: CARBON	FUND SOURCE: DWSRF	PROJECT TYPE: DS
	MTGDATE: 4/15/2026	
PROJ. DESCRIPTION: The Hancock Street project will replace approx. 2,500 LF of water main with 8-inch and include fire hydrant replacement and service line replacements. The Fire Loop project will replace approx. 4,100 LF water main with 8-inch and addition of fire hydrants and replacement of water service lines. The Tank Rehab project will repaint the existing tank.		
PROB. DESCRIPTION: The project will replace old and outdated water mains on Hancock Street. The Tresckow Fire loop project will replace cast iron pipe with leaded joints that has extreme tuberculation to improve fire suppression. And the water tank will be repainted as the current paint is old and peeling.

STREET ADDRESS:	39 PUBLIC SQUARE	PWSID:	2359008	PROJRANK:	74 of 78
CITY:	WILKES BARRE	LOAN #	85234	PROJECT COST:	\$16,922,000
COUNTY:	LACKAWANNA	FUND SOURCE:	DWSRF	PROJECT TYPE:	DAM
		MTGDATE:	4/15/2026		
PROJ. DESCRIPTION:	The Griffin Dam rehabilitation project includes upgrading the outlet works to meet modern design standards, increasing capacity of the principal spillway, completing a seepage collection system, installing a filter diaphragm around the concrete culvert, and other related work.				
PROB. DESCRIPTION:	In May 2010, the Department prepared a document for the Pennsylvania American Water Company (PAWC) that categorized all high hazard dams in PAWC's inventory as "safe" or "unsafe" based on Pennsylvania's Risk Management Tool for the Assessment of Dams. The existing spillway system is undersized for flood control and therefore, it is categorized as "unsafe." Also, misalignment issues exist along the downstream slope's existing concrete retaining walls and outlet. Finally, seepage issues have been experienced along the dam in the past.

APPLICANT NAME:	CITY OF PHILADELPHIA 2026 PART 1	REGION:	I	DEP PROJECT RATING:	0
STREET ADDRESS:	1101 MARKET STREET	PWSID:	1510001	PROJRANK:	75 of 78
CITY:	PHILADELPHIA	LOAN #		PROJECT COST:	\$9,975,000
COUNTY:	PHILADELPHIA	FUND SOURCE:	APPLICATION PENDING	PROJECT TYPE:	LSL
		MTGDATE:			

PROJ. DESCRIPTION: This project includes the replacement of approximately 950 residential private lead lines within the City of Philadelphia. This project will remove and replace lead and galvanized steel drinking water service lines with new copper service lines. This project will be a replacement of in-kind equipment of existing lead service lines within the PWD service area. No new buildings or structures will be constructed, and the existing building structures at each service line replacement site will not be modified. The replacement will include restoration, customer outreach pre- and post-replacement, additional communications and outreach, and additional tap sampling.

PROB. DESCRIPTION: Project will help eliminate lead from the water supply and improve the situation for renters – many of whom are in lower socio-economic groups, on fixed or single-family incomes, and/or with children or elderly populations requiring assistance. This project directly increases public awareness of the risks and sources of lead exposure to all individuals but particularly to low income, vulnerable, and sensitive populations.
