# Commonwealth of Pennsylvania Public Health Advisory Fish Consumption

#### HEALTH BENEFITS OF EATING FISH

Fish are nutritious and good to eat. Fish are low in fat, high in protein and provide substantial human health benefits. Fish provide valuable vitamins and minerals and beneficial oils that are low in saturated fat. Omega-3 fatty acids found in fish are also beneficial, particularly in terms of cardiovascular health. The United States Food and Drug Administration (FDA) recommends that consumers eat a balanced diet, choosing a variety of foods including fruits and vegetables, foods that are low in trans fat and saturated fat, as well as foods rich in high fiber grains and nutrients. A diet that includes a variety of fish and shellfish can be an important part of a balanced healthy diet. The United States FDA, EPA, the American Heart Association and other nutrition experts recommend eating two meals (12 oz.) of fish per week. By following these advisories, you should feel comfortable making one of those meals (up to 8 oz.) a recreationally caught Pennsylvania sport fish.

#### CONTAMINANTS IN FISH

While most recreationally caught sport fish in Pennsylvania are safe to eat, chemicals, such as mercury and PCBs, have been found in some fish from certain waters. While the levels of unavoidable chemical contaminants are usually low, there can be potential health concerns to pregnant and breast-feeding women, women of childbearing age, children, and individuals whose diet consists of a high percentage of fish.

Long lasting contaminants, such as PCBs, chlordane, and mercury, build up in your body over time. It may take months or years of regularly eating contaminated fish to build up amounts that are a health concern. Health problems that may result from the contaminants found in fish range from small changes in health that are hard to detect to birth defects and cancer. Mothers who eat highly contaminated fish for many years before becoming pregnant may have children who are slower to develop and learn. The meal advice in this advisory is intended to protect children from these potential developmental problems. Adults are less likely to have health problems at the low levels that affect children. If you follow this advisory over your lifetime, you will minimize your exposure and reduce health risks associated with contaminants in fish

# INTRODUCTION TO FISH CONSUMPTION ADVISORIES

We are not recommending that you stop eating sport caught fish, except where "Do Not Eat" is shown. When properly prepared, eating fish regularly offers important health benefits as a good choice to replace high fat foods. You will gain benefits if you follow the sport fish consumption advisory carefully to: choose safer places to fish, pick safer species to eat, trim and cook your catch correctly, and follow the recommended meal frequencies. Using this advice, you will reduce your exposure to possible contaminants.

Consumption advisories provide guidance to individuals or segments of the population who are at greater risk from exposure to contaminants in fish. Advisories are not regulatory standards but recommendations intended to provide additional information to high-risk groups. These advisories apply only to recreationally caught sport fish in Pennsylvania, not commercial fish. The FDA establishes the legal standards for contaminants in food sold commercially, including fish.

### STATEWIDE ADVISORY

Pennsylvania has issued a general, statewide health advisory for recreationally caught sport fish: eat no more than one meal (½ pound) per week of sport fish caught in the state's waterways. This general advice was issued to protect against eating large amounts of fish that have not been tested or that may contain unidentified contaminants.

#### HOW TO USE THIS ADVISORY

Follow the general, statewide one meal per week advisory to limit your exposure to contaminants. To determine if more protective advice applies to the fish you have caught, find the locations and species of fish you've caught in the tables that follow. Find the meal advice for the fish you've caught. "Do Not Eat" means no one should eat those fish because of high contamination. The other groups are advice for how often to eat a fish meal.

One meal is assumed to be ½ pound of fish (8 oz. before cooking) for a 150-pound person. The meal advice is equally protective for larger people who eat larger meals and smaller people who eat smaller meals.

People who regularly eat sport fish, women of child-bearing age and children are particularly susceptible to contaminants that build up over time. If you fall into one of these categories, you should be careful to space fish meals out according to the advisory tables that follow. Your body can get rid of some contaminants over time. Spacing the meals out helps prevent the contaminants from building up to harmful levels in the body. For example, if the fish you eat is in the one meal a month group, wait a month before eating another meal of fish from any restricted category.

Women beyond their childbearing years and men generally face fewer health risks from these contaminants. However, it is recommended that you also follow the advisory to reduce your total exposure to contaminants. For these groups, it is the total number of meals that you eat during the year that becomes important and many of those meals can be eaten during a few months of the year. If most of the fish you eat are from the one meal a month category, you should not exceed 12 meals per year.

Sometimes, anglers catch fish with external growths, sores or other lesions. Such abnormalities generally result from viral or bacterial infections and may occasionally be caused by exposure to certain chemical contaminants. The appearance of viral or bacterial infections in fish may be unsightly, but there is no evidence to suggest that these infections pose a threat to consumers of these fish. Whether or not to eat such fish is a matter of personal choice.

## CLEANING AND COOKING YOUR FISH

PCBs and most other organic contaminants usually build up in a fish's fat deposits and just underneath the skin. By removing the skin and fat before cooking, you can reduce the levels of these chemicals. Mercury, however, collects in the fish's muscle and cannot be reduced by cleaning and cooking methods. To reduce PCBs and other organics:

- Remove all skin.
- Slice off fat belly meat along the bottom of the fish.
- Cut away any fat above the fish's backbone.
- Cut away the V-shaped wedge of fat along the lateral line on each side of the fish.
- Bake or broil trimmed fish on a rack or grill, so some of the remaining fat drips away.
- Discard any drippings. Do not eat them or use them for cooking other foods or in preparing other sauces.

  IMPORTANT: You must follow these cleaning and cooking the cooking of the co

ing directions. The meal advice is for eating skinned and trimmed fish.

Also, remember that larger and older fish tend to collect more contaminants, and fatty fish (such as Channel Catfish, carp and eels) tend to collect PCBs and other organic chemicals. Therefore, eating smaller, younger fish and avoiding fatty species can help limit your exposure. Your exposure depends not only on levels in the fish but the amount of fish you eat. The consumption of any fish from contaminated waters is a matter of personal choice.

#### For most recent advisories:

dep.pa.gov/Business/Water/CleanWater/ WaterQuality/FishConsumptionAdvisory/Pages/ default.aspx

Trout stocked from Pennsylvania Fish and Boat Commission state fish hatcheries are subject to the blanket one-meal-per-week consumption advisory that applies to recreationally caught sport fish in Pennsylvania.

Snapping Turtle Consumption Advice: Snapping Turtle meat has been found to contain only small amounts of PCBs and is safe to eat without restrictions. Snapping Turtles do retain PCBs in their fat and internal organs. If you choose to eat Snapping Turtles, you can reduce your exposure by carefully trimming away all fat and internal organs and discarding them before cooking the meat or making soup.

### FOR ADDITIONAL INFORMATION

The advisory listing was current at the time this summary went to press. Fish consumption advisories may have been issued or lifted since that time. Notice of such actions has been released to the public through press releases or can be found online.

## **POTOMAC RIVER BASIN**

There are currently no advisories for the Potomac River Basin.

However, the statewide advisory of 1 meal/week does apply to all waters throughout the Commonwealth including the Potomac River Basin.

# Recognizing and Reporting POLLUTION or DISTURBANCE of Waterways

**POLLUTION or DISTURBANCE** of any waterway or watershed is a serious violation of the Pennsylvania Fish and Boat Code that must be recognized and reported to a Pennsylvania Fish and Boat Commission region law enforcement office. The law provides for criminal penalties for pollution or disturbances.

**POLLUTION** is an introduction into any waterway of anything that "might" harm or kill fish. Examples of "pollutants" are: electricity, explosives, sediment runoff, sewage, insecticides, poisons, high volumes of extremely hot water, liquid concrete or cement, paint, chemicals, petroleum products like gasoline or oil, brine runoff from gas or water

well drilling, and manufacturing waste. Common pollution indicators are: dead fish including crayfish, frogs, and any other types of aquatic life; strange odors like manure, sewage, or chemicals; muddy, cloudy, or discolored water; shiny, oily sheen on water's surface; foamy material floating on the surface; and extremely muddy water.

**DISTURBANCE** of waterways or watersheds includes any alteration of a waterway, its banks, bed or fish habitat that "might" cause damage to or kill fish. Common disturbance indicators are: removal of gravel from stream beds; earth-moving in or along a waterway; dragging logs across stream banks and through stream beds; installing

pipes or culverts; building or installing bridges; making roadways through or along a stream; draining a waterway, wetland, or watershed; or changing the channel flow of a waterway. Various types of permits are required for any such work.

If you see anything suspected to be a pollution or disturbance of any waterway, regardless of how seemingly insignificant, report it immediately by calling the local Pennsylvania Fish and Boat Commission region law enforcement office listed on *page 3* of this publication or the Pennsylvania Department of Environmental Protection at 1-800-541-2050 (24 hours a day, 7 days a week).
