

**OFFICE OF WATER PROGRAMS
BUREAU OF CLEAN WATER
2024 CAUSE REMOVAL REPORT**

Prepared by:

Molly Pulket
Pennsylvania Department of Environmental Protection
Office of Water Programs
Bureau of Clean Water
11th Floor: Rachel Carson State Office Building
Harrisburg, PA 17105

2024

INTRODUCTION

The cause removal process tracks the water quality improvements and impairment cause changes in Pennsylvania waterbodies. Any removal of an impairment cause from categories 4a, 4b, 5, or 5r, whether the waterbody is still impaired or fully restored, must be approved by EPA during the submission of DEP's Integrated Report. Category 4c cause removals do not need EPA approval because these impairments are not due to a pollutant.

Cause removals are tied to the waterbody's protected uses and the specific cause of impairment. DEP conducts assessments regarding four primary protected use categories: Aquatic Life, Recreation, Fish Consumption, and Potable Water Supply. These uses are listed in the Integrated Report listing categories independently of each other. Therefore, a cause removal may move a waterbody from an impaired category to category 1 or 2 for one protected use while leaving the waterbody in an impaired category for a different protected use.

A cause removal may occur for four main reasons:

- 1) All causes of impairment are removed. The waterbody is no longer impaired for that protected use and will move to category 1 or 2.
- 2) Some but not all the causes of impairment are removed. The waterbody is still impaired for that protected use. The waterbody remains in category 4a, 4b, 4c, 5, or 5r.
- 3) An error was discovered in an assessment affecting the cause(s) of impairment. These errors are often due to data entry mistakes. The correction may leave the waterbody as impaired or place it in category 1 or 2. Data are still required to support making these corrections.
- 4) A cause(s) of impairment can be removed when a more appropriate cause choice becomes available for selection in the database. This type of cause removal is given the EPA delisting reason of "Refinement". The waterbody is still impaired for that protected use and for the cause being refined. For the 2024 Integrated Report, the EPA delisting reason of Refinement was only used when:
 - a. Changing the metals cause to the specific metal(s) (i.e., iron, aluminum)
 - b. Changing cause unknown to a specific cause
 - c. Updating the pH cause to pH, low or pH, high
 - d. Updating nutrient or algae to eutrophication
 - e. Specifying the pathogens cause as Escherichia Coli (E. Coli)

CAUSE REMOVAL CATEGORY SUMMARIES

The 2024 Integrated Report includes 31 Aquatic Life Use and 4 Recreational Use stream

assessments with cause removals; this reporting cycle also had 4 Aquatic Life Use lake assessments with cause removals (Tables 1, 2, 4, 5, and 6).

Full Use Restorations

These waterbodies are no longer impaired and therefore supporting their specified use. There were 13 stream assessments that determined the Aquatic Life use was fully restored for those stream segments in the surveyed watershed. There were also 3 Recreational Use stream assessments resulting in a full restoration. Two lakes were fully restored for their Aquatic Life Use.

Cause Removals

These waterbodies are still impaired for the specified use; however, one or more causes of impairment were removed in this reporting cycle. Previous causes of impairment may remain and/or new causes could have been added. There were 10 Aquatic Life Use stream assessments and 2 Aquatic Life Use lake assessments where one or more causes were removed, but the waterbody remained impaired. There were none for Recreational Use this reporting cycle.

Errors

Assessment errors most often occur when creating the assessment and entering data in the assessment database. Historic data entry restrictions are also considered errors once improvements in the database allow for more accurate delineations. When a possible error is found, the historical survey data/reports, knowledge of the watershed, and current data is applied to correctly assess the watershed. Due to discovered errors, 8 Aquatic Life Use stream assessments and 1 Recreational Use stream assessment had impairment cause changes.

Refinements

A cause of impairment can be removed when a more appropriate cause choice is available for selection in the database. These cause removals are referred to as refinements because the waterbody is still impaired for the cause; the name of the cause is simply being changed because a more accurate or descriptive cause name is now available. The reasons a refinement was used for this Integrated Report are detailed in the introduction section above. For the 2024 Integrated Report, streams assessments had 25 Aquatic Life Use and 24 Recreational Use refinements. There was also one Aquatic Life Use refinement on a lake.

CATEGORY 4B WATERBODIES

Waterbodies listed in category 4 are impaired for one or more uses but do not require a TMDL. Category 4b applies when a protected use impairment caused by a point source pollutant is being addressed by the state through a schedule of compliance and other pollution control requirements.

4b Updates

The 2024 Integrated Report contains six 4b actions. These actions can be found in Table 3. All waterbodies covered by these actions are still impaired but are on schedule to be in compliance

within a reasonable timeframe. New data has been collected on some of these waterbodies, as indicated in Table 3, and is under review for future reassessments.

Table 1. Total stream miles for the 4 cause removal categories.

Cause Removal Category	Total Miles
Full Use Restorations	47.8
Cause Removals	34.9
Errors	63.8
Refinements	549.7

Table 2. Total lake acres for the 4 cause removal categories.

Cause Removal Category	Total Acres
Full Use Restorations	642.3
Cause Removals	69.2
Errors	0
Refinements	178.5

Table 3. Category 4b Waterbodies.

DEP Assessment Unit Id	Stream Name	EPA ATTAINS Action Id	Date Expected to Support	Addressed Parameter(s)	Comments
13950	Codorus Creek	3553	2026	Thermal Modifications	The DEP is currently reviewing permits with temperature limits in the Codorus Creek watershed.
15501	Paxton Creek	3554	2032	BOD	The DEP is reviewing a long-term control plan to address the Combined Sewer Overflow (CSO) discharges in the Paxton Creek watershed.
16535	Frankford Creek and Tacony Creek	3555	2036	Organic Enrichment	The DEP has signed a Consent Order & Agreement (CO&A) with the Philadelphia Water Department for a CSO long-term control plan which, in-part, provides for correction of this impairment. Reassessment work started in 2020 and data collection is ongoing for the 2024 IR.
19975	UNT to North Branch Middle Creek	3558	2028	Nutrients, Siltation, Organic Enrichment	Animal Concentration Area (ACA)/ Concentrated Animal Feeding Operations (CAFO) ongoing compliance/enforcement case.
21213	UNT to North Branch Middle Creek	3558	2028	Pathogens	ACA/CAFO ongoing compliance/enforcement case.
20763	Stone Run	3559	2030	Organic Enrichment	Stream impairment due to a CAFO. DEP settled litigation in 2023 and expects to see incremental improvements over the next 7 years.
21967	Sandy Lick Creek	3563	2032	Un-Ionized Ammonia, TSS	Aquatic Life Use (ALU) impairment due to Total Suspended Solids from Wastewater Treatment Plant (WWTP) outfall into Narrows Creek upstream. New data has been collected and is under review.
21969	Narrows Creek	3563	2032	Cause Unknown	ALU impairment for downstream section of Narrows Creek from Municipal Point Source Discharge. Watershed will be targeted for sampling in 2024.

Table 4. Waterbodies that have been fully restored and are now supporting the specified protected use.
