

## WATER QUALITY MANAGEMENT PERMIT

<p>A. PERMITTEE (Name and Address): CLIENT ID#: <b>379283</b></p> <p><b>Gathagan Haley R</b> <b>49 Mcgonigal Lane</b> <b>Woodland, PA 16881-8852</b></p>	<p>B. PROJECT/FACILITY (Name):</p> <p><b>Haley R Gathagan</b></p>	
<p>C. LOCATION (Municipality, County): SITE ID#: <b>528171</b></p> <p><b>Bradford Township, Clearfield County</b></p>		
<p>D. This transfer approves the transfer of sewage facilities consisting of:</p> <p>1,000-gallon septic tank, a dosing pump tank (500 gallon), a 400 square foot free access intermittent sand filter, an erosion tablet chlorinator and a 500-gallon chlorine contact tank.</p>		
<p>Pump Stations: <b>N/A</b></p> <p>Design Capacity: <b>N/A</b> GPM</p>	<p>Manure Storage:</p> <p>Volume: <b>N/A</b> MG</p> <p>Freeboard: <b>N/A</b> inches</p>	<p>Sewage Treatment Facility:</p> <p>Annual Average Flow: <b>0.0004</b> MGD</p> <p>Design Hydraulic Capacity: <b>0.0004</b> MGD</p> <p>Design Organic Capacity: <b>N/A</b> lb/day</p>
<p>E. APPROVAL GRANTED BY THIS PERMIT IS SUBJECT TO THE FOLLOWING:</p> <ol style="list-style-type: none"> <li><b>Transfers:</b> Water Quality Management Permit No. <u>1721401</u> dated <b>August 2, 2021</b> and conditions, supporting documentation and addendums are also made part of this transfer.</li> <li>Permit Conditions for SFTFs are attached and made part of this permit.</li> <li>Special Conditions <b>A and B</b> are attached and made part of this permit.</li> </ol>		
<p>F. THE AUTHORITY GRANTED BY THIS PERMIT IS SUBJECT TO THE FOLLOWING FURTHER QUALIFICATIONS:</p> <ol style="list-style-type: none"> <li>If there is a conflict between the application or its supporting documents and amendments and the attached conditions, the attached conditions shall apply.</li> <li>Failure to comply with the rules and regulations of DEP or with the terms or conditions of this permit shall void the authority given to the permittee by the issuance of this permit.</li> <li>This permit is issued pursuant to the Clean Streams Law Act of June 22, 1937, P.L. 1987, as amended 35 P.S. §691.1 <i>et seq.</i> Issuance of this permit shall not relieve the permittee of any responsibility under any other law.</li> </ol>		
<p>PERMIT TRANSFER DATE:</p> <p><u>February 9, 2024</u></p>	<p>BY: <u>Thomas M. Randis</u></p> <p>TITLE: <b>Thomas M. Randis</b> <b>Clean Water Program Manager</b> <b>Northcentral Regional Office</b></p>	

COMMONWEALTH OF PENNSYLVANIA  
DEPARTMENT OF ENVIRONMENTAL PROTECTION  
BUREAU OF CLEAN WATER

**PERMIT CONDITIONS FOR SFTFs**

**General**

1. The Department of Environmental Protection (DEP) considers the licensed Professional Engineer whose seal is affixed to the design documents to be fully responsible for the adequacy of all aspects of the facility design.
2. The outfall sewer or drain shall be extended to the low water mark of the receiving body of water. Where necessary to ensure proper mixing and waste assimilation, an outfall sewer or drain may be extended with appurtenances below the low water mark and into the bed of a navigable stream provided that the permittee has secured an easement, right-of-way, license or lease from DEP in accordance with Section 15 of the Dam Safety and Encroachments Act, the Act of November 26, 1978, P.L. 1375, as amended.
3. The approval is specifically made contingent on the permittee acquiring all necessary property rights, by easement or otherwise, providing for the satisfactory construction, operation, maintenance and replacement of all sewers or sewerage structures in, along, or across private property with full rights of ingress, egress and regress.
4. If, at any time, the SFTF covered by this permit creates a public nuisance, including but not limited to, causing malodors or causing environmental harm to waters of the Commonwealth, DEP may require the permittee to adopt appropriate remedial measures to abate the nuisance or harm.
5. If, after the issuance of this permit, DEP approves a municipal sewage facilities official plan or an amendment to an official plan under Act 537 (Pennsylvania Sewage Facilities Act, the Act of January 24, 1966, P.L. 1535 as amended) in which sewage from the herein approved facilities will be treated and disposed of at other planned facilities, the permittee shall, upon notification from the municipality or DEP, provide for the conveyance of its sewage to the planned facilities, abandon use and decommission the herein approved facilities including the proper disposal of solids, and notify DEP accordingly. The permittee shall adhere to schedules in the approved official plan, amendments to the plan, or other agreements between the permittee and municipality. This permit shall then, upon notice from DEP, terminate and become null and void and shall be relinquished to DEP.
6. The approval of the plans, and the authority granted in this permit, if not specifically extended, shall cease and be null and void 5 years from the issuance date of this permit unless construction or modification of the facilities covered by this permit has begun on or before the fifth anniversary of the permit date.
7. This permit does not relieve the permittee of any obligations to comply with all federal, interstate, state or local laws, ordinances and regulations applicable to the sewerage facilities.
8. This permit does not give any real or personal property rights or grant any exclusive privileges, nor shall it be construed to grant or confer any right, easement or interest in, on, to, or over any lands which belong to the Commonwealth.
9. The authority granted by this permit is subject to all effluent requirements, monitoring requirements, and other conditions as set forth in the NPDES Permit and all subsequent amendments and renewals. No discharge is authorized from these facilities unless approved by an NPDES Permit.

**Construction**

10. The SFTF shall be constructed under the supervision of a Pennsylvania licensed Professional Engineer in accordance with the approved reports, plans and specifications. Any deviations from approved plans or specifications so revised should, therefore, be submitted well in advance of any construction work, which will be affected by such changes to the permit to allow sufficient time for review and approval. Structural revisions or other minor changes not affecting capacities, flows or operations will be permitted during construction without approval. Upon request, "as-built drawings" clearly showing such alterations shall be filed with DEP at the completion of the work.
11. When construction of the approved SFTF is completed and before it is placed in operation, the permittee shall notify DEP in writing so that a DEP representative **may** inspect the facilities. A Pennsylvania licensed Professional Engineer shall certify that construction of the permitted facilities was completed in accordance with the WQM application and design plans submitted to DEP, using the Post Construction Certification form (3800-PM-WSFR0179a). It is the permittee's responsibility to ensure that a Professional Engineer is on-site to provide the necessary oversight and/or inspections to certify the SFTF. The certification must be submitted to DEP within 30 days following completion of the SFTF, along with as-built drawings, photographs (if available), and a description of any DEP approved deviations from the NOI and design plans. The SFTF may not be placed into operation until DEP receives the completed Professional Engineer's certification.

12. The local Waterways Conservation Officer of the Pennsylvania Fish and Boat Commission (PFBC) shall be notified when the construction of any stream crossing and/or outfall is started and completed. A written permit must be secured from the PFBC if the use of explosives in any waterways is required and the permittee shall notify the local Waterways Conservation Officer when explosives are to be used.

### **Operation and Maintenance**

13. The permittee shall maintain SFTF operation and maintenance (O&M) manuals at the facility and ensure proper O&M of the permitted facility. The permittee shall file the O&M manuals with DEP upon request.
14. Stormwater from roofs, foundation drains, basement drains or other sources shall not be admitted directly to the SFTF.
15. The SFTF shall be properly maintained so that the facility will perform as designed.
16. There shall be no physical connection between a public water supply system and a sewer or appurtenance to it which would permit the passage of any sewage or polluted water into the potable water supply. No water pipe shall pass through or come in contact with any part of the SFTF.
17. Collected screenings, slurries, sludge and other solids shall be handled and disposed of in compliance with Title 25 Pa. Code, Chapters 271, 273, 275, 283 and 285 (related to permits and requirements for land filling, land application, incineration and storage of sewage sludge), Federal Regulations (40 CFR Part 257) and the Federal Clean Water Act and its amendments.

## **SPECIAL CONDITIONS**

Water Quality Management Permit No. 1721401

William C. & Sharon A. Walker

### A. SMALL FLOW SEWAGE TREATMENT FACILITIES

#### Operation and Maintenance

Any person receiving permits to construct and operate a small flow treatment facility to treat and discharge sewage is responsible for the operation and maintenance of the facilities, and for any health nuisances or pollution problems which may result.

Access to all tanks or compartments of each tank shall be provided by a removable cover to provide for easy operation and maintenance.

Several key factors with respect to operation and maintenance follow:

1. It is crucial that adequate disinfection of the sewage be continuously provided on a year-round basis to minimize public health risk. Therefore, regular and routine attention must be given to ensure that disinfection equipment is operational (e.g., adding chlorine tablets to erosion feed system, filling chlorine solution crock, etc.). A small chlorine residual (approximately 0.5 mg/l must be maintained in the treated discharge. NOTE: Erosion chlorinators are prone to "bridging" of the tablets which results in no chlorine contact. Regular maintenance is necessary to identify and correct this problem.
2. The depth of sludge and scum in the septic tank should be measured at least once a year. When the top of the sludge layer in the tank or any compartment of the tank is found to be less than 12 inches below the bottom of the outlet baffle, or if the bottom of the scum layer is within three inches of the outlet baffle, the tank must be pumped. Annual pumping may be substituted for measurement. Such cleaning is recommended to minimize plugging of the sand filter with solids and avoid deterioration of the treated effluent. Failure to pump treatment and dosing tanks often results in costly repairs or replacement. NOTE: Following septic tank cleaning, all interior surfaces of the tank should be inspected for leaks and cracks using a strong light. Pumped-out septic tanks contain toxic gases; therefore, only a properly equipped, trained, and experienced person should attempt to enter and repair a septic tank if this should become necessary. **THE HOMEOWNER SHOULD NOT ENTER A SEPTIC TANK.**
3. The use of biological or chemical additives in the septic tank is not recommended or necessary.
4. Dosing tanks should be opened at least once a year and settled solids removed as necessary.
5. Aerobic treatment plants shall be maintained in accordance with manufacturer's instructions or pumped at least once a year to remove excess solids in order to minimize plugging of the sand filter and avoid deterioration of the discharge.
6. An operation and maintenance manual for the owner's use is to be provided by the designer.
7. For mechanical equipment (i.e., aerobic treatment units, spray nozzles, etc.), a service contract with the equipment representative must be executed so periodic inspection and "as needed" services are provided.
8. To minimize water usage, water conservation fixtures should be used (e.g., 1.6-gallon flush toilets, shower and faucet restrictors, and front-loading washers).

B. SAND FILTER SPECIFICATIONS

Only clean filter sand is to be used in the Intermittent Sand Filters with a minimum placement depth of 24 inches. The sand shall have an Effective Size of between 0.3 to 0.6 mm, a Uniformity Coefficient of less than 3.5 and less than 4% of the coarse aggregate passing the #100 sieve. The sieve analysis shall be conducted in accordance with Department of Transportation Pennsylvania Test Method (PTM) #616 and the Uniformity Coefficient shall be determined by using Department of Transportation PTM #149. The sand may not contain more than 15% by weight deleterious material as determined by Department of Transportation PTM #510.

Sand suppliers shall provide a written certification to the Department and the Permittee that includes the name of the supplier, the testing results, the testing date, the amount of material purchased under this certification and the delivery date.
