Date Application Acce	pted	January 30, 2019	If No, Reason	Major Facility

Summary of Review

The applicant has applied for a renewal of an existing NPDES Permit, Permit No. PA0095087, which was previously issued by the Department on March 25, 2014. That permit expired on March 31, 2019.

WQM Permit 0484403 A-1, issued on November 19, 1993, approved STP expansion with a hydraulic design capacity of 2.13 MGD and organic capacity of 3,167 lbs/day. The existing treatment process consists of bar screen/grit chamber, flow equalization, primary clarifiers, trickling filtration, final clarifiers and chlorination.

The receiving stream, Brady Run, is classified as a TSF and is located in State Watershed No. 20-B

Storm Water Outfall 010 will again be permitted for the discharge of un-contaminated storm water runoff from areas in and around the treatment plant. Part C.IV, Requirements Applicable to Storm Water Outfalls, has again been added to the Permit.

The applicant has complied with Act 14 Notifications and no comments were received.

Sludge use and disposal description and location(s): Solids from aerobic digestion are dewatered, via belt filter press, and disposed of at a DEP approved landfill.

Public Participation

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-

Summary of Review
day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the <i>Pennsylvania Bulletin</i> at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Technology-Based Limitations

The following technology-based limitations apply, subject to water quality analysis and BPJ where applicable:

Pollutant	Limit (mg/l)	SBC	Federal Regulation	State Regulation
CBOD₅	25	Average Monthly	133.102(a)(4)(i)	92a.47(a)(1)
CBOD5	40	Average Weekly	133.102(a)(4)(ii)	92a.47(a)(2)
Total Suspended	30	Average Monthly	133.102(b)(1)	92a.47(a)(1)
Solids	45	Average Weekly	133.102(b)(2)	92a.47(a)(2)
pН	6.0 – 9.0 S.U.	Min – Max	133.102(c)	95.2(1)
Fecal Coliform				
(5/1 – 9/30)	200 / 100 ml	Geo Mean	-	92a.47(a)(4)
Fecal Coliform				
(5/1 – 9/30)	1,000 / 100 ml	IMAX	-	92a.47(a)(4)
Fecal Coliform				
(10/1 – 4/30)	2,000 / 100 ml	Geo Mean	-	92a.47(a)(5)
Fecal Coliform				
(10/1 - 4/30)	10,000 / 100 ml	IMAX	-	92a.47(a)(5)
Total Residual Chlorine	0.5	Average Monthly	-	92a.48(b)(2)

Comments: The attached WQM 7.0 & TRC_CALC Modeling Data confirms that the above Technology-Based Limitation for CBOD₅ & TRC is applicable.

Water Quality-Based Limitations

A "Reasonable Potential Analysis" (Attachment WQM 7.0 Output Data, Toxic Management Spreadsheet, & TRC_CALC Spreadsheet) was conducted.

No limitations were determined through water quality modeling using DEPs WQM 7.0 Model, Toxic Management Spreadsheet Version 1.1 & TRC_CALC Spreadsheet, and no WQBELs will be imposed on this facility during this permit cycle.

This discharge was evaluated at the confluence of Brady Run and the Beaver River, which is consistent with how the limits were developed in previous renewal permits. WQM 7.0 modeling included discharges from the New Brighton STP (NPDES Permit No. PA0026026), and City of Beaver Falls STP (NPDES Permit No. PA0026883)

, both majors which discharge upstream on the Beaver River.

The NPDES Permit Application indicates that the STP does not receive IW flow from an IU.

Best Professional Judgment (BPJ) Limitations

Comments: A Dissolved Oxygen minimum limitation of 4.0 mg/L will be implemented based on the standard in 25 PA Code Chapter 93 and best professional judgment.

Anti-Backsliding

Section 402(o) of the Clean Water Act (CWA), enacted in the Water Quality Act of 1987, establishes anti-backsliding rules governing two situations. The first situation occurs when a permittee seeks to revise a Technology-Based effluent limitation based on BPJ to reflect a subsequently promulgated effluent guideline which is less stringent. The second situation addressed by Section 402(o) arises when a permittee seeks relaxation of an effluent limitation which is based upon a State treatment standard of water quality standard.

Previous limits can be used pursuant to EPA's anti-backsliding regulation 40 CFR 122.44 (I) Reissued permits. (1) Except as provided in paragraph (I)(2) of this section when a permit is renewed or reissued. Interim effluent limitations, standards or conditions must be at least as stringent as the final effluent limitations, standards, or conditions in the previous permit (unless the circumstances on which the previous permit was based have materially and substantially changed since the time the permit was issued and would constitute cause for permit modification or revocation and reissuance under §122.62). (2) In the case of effluent limitations established on the basis of Section 402(a)(1)(B) of the CWA, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 304(b) subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit.

The facility is not seeking to revise the previously permitted effluent limits.

Additional Considerations:

For pH, DO and TRC, a monitoring frequency 1/day has been imposed. In general, less frequent monitoring may be established only when the permittee demonstrates that there will be no discharge on days where monitoring is not required.

Sewage discharges will include monitoring, at a minimum, for E. Coli, in new and reissued permits, with a monitoring frequency of 1/month for facilities with a design flows >= 1 MGD per Chapter 92.a.61.

Nutrient monitoring is required to establish the nutrient load from the wastewater treatment facility and the impacts that load may have on the quality of the receiving stream(s). A 1/quarter monitor and report requirement for Total N & Total P has been added to the permit per Chapter 92.a.61.

For existing discharges (NPDES Renewal Applications), if WQM7.0 modeling results for summer indicates that an average monthly warm period limit of 25 mg/L (default in model) is acceptable for ammonia-nitrogen, a year-round monitoring requirement, at a minimum should be established.

Mass loading limits are applicable for publicly owned treatment works. Current policy requires average monthly mass loading limits be established for CBOD5, TSS, and NH $_3$ -N and average weekly mass loading limits be established for CBOD5 and TSS. Average monthly mass loading limits (lbs/day) are based on the formula: design flow (MGD) x concentration limit (mg/L) x conversion factor (8.34).

For POTWs with design flows greater than 2,000 GPD influent BOD $_5$ and TSS monitoring must be established in the permit, and the monitoring should be consistent with the same frequency and sample type as is used for other effluent parameters.

Monitoring frequency for the proposed effluent limits are based upon Table 6-3, Self-Monitoring Requirements for Sewage Dischargers, from the Departments Technical Guidance for the Development and Specification of Effluent Limitations. Please note that Monitoring Requirements were changed for Flow to 2/week Metered to be consistent with the guidance.

3. Determine Dilution Series

(NOTE – check Attachment C of WET SOP for dilution series based on TIWCa or TIWCc, whichever applies). Dilution Series = 100%, 60%, 30%, 2%, and 1%.

WET Limits

Has reasonable potential been determined? ☐ YES ☒ NO

Will WET limits be established in the permit? ☐ YES ☒ NO

If WET limits will be established, identify the species and the limit values for the permit (TU).

N/A

If WET limits will not be established, but reasonable potential was determined, indicate the rationale for not establishing WET limits:

N/A

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.

WQM 7.0 Modeling Specifications

Parameters	Both	Use Inputted Q1-10 and Q30-10 Flows	~
WLA Method	Uniform Treatme	Use Inputted W/D Ratio	$\lceil \ \rceil$
Q1-10/Q7-10 Ratio	0.64	Use Inputted Reach Travel Times	[]
Q30-10/Q7-10 Ratio	1.08	Temperature Adjust Kr	4
D.O. Saturation	85.00%	Use Balanced Technology	
D.O. Goal	5		

From Storet Deta for period of record
1961-1991, Q30-10 flow = 693.5 cfs.
Therefore, Q30-10/Q7-10 retio = 693.5 cfs/c40ch=

1.08.

☑ Recommended WQBELs & Monitoring Requirements

No. Samples/Month: 4

	Mass	Limits	Concentration Limits						
Pollutants	AML (lbs/day)	MDL (lbs/day)	AML	MDL	IMAX	Units	Governing WQBEL	WQBEL Basis	Comments

Other Pollutants without Limits or Monitoring

The following pollutants do not require effluent limits or monitoring based on water quality because reasonable potential to exceed water quality criteria was not determined and the discharge concentration was less than thresholds for monitoring, or the pollutant was not detected and a sufficiently sensitive analytical method was used (e.g., <= Target QL).

Pollutants	Governing WQBEL	Units	Comments
Total Dissolved Solids (PWS)	N/A	N/A	PWS Not Applicable
Chloride (PWS)	N/A	N/A	PWS Not Applicable
Bromide	N/A	N/A	No WQS
Sulfate (PWS)	N/A	N/A	PWS Not Applicable
Total Aluminum	15,334	μg/L	Discharge Conc ≤ 10% WQBEL
Total Antimony	N/A	N/A	Discharge Conc < TQL

Applicant: Bradys Run Sanitary Authority
Name of plant: Bradys Run Sanitary Authority STP

Permit Number: PA0095087

Municipality: Chippewa Township
County: Beaver County
Receiving stream: Bradys Run

The following program will calulate partial mix factors for acute and chronic conditions:

calculated fields

net stream flow (Qs cfs)= 640.35 discharge flow (Qd mgd)= 2.13 velocity (fps)= 0.108 width (feet) = 400 depth (feet) = 15 slope (ft/ft) = 0.00004

complete mix time (min) = 590.76

FOR ACUTE CONDITIONS: IF COMPLETE MIX TIME < 15 MINUTES

THEN PMF = 1, IF > 15 MINUTES CALCULATE PMFa

PMFa = 0.159 or 15.93 %

FOR CHRONIC CONDITIONS: IF COMPLETE MIX TIME < 720 MINUTES

THEN PMF = 1, IF > 720 MINUTES CALCULATE PMFc

PMFc = 1.000 or 100.00 %

IWCc=[Qd * 1.547] / [(Qs*PMFc) + (Qd * 1.547)] = 0.0051

Target IWCc=IWCc/1= 0.005 0.51 %

IWCa=[Qd * 1.547]/[(Qs*PMFa)+(Qd * 1.547)] = 0.0313

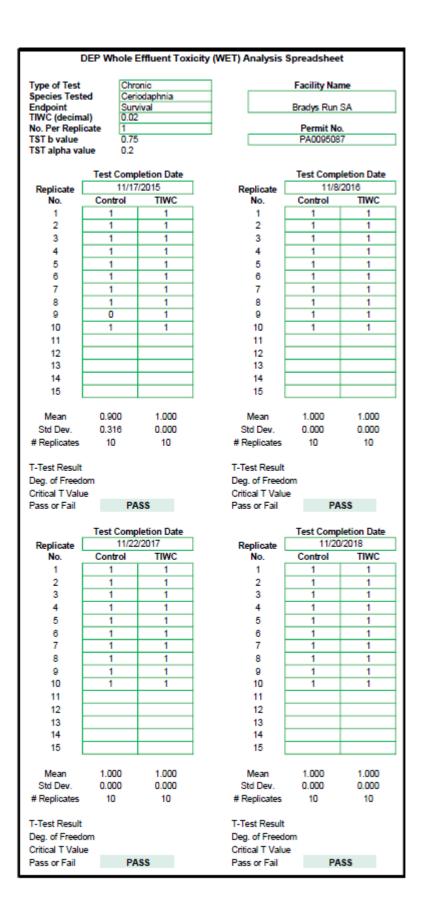

Target IWCa=IWCa/0.3= 0.104 or 10.43 %

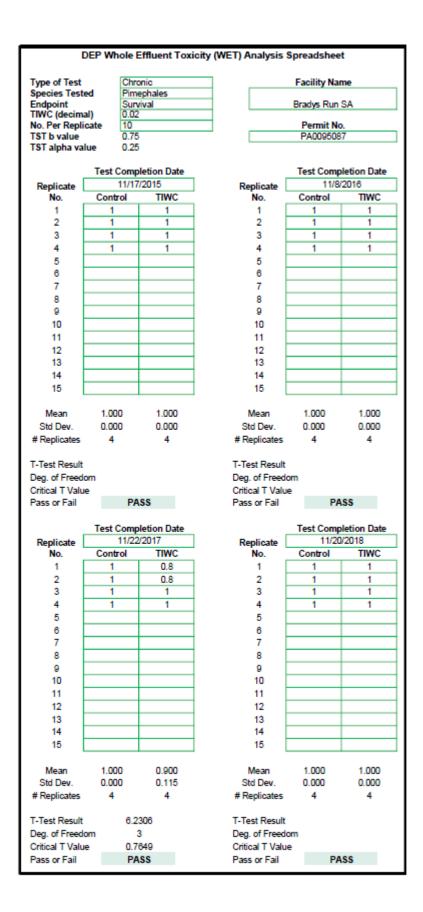

WET tests should pass if percentage for C.dubia LC50 and P.promelas LC50 are greater than the target IWCa (acute) or NOEC > target IWCc (chronic).

Program written by David Ponchione on April 8, 1999

Program run by: W. Mitchell on January 14, 2021
