Applicant Phone	(717) 5	31-3308	Facility Phone	(724) 287-7150
Client ID	87712		Site ID	451534
SIC Code	4941		Municipality	Oakland Township
SIC Description	Trans.	& Utilities - Water Supply	County	Butler
Date Application Rece	eived	December 2, 2019	EPA Waived?	Yes
Date Application Accepted December 23, 20		December 23, 2019	If No, Reason	

Summary of Review

This facility is primarily engaged in inter basin water transfer from the Allegheny River near East Brady to an unnamed tributary to Connoquenessing Creek and Thorn Creek to replenish water levels in the Oneida and Thorn Run Reservoirs when necessary.

There is currently no treatment installed at this facility for the transferred water. The facility does however have a WQM Permit (No. 1095201) for dechlorination equipment, which was never installed.

The permittee is currently using the eDMR system for reporting.

There are currently four open violations listed in EFACTS for this permittee, all at different facilities (4/14/2021). The Department encourages the permittee to address these violations during the draft comment period.

Public Participation

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Wastewater D	Description: Water Transfer Discharge					

Technology-Based Limitations

The following technology-based limitations apply, subject to water quality analysis and BPJ where applicable:

Parameter	Limit (mg/l)	SBC	Federal Regulation	State Regulation
pН	6.0 – 9.0 S.U.	Min – Max	133.102(c)	95.2(1)

Water Quality-Based Limitations

The following limitations were determined through water quality modeling (output files attached):

Parameter	Limit (mg/l)	SBC	Model
Total Copper	0.0069	Average Monthly	Toxic Management Spreadsheet Ver 1.3
Total Copper	0.012	Daily Maximum	Toxic Management Spreadsheet Ver 1.3

Comments: The TMS was first run using effluent data collected during the renewal application. This resulted in numerous parameters having recommended WQBELs due to reasonable potential. Since only one effluent sample was collected and tested for the renewal application, and the fact that this is essentially water that is drawn from the Allegheny River, water quality data from the nearest upstream WQN Station on the Allegheny River (WQN 867 in Kennerdale, PA) was used for modeling purposes for parameters that had recommended WQBELs. Data from May through September (typical low from period) from 2013-2017 was tabulated in the Department's TOXCONC Ver. 2.0 Spreadsheet to calculate an average monthly concentration and a daily CV to input into the TMS.

The permittee indicated on the "Pre-Draft Permit Survey that they did not know if they could meet the new total copper limits currently and did not know how long it would take them to meet the new limits. A four-year compliance schedule was added to the permit, with monitoring in the interim period, to give the permittee to conduct studies, additional sampling, and/or make operational changes in order to meet the new limits.

The Toxic Management Spreadsheet (TMS) also recommended monitoring for total dissolved solids, total aluminum, total arsenic, total iron, total nickel, total phenols (phenolics), and total zinc in the renewed permit. Monitoring for total dissolved solids and total phenols was based on public water supply criteria at the nearest downstream water supply, which happens to be this same permittee. Since there is significant dilution available in the downstream reservoirs where the water is drawn from, and the fact that the permittee is also the owner of the public water supply which treats the surface water, it was decided not include monitoring for these parameters over public water supply concerns. All other parameters that the spreadsheet recommended monitoring for will have a monitoring requirement in the permit at a reduced monitoring frequency of 2/month to collect data for future water quality modeling. Monitoring will be conducted and reported for at the internal monitoring point (IMP 100) due to monitoring being recommended for the same parameters at both Outfall 001 and 002, and the effluent quality should be identical at IMP 100 and this outfall.

Best Professional Judgment (BPJ) Limitations

Comments: None

Other Considerations

Comments: Monitoring of flow will be retained based on Chapter 92a.61.

Monitoring for total hardness will be placed in the permit at a frequency of 1/month to collect data for future water quality modeling since many of the metal criteria for parameters of concern are hardness-based.

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

Outfall 001, Effective Period: July 1, 2025 through Permit Expiration Date.

			Effluent L	imitations			Monitoring Red	quirements
Parameter	Mass Units	(lbs/day) (1)		Concentrat	Minimum (2)	Required		
Parameter	Average Monthly	Average Weekly	Minimum	Average Monthly	Maximum	Instant. Maximum	Measurement Frequency	Sample Type
		0.45			0.012			
Total Copper	0.26	Daily Max	XXX	0.0069	Daily Max	0.017	1/week	Calculation

Compliance Sampling Location: Outfall 001 (see comment below)

Other Comments: The sampling conducted at Internal Monitoring Point 100, along with the flow measured at this outfall during the day of sampling, shall be used to determine compliance with the above limits

Other Pollutants without Limits or Monitoring

The following pollutants do not require effluent limits or monitoring based on water quality because reasonable potential to exceed water quality criteria was not determined and the discharge concentration was less than thresholds for monitoring, or the pollutant was not detected and a sufficiently sensitive analytical method was used (e.g., <= Target QL).

Pollutants	Governing WQBEL	Units	Comments
Chloride (PWS)	252	mg/L	Discharge Conc ≤ 10% WQBEL
Bromide	N/A	N/A	No WQS
Sulfate (PWS)	252	mg/L	Discharge Conc ≤ 10% WQBEL
Fluoride (PWS)	N/A	N/A	Discharge Conc < TQL
Total Antimony	N/A	N/A	Discharge Conc < TQL
Total Barium	2,402	μg/L	Discharge Conc ≤ 10% WQBEL
Total Beryllium	N/A	N/A	No WQS
Total Boron	1,601	µg/L	Discharge Conc ≤ 10% WQBEL
Total Cadmium	0.21	µg/L	Discharge Conc < TQL
Total Chromium (III)	64.5	μg/L	Discharge Conc ≤ 10% WQBEL

4/14/2021 **Model Results** Page 8

Hexavalent Chromium	10.4	μg/L	Discharge Conc < TQL
Total Cobalt	19.0	μg/L	Discharge Conc ≤ 10% WQBEL
Total Cyanide	N/A	N/A	No WQS
Dissolved Iron	300	µg/L	Discharge Conc ≤ 10% WQBEL
Total Lead	2.03	μg/L	Discharge Conc < TQL
Total Manganese	1,001	µg/L	Discharge Conc ≤ 10% WQBEL

Total Zinc	Report	Report	Report	Report	Report	µg/L	88.8	AFC	Discharge Conc > 10% WQBEL (no RP)

Other Pollutants without Limits or Monitoring

The following pollutants do not require effluent limits or monitoring based on water quality because reasonable potential to exceed water quality criteria was not determined and the discharge concentration was less than thresholds for monitoring, or the pollutant was not detected and a sufficiently sensitive analytical method was used (e.g., <= Target QL).

Pollutants	Governing WQBEL	Units	Comments
Chloride (PWS)	258	mg/L	Discharge Conc ≤ 10% WQBEL
Bromide	N/A	N/A	No WQS
Sulfate (PWS)	258	mg/L	Discharge Conc ≤ 10% WQBEL
Fluoride (PWS)	N/A	N/A	Discharge Conc < TQL
Total Antimony	N/A	N/A	Discharge Conc < TQL
Total Barium	2,402	µg/L	Discharge Conc ≤ 10% WQBEL
Total Beryllium	N/A	N/A	No WQS
Total Boron	1,601	µg/L	Discharge Conc ≤ 10% WQBEL
Total Cadmium	0.21	µg/L	Discharge Conc < TQL
Total Chromium (III)	64.6	μg/L	Discharge Conc ≤ 10% WQBEL

4/14/2021 **Model Results** Page 8

Hexavalent Chromium	10.4	μg/L	Discharge Conc < TQL
Total Cobalt	19.0	μg/L	Discharge Conc ≤ 10% WQBEL
Total Cyanide	N/A	N/A	No WQS
Dissolved Iron	300	μg/L	Discharge Conc ≤ 10% WQBEL
Total Lead	2.03	μg/L	Discharge Conc < TQL
Total Manganese	1,001	µg/L	Discharge Conc ≤ 10% WQBEL
Total Mercury	0.05	μg/L	Discharge Conc < TQL
Total Selenium	4.99	μg/L	Discharge Conc < TQL
Total Silver	2.06	μg/L	Discharge Conc < TQL
Total Thallium	0.24	μg/L	Discharge Conc < TQL
Total Molybdenum	N/A	N/A	No WQS
