Changes Since Last Permit Issuance: None.

Other Comments: This SRSTP does not qualify for the PAG-04 General Permit due to the use of an Orenco AdvanTex Treatment System and an AdvanTex Filter system (AX20-RT).

No modeling was performed since this is a renewal of an existing NPDES Permit and the technology-based limits set are already below the inputs of the model.

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

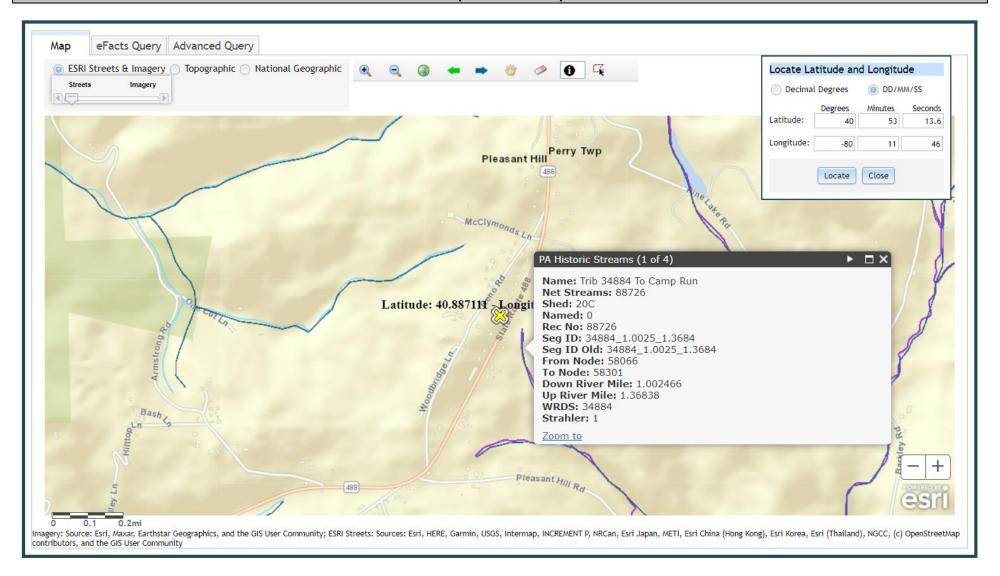

Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.

Compliance Sampling Location: <u>Outfall 001, after disinfection</u>

Other Comments: Flow is monitor only based on Chapter 92a.61. The limits for BOD₅ and Total Suspended Solids are BPJ limits based on the Small Flow Treatment Facilities Manual. Fecal Coliform is technology-based on Chapter 92a.47. The limits for pH are technology-based on Chapter 93.7.
