**Project Cost:** \$1,009,391.55 (Completed Cost), \$953,773.53 (Bid Amount)

**Project Area:** 78.0 acres

**Purpose:** This project will eliminate 7,300 feet of dangerous highwall, three (3) water filled pit areas, create two (2) permanent ponds and mitigate the disturbed wetlands sufficiently.

**Description:** Annandale South consists of five (5) pre-act abandoned mine dangerous highwalls. These abandoned mine land features (AMLF) are part of Problem Area 2903 on the West Sunbury 7.5 Minute USGS Quadrangle Map. On the map, the highwalls are designated as AMLF No. 2903-08 (DH), -12 (DH), -17 (DH), -09 (DH) and -02 (DH). The spoil areas are designated as AMLF Nos. 2903-09 (SA), -14 (SA), -18 (SA), -21 (SA) and -23 (SA). AMLF No. 2903-14 (SA) will be used to backfill AMLF No.2903-08 (DH). AMLF No. 2903-09 (SA) and AMLF No.2903-21 (SA) are used to backfill AMLF No. 2903-12 (DH). AMLF No. 2903-18 (SA) is used to backfill AMLF No. 2903-17 (DH). AMLF No. 2903-23 (SA) is used to backfill AMLF No. 2903-19 (DH) and AMLF No. 2903-22 (DH). The flooded strip mines are designated as AMLF No. 2903-10 (DH) and AMLF No. 2903-11 (PI) and are located at the northern section of the project area. They contain 0.44 acres of wetlands. The intent is to backfill the pit area with the embankments and direct all surface water to the proposed wetlands and permanent pond No. 1.

The abandoned highwalls are a result from Tri-County Fuel Company which ceased mining in 1951.
