# **SURFACE WATER METERING PLAN FOR CHIQUES CREEK**

## **ATLANTIC SUNRISE PROJECT**

**West Hempfield Township, Lancaster  
County, Pennsylvania**

**Prepared For:**

**TRANSCONTINENTAL GAS PIPE LINE  
COMPANY, LLC  
HOUSTON, TEXAS**

**Prepared By:**

**TETRA TECH, INC.  
PITTSBURGH, PENNSYLVANIA**

**March 2016**

## SRBC Surface Water Withdrawal Application Metering Plan

### A. Intake Design

The surface water withdrawal location on Chiques Creek is located along the proposed gas pipeline route where the water will be required for hydrostatic testing. Water will be transferred from Chiques Creek directly to the pipeline and/or hydrotest equipment for hydrostatic testing. This water source will only be used to supply water during pipeline construction and testing. Transcontinental Gas Pipe Line, LLC (Transco) proposes to use two (2), 4.5-foot long, 6.75-inch radius aluminum screens with slot-size openings of 0.125-inch that are manufactured by Sure-Flo™ to withdraw water from Chiques Creek. Each 4.5-foot long screen will be connected with a T fitting as a single assembly from the manufacturer. This intake structure will include a foot valve which will maintain a flooded suction line and prevent backflow. The intake screen will be connected to a 12-inch diameter flexible hose or HDPE suction pipe. The intake structure will be a floated intake submerged in the approximate location of the creek's thalweg (lowest point of creek channel) in close proximity to the project site. The approximate water depth at the point of withdrawal is 6 feet. The slot openings were sized to avoid potential aquatic impacts associated with impingement and entrainment. Calculations for the intake's through-screen approach velocity (provided in Attachment A-1) show the screen entrance velocity to be less than 0.5 feet per second (ft/s). Manufacturer information for the intake screens is included in Attachment A-2.

Transco proposes to use one 6" by 6" Pioneer Prime Series PP66C14 vacuum assisted, end suction centrifugal pump. This pump is mechanically driven and operates at a maximum of 2,200 revolutions per minute. Pump specification sheets and head curves are included in Attachments A-3 and A-4, respectively. Transco will limit the instantaneous pumping rate by using a Cla Val Combination Rate of Flow Controller & Solenoid Shut-off Valve (Model 43-01) on the discharge end of the pump. Specifications are included in Attachment A-5. This valve will be locked to prevent unintentional changes to the flow rate. Transco's staff will be prepared to comply with monthly passby rates and withdrawal rates. To protect aquatic resources and downstream users, Transco will cease withdrawals from Chiques Creek when the creek flow at the assigned reference gage is at or falls below prescribed passby flows.

Transco will ensure that the intake screen is regularly maintained and free of debris. Specifically, to ensure that the screen area is open and not clogged, prior to each operating event, Transco will retrieve the screen intake apparatus from the creek and inspect it for any debris or material that could clog the intake and reduce pumping efficiencies. In addition, the flow rate will be monitored during operation. If the pumping flow rate decreases by 20% or more during operation, the pump will be turned off and the screen intake assembly will be retrieved from the creek and inspected to ensure the screen is not clogged which could result in increased entrance velocities. If debris is present in and around the screen opening, the screen will be cleaned prior to being put back into operation.

Water will be conveyed to the pipeline for hydrostatic testing from the skid/trailer-mounted pump through a combination of 6-inch steel and 8-inch flexible hose or HDPE pipe. This pipe was sized to accommodate up to 2,000 gpm flow rate (see Attachment A-6 for basis). Water used for the pipeline hydrostatic testing will be discharged at a Pennsylvania Department of Environmental

Protection permitted location (i.e., PAG-10 permit). The main pipeline hydrostatic testing is scheduled for May 2017.

A wetland study was completed for the area on May 2, 2015. No wetlands were identified in the vicinity of the proposed intake. The intake pump will be located within the Federal Emergency Management Agency (FEMA) floodplain but outside of the FEMA floodway. The slope of the creek bank at the proposed location is gradual. All equipment will be temporary and removable, minimizing impact to riparian vegetation. Portable secondary containment will be utilized around the pump. It should also be noted that the pump will be located within the Transco project right-of-way and limit-of-disturbance.

Transco intends to put in place protective controls at its withdrawal site to enforce the passby requirements set by the SRBC with the intent to protect the stream during low-flow periods. For this project, flow rates at the proposed withdrawal point will be estimated by proportioning based on the drainage area ratio method from a selected USGS gaging station near Chiques Creek. At the proposed withdrawal location, Chiques Creek has a drainage area of 62.1 square miles (mi<sup>2</sup>). Based on that drainage area, the Aquatic Resource Class (ARC) of Chiques Creek is classified as ARC 3, which represents a small river. Creeks classified as ARC 3 are likely to be moderately sensitive to potential impacts from withdrawals due to their size, position in the landscape, and flow volumes.

Transco will stop or decrease withdrawals during low flow periods to avoid negatively impacting the quality of Chiques Creek. Flow rate data for a SRBC-selected stream or river located near Chiques Creek that has an active USGS gaging station will be used to estimate the flow rate of Chiques Creek during surface water withdrawals.

## **B. Metering**

To meter the volume of water withdrawn at the surface water withdrawal location, a 6-inch Seametrics AG2000 Irrigation Magmeter will be used (see manufacturer information in A-7). This spool-type electromagnetic flow meter and totalizer has no moving parts and minimal straight pipe requirements both above (i.e., 12 inches, minimum) and below (i.e., 6 inches, minimum) the meter. This allows unobstructed flow and makes it an ideal choice for use in surface water withdrawal applications where debris may cause damage to the equipment. This model is capable of displaying up to 5 digits for flow rate and 8 digits for the totalizer. The minimum flow rate for this model of flow meter is 32 gpm; the maximum rate is 2,400 gpm. The proposed withdrawal rate of 2,000 gpm is within this range. The meter is accurate to within +/-1% for flows between 240 gpm and 2400 gpm and +/- 2% for flows under 240 gpm. The flow meter will be installed so that it cannot be bypassed, zeroed, or reset.

Transco will check the totalizer daily prior to pumping water from Chiques Creek and at the end of each day to ensure that the proposed 2.880 MGD maximum daily withdrawal is not exceeded. Transco will maintain daily records of the project's withdrawal and consumptive water use and shall report the data to the SRBC on a quarterly and annual basis or as prescribed. Transco will also ensure that the meter readout will be accessible for SRBC staff at all times without locks, keys or other special access requirements.

**C. Plans, Details, and Maps**

A site plan, cross-section, details, and location map can be found in Attachment A-8. Site Photographs are included in Attachment A-9.

## **A-1 Intake Screen Calculations**

CLIENT:	TRANSCO		JOB NUMBER:	212C-PB-00282		
SUBJECT:	CHIQUES CREEK SCREENED INTAKE EVALUATION					
BASED ON:	Sure-Flo® Suction Line Fittings Catalog			DRAWING NUMBER:		
BY:	DTK	CHECKED BY:	LMH	APPROVED BY:	CAR	
DATE:	10/28/2015	DATE:	11/5/15	DATE:	11/9/2015	

**PURPOSE:**

The purpose of this calculation is to evaluate the minimum number of intake screens necessary to meet the requirement of maximum intake velocity of 0.5 feet per second.

**APPROACH:**

Use typical industry equations to calculate the minimum number of Sure-Flo® J-Series Modified Double Decked intake screens necessary to allow a flow rate of 2,000 gallons per minute. Assume multiple intake screens with perforated 1/8-inch holes.

**CALCULATIONS:**

- (1) Data was obtained from the Sure-Flo® Fittings.

d	=	0.125	=	Maximum perforation diameter, inches
V	=	0.5	=	Maximum intake velocity, feet per second
Q	=	2,000	=	Maximum flow (withdrawal) rate, gallons per minute
r	=	6.75	=	Radius of perforated intake pipe, inches
b	=	4.5	=	length of perforated intake pipe, feet
n	=	unknown	=	number of screens
A <sub>s</sub>	=	2,290	=	Area of screen (A <sub>s</sub> = 2πrb), square inches
A <sub>o</sub>	=	942	=	Open area of screen, square inches (see attached)
P	=	41.1%	=	Open area of perforated intake pipe (P = A <sub>o</sub> /A <sub>s</sub> )

- (2) Use the following equation from the Handbook of Groundwater Development, Roscoe Moss Company, to calculate first the minimum number of Sure-Flo® J-Series Double Decked intake screens necessary for a withdrawal of 2,000 gallons per minute.

$$V = \frac{Q / n}{235 \times r \times b \times P}$$

$$n = \frac{Q}{235 \times r \times b \times P \times V}$$

$$n = \frac{2,000}{235 \times 6.75 \times 4.5 \times 0.411 \times 0.5}$$

$$n = 1.36$$

$$n = 2 \quad (\text{round up})$$

The minimum number of Modified Sure-Flo® J-Series Double Decked intake screens necessary to allow for a total flow of 2,000 gpm to be withdrawn is 2. Standard 3-foot screens do not provide sufficient area, so the intake apparatus will be modified with additional 18" length of screen (for a total length of 4.5', per screen section), as per factory.

- (3) Using the equation from Step 2, calculate the entrance velocity when 2 Modified Sure-Flo® J-Series Double Decked intake screens are used.

$$V = \frac{Q / n}{235 \times r \times b \times P}$$

$$V = \frac{2,000 / 2}{235 \times 6.75 \times 4.5 \times 0.411}$$

CLIENT: TRANSKO		JOB NUMBER: 212C-PB-00282	
SUBJECT: CHIQUES CREEK SCREENED INTAKE EVALUATION			
BASED ON: Sure-Flo® Suction Line Fittings Catalog		DRAWING NUMBER:	
BY: DTK	CHECKED BY: LMH	APPROVED BY: CAR	
DATE: 10/28/2015	DATE: 11/5/15	DATE: 11/9/2015	

$$V = 0.341 \text{ feet per second}$$

**CONCLUSION:**

Two Modified Sure-Flo® J-Series Double Decked intake screens provide an intake flow capacity of 2,000 gallons per minute with a maximum screen entrance velocity of 0.341 feet per second, which is well below the required maximum intake velocity of 0.5 feet per second. Therefore, Tetra Tech believes that the resulting velocity will minimize impingement and entrainment of aquatic organisms during operation. Additionally, to minimize sediment uptake, the submerged pump and intake screen will be floated to elevate the intake screen a minimum of 12-inches off of the creek bed.

# Foot Valves Information

- Sure-Flo foot valves combine an attachment coupling, a foot valve, and a strainer screen, all in one rugged and long-lasting unit.
- Made entirely of aluminum except for the bolts, rubber gaskets, and valve flapper, these valves are light in weight yet sturdy and efficient. The durable rubber flapper seats on a machined aluminum surface and provides a tight seal which minimizes leakage.
- Ample space is provided for the flapper to fold back out of the liquid stream, thus keeping friction loss to a minimum.
- Stainless steel hardware is available for all foot valves, and stainless steel screens are available for most foot valves.

## Body Type

**OD Tubing:** Compression gasket attachment for OD tubing, such as aluminum irrigation tubing.

**Female Thread:** For attachment to a NPT thread end, hose, steel pipe, or PVC.

**Companion Flange:** Matches the bolt pattern of a standard 125-pound cast iron companion flange or a schedule 80 PVC flange.

### 45° Valves

**OD Tubing**

## Series

**Basic Series:** Our most popular valves, great combination of price and performance.

**X-Series:** Provides larger screen open areas than the basic series.

**J and JD-Series:** Provides much larger open areas and the greatest selection of screen options.

**Horizontal Series:** Excellent for shallow water applications, very large screen open areas.

**Basic Series**

**X-Series**

**J-Series**

**JD-Series**

**Horizontal Series**

## Screen Options for Foot Valves

### Basic Series

Hole	Thickness	Material
1/8"	.080	aluminum
1/4"	.050	aluminum <u>standard</u>
1/4"	.080	aluminum
1/2"	.080	aluminum
1/4"	18 ga	stainless steel

### J and JD-Series

Hole	Thickness	Material
1/8"	.080	aluminum
1/4"	.080	aluminum <u>standard</u>

1"	.125	aluminum
1/4"	18 ga	stainless steel

### X-Series

Hole	Thickness	Material
1/8"	.080	aluminum <u>standard</u>
1/4"	.080	aluminum

# Information Foot Valves

## Additional Options

**Stainless steel bolts-** Stainless steel bolts, nuts, and washers are available upon request for all Sure-Flo foot valves for an additional charge.

**Foot valve drain kit-** All Sure-Flo foot valves larger than 3" are provided with a tapped and plugged outlet on the side of the body. By replacing this plug with the optional drain kit, suction line removal becomes much easier. One end of an inexpensive garden hose is attached to the drain fitting, and the other end is capped, with the provided hose cap, and secured near the pump. When ready to remove the suction line, simply remove the cap, and place the hose in the water. This will allow the suction line to drain down to the water surface.

### Klamplox flange-

Designed for Sure-Flo OD compression type foot valves and fittings, Klamplox flanges provide an extra secure connection. The flange is made as a two-piece unit, which clamps on the tubing and prevents it from being pushed out of the fitting under pressure. A separate aluminum gasket seal-ring assures uniform pressure against the gasket to prevent leakage.

## Foot Valve Loss Curves

### \* Foot Valve Installation \*

When installing Sure-Flo foot valves, it is important that the foot valve be in the proper position. The hump on the body is where the flapper is hinged and swings out of the liquid flow. This hump should be in the uppermost position, aimed towards the surface of the water source. The flapper is not spring loaded and requires a small amount of suction head (vertical distance from the water surface to the pump centerline), usually 4 feet is sufficient.

# Strainers

## Specialty

### Submersible Pump

A flow-inducer sleeve is used to direct water past a submersible pump motor when pumping conditions fail to provide adequate cooling. Sure-Flo strainers easily bolt on the end of a PVC (IPS) induction tube. **Sure-Flo does not supply the PVC tube.**

### Pump Support Plugs

Part No.	PVC Pipe Size	Discharge Pipe Size	Weight lbs.
PSP 4-1	4" IPS	1.0"	2.0
PSP 4-1¼	4" IPS	1.25"	1.5
PSP 6-1	6" IPS	1.0"	3.5
PSP 6-1¼	6" IPS	1.25"	3.5
PSP 6-1½	6" IPS	1.5"	3.5
PSP 6-2	6" IPS	2.0"	3.5
PSP 8-1	8" IPS	1.0"	6.0
PSP 8-2½	8" IPS	2.5"	6.0
PSP 8-3	8" IPS	3.0"	5.5
PSP 8-4	8" IPS	4.0"	5.0

The pump support plug has a compression gasket that holds the plug in the PVC tube and secures the pump discharge pipe. This is accomplished by tightening four compression bolts. An electrical wire clamp comes in each plug.

### Motor Support Pads

There are three adjustable, rubber, motor support pads which are included when purchasing the 6" pump support plugs and four pads with 8" pump support plugs.

Three Pad Set- MSP3  
 Four Pad Set- MSP4  
 Sets may be purchased separately.

### Submersible Pump Strainer

SFLMS6-D	6"	25	472 sq. in.
SFLMS8-D	8"	25	472 sq. in.

This rugged aluminum strainer quickly bolts on the end of an aluminum suction line. It will hold the weight of a man standing on the screen, yet it weighs only 20 pounds. Positioning the 284 1" holes in the 1/8" thick screen, is the secret to its ability to resist collapse. Available in a double-decked model for extra open area. Made from aluminum castings and a screen of high strength, corrosion resistant alloy and stainless steel bolts and nuts. It is designed for this demanding job.

## Gravel Pack

Part No.	Type and Thread Size	Weight lbs.
SFSGPV2	2" with foot valve	12.5
SFSGP2	2" without foot valve	9.5
SFSGP25	2.5" without foot valve	9.5
SFSGP3	3" without foot valve	10.0

Gravel Pack strainers are made with an inner screen of 1/8" perforated aluminum and an outer screen of 1/4" perforated aluminum. The space between these screens may be filled with pea gravel to provide a very effective filter for fine material in the water, including troublesome algae.

# Fittings

## Eccentric

**SFA68**

## Concentric

**SFA66**

# Pump Adapters

**PIPE THREADS to TUBING.** These fittings permit the use of Sure-Flo suction fittings on any pump with threaded intakes from 2" to 10". Made from new standard pipe with heavy gauge steel tubing welded to it. The fitting is then hot dipped galvanized. Frequently the suction line should be at least one size larger than the pump inlet. When the tubing size is more than 1" greater than pipe size, the fitting is eccentric. **Eccentric** adapters should be installed straight side up, as pictured, to avoid air pockets from forming.

Part No.	Male Pipe Size	OD Tube Size	Concentric (C) Eccentric (E)	Weight lbs.

# Couplers

For joining two pieces of irrigation tubing with an air tight suction joint. This fitting is made from three aluminum castings and is sealed by the compression of two rubber gaskets. Easily and quickly tightened without damage to the tubing. Light in weight and free from rust. Tubing must be supported on both sides of the coupler.

**SFC6**

Part No.	OD Tube Size	Weight lbs.

# Fittings

**SFE94**

**SFE44**

# Klamplox

Designed for Sure-Flo OD compression type foot valves and fittings, Klamplox flanges provide an extra secure connection. The flange is made as a two piece unit which clamps on the tubing and prevents it from being pushed out of the fitting under pressure. A separate aluminum gasket-seal-ring assures uniform pressure against the gasket to prevent leakage. Not more than 10 foot pounds of torque should be applied to the clamp bolts or flange bolts to prevent breakage of the aluminum castings

## Maximum Pressure Ratings:

**SFKE44**

# Fittings

**5-48GO**

**4-48GO Assy**

**SFTP6**

# Gun Outlets

## Universal Attachable Outlets

Available with 2½" riser pipe threads and for 4", 5", or 6" O.D. pipe. Simply clamp on the pipe with Permatex under the top half and then cut out the pipe with a hole saw.

Small "Guns" may be used on this sturdy outlet. The base is drilled for attaching a board for support of the sprinkler. If the gun has a larger opening than 2½", this may be bushed down to fit.

The usual procedure is to provide a number of outlets, each with a gate valve, and then to move the gun or guns from outlet to outlet along the line. This method saves much time and labor and permits continuous operation of the pump, if one extra gun is available.

May be attached to full lengths of pipe, thus, less expensive than special short lengths with outlets.

For use with tall risers, as for corn, the riser may be supported by a tripod attached to a support board under the outlet and to a band around the pipe.

Part No.	OD Tube Size	Weight lbs.
4-48GO	4"	3.5
5-48GO	5"	4.5
6-48GO	6"	5.5

2½" x 2" cadmium plated steel reducing nipple 7" long

# Tubing Plugs

Cast aluminum plugs which can be inserted into aluminum irrigation tubing to make a closure. May be pressed into the tubing, welded into it, riveted, or pinned into place, depending on the requirements. Also may be turned down to provide a looser fit if required.

These castings permit the use of tubing for many special products such as water tanks, fishing rod cases, etc.

SFTP8	8"	2.0

# Companion Flanges

# Fittings

Sure-Flo companion flanges are made with the same dimensions and bolt holes as standard 125-pound cast iron flanges used in the plumbing and pump trades.

They are not threaded, but are bored so that aluminum irrigation pipe can be fitted into the opening and welded in place.

These flanges permit the use of irrigation tubing in pipe lines and in pump connections. They are useful in food processing pipe lines and in industrial piping where low weight is important.

## **A-5 Flow Control Valve Specification**

**43-01**  
(Full Internal Port)

MODEL

**643-01**  
(Reduced Internal Port)

# Combination Rate of Flow Controller & Solenoid Shut-Off Valve

- Multi-functional Capability
- Includes Orifice Plate with Holder
- Optional Check Feature
- Easily Adjusted
- Every Valve Factory Tested

The Cla-Val Model 43-01/643-01 Combination Rate of Flow Controller and Solenoid Shut-Off Valve limits the maximum flow rate, regardless of changing line pressure. It is a hydraulically operated, pilot controlled, diaphragm valve. The pilot control is actuated by the differential pressure produced across an orifice plate installed downstream of the valve. Accurate control is assured as very small changes in the controlling differential pressure produce immediate corrective action of the main valve. A solenoid control is provided to intercept the operation of the differential control and close the main valve.

The Model 43-01/643-01 includes a orifice plate with a holder that should be installed one to five pipe diameters downstream of the main valve. If the check feature option is added and a pressure reversal occurs, the downstream pressure is admitted into the main valve cover chamber and the valve closes to prevent return flow.

## Schematic Diagram

Item	Description
1	Hytrol (Main Valve)
2	X58C Restriction Fitting
3	100-01 Hytrol (Reverse Flow)
4	CDHS18 Differential Control
5	CS3 Solenoid Control
6	X52E Orifice Plate Assembly

## Optional Features

Item	Description
A	X46A Flow Clean Strainer
B	CK2 (Isolation Valve)
C	CV Flow Control (Closing)
D	Check Valves with Isolation Valve
H	Solenoid Drain to Atmosphere
P	X141 Pressure Gauge
S	CV Speed Control (Opening)
V	X101 Valve Position Indicator
Y	X43 "Y" Strainer

The "D" feature on a vertically installed 6" and larger valves must be horizontally installed.

## Typical Applications

The 43-01/643-01 is typically installed where water supply to a system must be limited to a pre-set maximum flow rate at certain times of day. The valve is easily set to maintain the maximum allowable flow rate and is to open or close on an electrical signal.

The 43-01/643-01 is typically installed as a pressure type filter effluent control valve where a constant flow rate is maintained as head loss through the filter varies. The valve opens or closes on an electrical signal.

**Model 43-01** (Uses Basic Valve Model 100-01)

**Pressure Ratings** (Recommended Maximum Pressure - psi)

### Pilot System Specifications

**Adjustment Range**  
Low flow equals one-fourth maximum flow.

**Temperature Range**  
Water: to 180°F

**Electrical Ratings**  
24, 48, 120, 240, 480 - 60 Hz AC  
6, 12, 24, 120, 240 DC

**Materials**  
Standard Pilot System Materials  
Pilot Control: Bronze ASTM B62  
Trim: Stainless Steel 303  
Orifice Plate: Stainless Steel 303  
Rubber: Buna-N® Synthetic Rubber

Optional Pilot System Materials  
Pilot systems are available with optional Aluminum, Stainless Steel or Monel materials.

### When Ordering, Please Specify

1. Catalog No. 43-01 or No. 643-01
2. Valve Size
3. Pattern - Globe or Angle
4. Pressure Class
5. Threaded or Flanged
6. Trim Material
7. Adjustment Range/Orifice Bore
8. Energized or De-Energized to Open
9. Desired Options
10. When Vertically Installed

**Note:** Orifice plate assembly (X52E) may be attached to the main valve outlet flange, however, better control is obtained if it is located one to five pipe diameters downstream. Orifice plate sensing connection should be located in the pipeline on the side of the orifice plate assembly. The orifice plate assembly should not be mounted directly to a butterfly valve. See E-X52E Data Sheet for Orifice Bore adjustment range.

## **A-6 Pipeline Sizing Justification**

Title: Chiques Creek Pipe Size Calculation

Project Name: Atlantic Sunrise

Client: TRANSCO

Prepare By: DTK

Checked By: LMH

Date: 10/28/2015

Date: 11/10/2015

Design Flow Rate	2,000	gpm	
Length <sup>1</sup>	172	ft	
Elevation at Start <sup>1</sup>	280	ft MSL	
Elevation at Pump	286	ft MSL	
Elevation at End <sup>1</sup>	300	ft MSL	
Backpressure at Discharge	35	psig	(NOTE: to account for minor losses; throttle discharge valve as required)
Hazen-Williams Coefficient	140		
Suction Pipe Length	70	ft	

<sup>1</sup> design basis to transfer water to pipeline, additional equipment to be used by hydrotest contractor.

Estimate Pipe Size based on velocity

Maintain Velocity at needed area      15.0 ft/sec or less (temporary piping)  
 0.30 sf or a dia. =      7.4 inches I.D.

Pressure Drop Calculations

Use: Hazen-Williams Eq.:

$$h_f = \frac{0.2083 * \left(\frac{100}{C}\right)^{1.85} * Q^{1.85} * L}{100 * D^{4.8655}}$$

Flow rate, gpm	(gpm)	2,000	2,000	2,000	
Pipe Size	(inch)	8	10	12	
Outer Diameter	(inch)	8.625	10.75	12.75	
DR rating	-	13.5	13.5	13.5	
Diameter (D)*	(inch)	7.27	9.06	10.75

## **A-7 Flow Meter Specification**

### APPLICATIONS

- Irrigation
- Chemigation
- Agricultural automation
- Well usage monitoring
- Dairy Lagoons

### FEATURES

- Simple as a mechanical meter
- No moving parts
- Minimal straight pipe required
- Battery power standard; External power optional
- Solar compatible
- Built-in rate & total indicator
- Built-in pulse output for data-logging or telemetry
- Tamper-evident seal

AG2000-600

AG2000-300

Unobstructed Flow

**Seametrics' series of standard and IP68 (submersible) flanged magmeters.**

**Available in sizes from 3" up to 12".**

## GENERAL INFORMATION

The AG2000 is a spool-type electromagnetic flowmeter for use in irrigation applications in 3" to 12" pipe. With no moving parts, these meters provide unobstructed flow and are resistant to wear from debris found in ground or surface water. Little maintenance is required because there are no bearings to wear out or propellers to stop turning. Minimal straight pipe requirements allow AG2000 meters to be used in piping configurations where there is little space between the meter and an elbow.

The standard AG2000 is battery powered. Where an external power source is available, the AG2000 can be optionally converted to 8-32 Vdc, with the batteries then serving as back-up to maintain continuous operation in case of power failure. This configuration will prolong battery life indefinitely.

An IP68 version (-168 option) is available for burial or applications where the meter may be under water up to a depth of 3 meters for prolonged periods of time.

The meter comes with built-in pulse output (requires optional cable) for data logging or telemetry. Several pulse rates are available. An internal data logger is also available for secure flow logging (-127 option). A Seametrics FT415W or FT420W display can be added if remote rate/total reading is desired, or an AO55W if a (4-20 mA) analog signal is required. (High-frequency pulse rate is required for use with most Seametrics controllers.)

The AG2000 is secured with a seal wire to protect against unauthorized access. The seal can be broken by an authorized agent, to change units of measure, replace the battery pack, or to field-install an optional power/output cable. The cable can be factory or field-installed where external power is available and/or pulse output is needed. An accessory weather guard is available for additional protection in outdoor applications.

For chemigation applications, the chemical injection point must be placed downstream of the meter **OR** far enough upstream for **complete mixing** to occur before the flow reaches the meter. (See tech bulletin on Seametrics' website, [www.seametrics.com](http://www.seametrics.com)).

<b>Power</b>	1 battery pack that contains 2 Lithium 3.6V "D" batteries, replaceable. Standard battery life 2.5 years 5 years with extended battery life (EBL) option With external power option (uses 8-32 Vdc, 30 mA), Lithium batteries serve as backup in power failure (10 year life)						
<b>Pulse Output (with optional cable)</b>	<b>Signal</b>	Current sinking pulse, opto-isolated, 30 Vdc at 10 mA max					
	<b>Pulse Rates</b>	High Frequency; 10 units/pulse; 100 units/pulse; 1000 units/pulse					
	<b>High Frequency (pulse/gal)</b>	<b>3"</b>	<b>4"</b>	<b>6"</b>	<b>8"</b>	<b>10"</b>	<b>12"</b>
		25.228	16.362	6.307	3.344	2.15	1.530
<b>Conductivity</b>	>20 microSiemens/cm						
<b>Empty Pipe Detection</b>	Hardware/software, conductivity-based						
<b>Environmental</b>	NEMA 4X Standard (IP68 Option)						

\*Specifications subject to change. Please consult our website for the most current data ([www.seametrics.com](http://www.seametrics.com)).

\*\*Extended battery life option is standard on all IP68 meters.

## OUTPUT CAPABILITIES

		Acre Inch = <b>AI</b>																																			
	*-300 available in IP68 only	<sup>1</sup> Extended battery life is standard on all IP68 meters	*Units = Gal or Liter depending on Rate/Total unit selection **High Frequency pulse rate will shorten battery life	Consult factory for additional units Any rate selection can be combined with any total selection ** 1 Miner's Inch = 1.2 CFM																																	

### ACCESSORIES

Remote 4-20 mA (analog) signal = **AO55W**

Remote Rate and Total Indicator (Battery) = **FT415W\***

Remote Rate and Total Indicator (Powered) = **FT420W\***

Remote Data Logger = **DL76W**

Dual Power Supply, 115 Vac, 12/24 Vdc = **PC42**

(Use with High Frequency pulse rate)

Replacement Battery Pack = 100889

Weather Guard = **100961**

Post-Factory 20-ft. Power/Output Cable (Standard Housing Only) = **DC30**

Post-Factory 50-ft. Power/Output Cable (Standard Housing Only) = **DC35**

Post-Factory 20-ft. Power/Output Cable (IP68 Housing Only) = **DC30S**

Post-Factory 50-ft. Power/Output Cable (IP68 Housing Only) = **DC35S**

Grounding Rings (not needed for most applications):

3" = **102157**

4" = **100876**

6" = **100877**

8" = **100878**

10" = **100879**

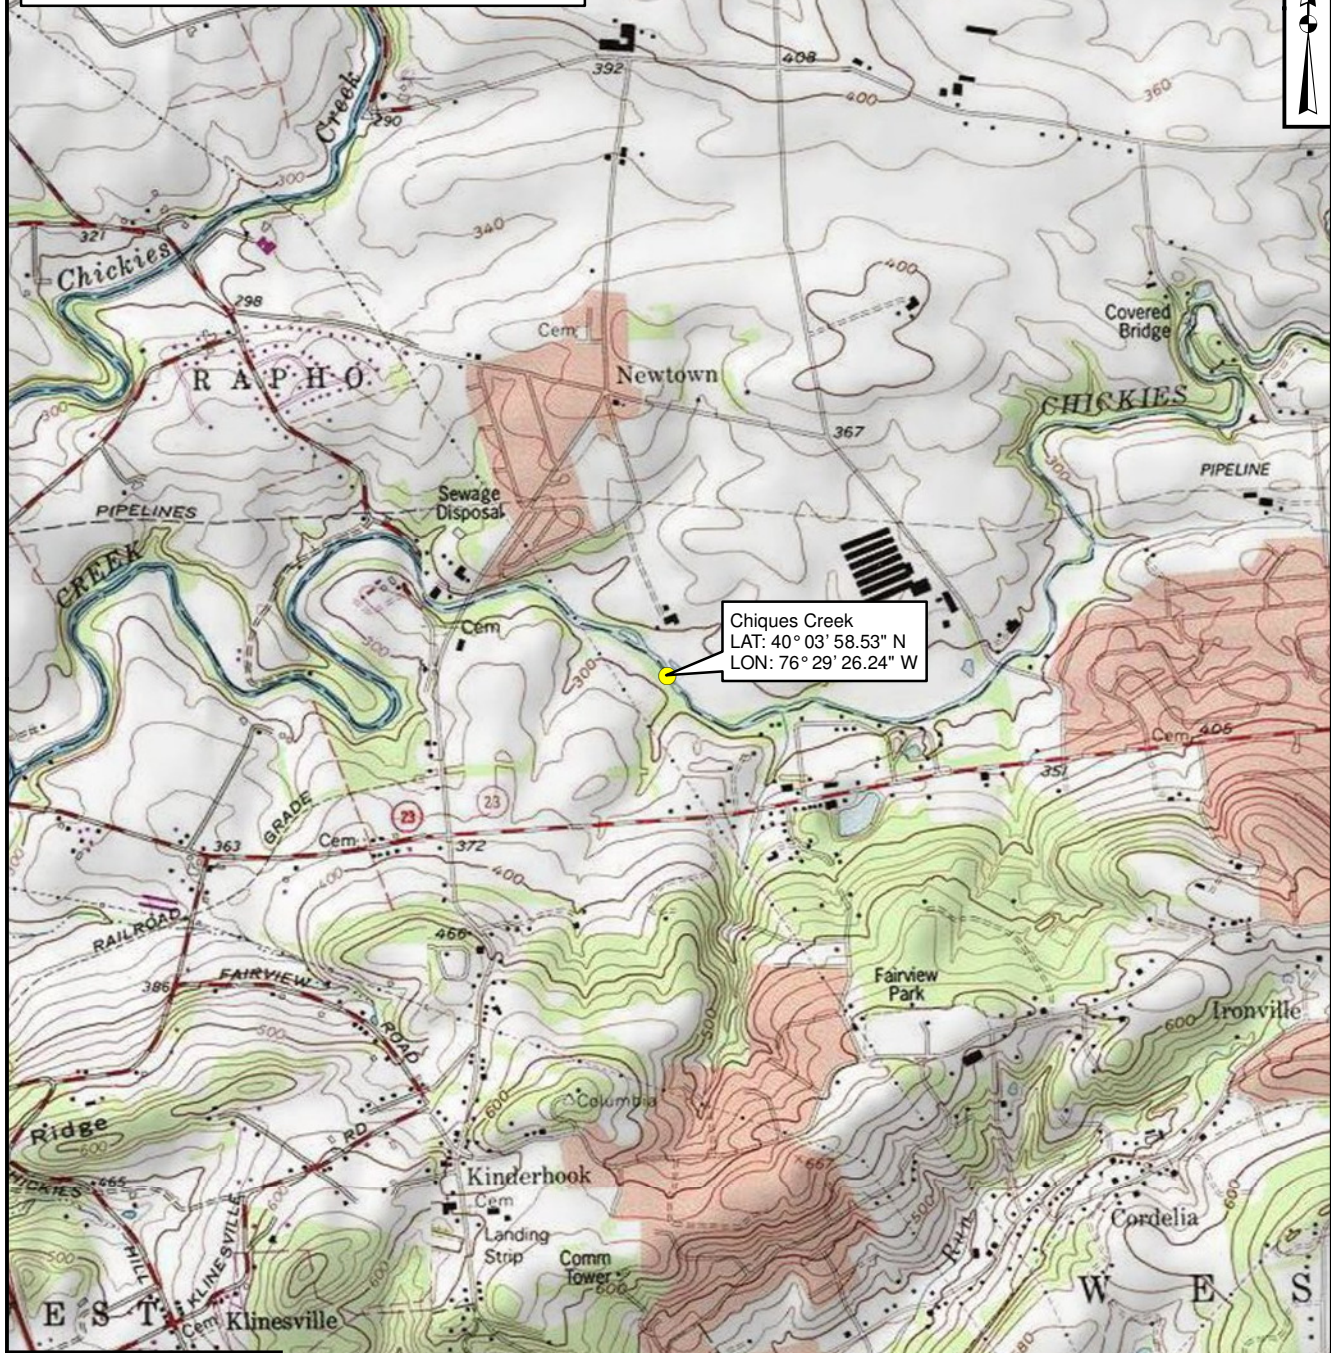

12" = **103288**

\*Consult customer service to determine the appropriate indicator based on the distance it will be installed from the meter.
