Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/07/17	0.33	W031, W031A	1.00

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
T. Malecki, M. Groomer	41.74408	-78.426119	WD078TMM, PFO and PEM wetland

General Comments: Large PEM and PFO wetland complex. Two ephemeral streams occur within the PEM wetland. PFO wetland located on forested hilltop and is fed by multiple seeps that drain into stream at headwaters. PFO wetland occurs in existing pipeline ROW (0.15 acres in ECL) and continues upslope of Project (1.98 acres delineated) beyond ECL. PEM wetland occurs within maintained pipeline ROW (0.18 acres in ECL) and continues downslope of Project (0.10 acres delineated) beyond ECL. Impacts occur within both the PEM and PFO wetland. AA includes 0.33 acres of the proposed impacted area to PEM and PFO wetland, and 0.67 acres of the wetland complex that will not be impacted.

1. Wetland Zone of Influence Condition Index

1. Wetland Zone of Influence Condition Index																																							
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																																						
	Optimal					Suboptimal					Marginal					Poor																							
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.								
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																			
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.													Total Score = SUM(%Areas*Scores)																										
2. Estimate the % area within each condition category. Calculators are provided for you below.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/06/17	0.07	W035	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.754615	-78.398383	WD071TMM, PSS and PEM wetland		

General Comments: Large PEM and PSS wetland complex. Two streams occur within the wetland complex. PSS wetlands located within relic slough within floodplain of stream. The PSS wetland (W035) occurs within maintained pipeline ROW (0.05 acres in ECL) and continues upslope of Project (3.30 acres delineated) beyond ECL. The PEM wetland occurs within an access road (0.02 acres in ECL) and continues upslope of Project (1.11 acres delineated) beyond ECL. Impacts occur within both the PEM and PSS wetlands. AA includes 0.07 acres of the proposed impacted area to PEM and PSS wetlands, and 0.93 acres of the wetland complex that will not be impacted.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20														
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																		
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.				<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1														
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below. Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/06/17	0.17	W037B, W037C	1.00
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.753999	-78.394842	RW068CJLM, PEM and PSS wetlands	
General Comments: Seasonal wet back channel to Potato Creek. PEM and PSS wetland in maintained pipeline ROW (0.17 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (2.28 acres delineated) beyond ECL. Impacts occur only to the PEM and PSS wetland area in the disturbed ROW. AA includes 1.00 acre of PEM and PSS within and beyond the Project area.					

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1															
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.																	Total Score = SUM(%Areas*Scores)																		
2. Estimate the % area within each condition category. Calculators are provided for you below.																																			
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																			
Condition Category:																																			
Scoring:	% ZOI Area:	0%					0%					25%					25%					50%					5%					Total Score:			
	Score:	0					0					13					7					4					1								
	Total Sub-score:	0.00					0.00					3.25					1.75					2.00					0.05						7.05		
Comments: Area includes maintained pipeline ROW with access road/ATV trail, other wetlands, a stream, agricultural pasture, and a paved road. Adjacent forest has maintained understory.																																			

0.35

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories																CI = Total Score/20																							
	Optimal					Suboptimal					Marginal					Poor																								
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Pennsylvania Department of Environmental Protection

Roadbed Worksheet

Project Name / Identifier			Date	Name(s) of Evaluator(s)
NFG FM100 Project			10/06/17	J. Miner, C. Maier, M. Groomer
Resource Identifier	AA #	Lat (dd)	Long (dd)	Notes:
RW068CJLM	W037B, W037C	41.753999	-78.394842	Pipeline access road/ATV trail

Roadbeds: Record the number of occurrences by roadbed type and distance category. Multiply the number of occurrences by the weighting factors for each roadbed type and distance category then sum the total score for each distance category. The total scores for each distance category are then compared to the condition category descriptions.

Roadbed Type	Distance	Occurrences	Weighting Factor	Score	Distance	Occurrences	Weighting Factor	Score
≥ 4 Lane Paved	0-100 ft.		4	0	100-300 ft.		4	0
2 Lane Paved	0-100 ft.		2	0	100-300 ft.	1	2	2
1 Lane Paved	0-100 ft.		1	0	100-300 ft.		1	0
Gravel Road	0-100 ft.		1	0	100-300 ft.		1	0
Dirt Road	0-100 ft.	1	2	2	100-300 ft.	1	2	2
Railroad	0-100 ft.		2	0	100-300 ft.		2	0
Other Roadbeds	0-100 ft.		1, 2 or 4	0	100-300 ft.		1, 2 or 4	0
Total Scores:	0-100 ft.	2			100-300 ft.	4		

Road Comments: Unimproved access road/ATV trail used for pipeline inspection and maintenance. Not an improved road, no gravel, no grading. Paved road within 300 feet of AA.

Maintained pipeline ROW and maintenance road/ATV trail.

4. Hydrologic Modification Index

Hydrologic Modification Stressor Presence	Condition Category														
	Optimal					Suboptimal					Marginal				
	High Optimal: No hydrologic stressors present within the AA boundary.					High Suboptimal: Two hydrologic stressors present within the AA boundary.					High Marginal: Four hydrologic stressors present within the AA boundary.				
	Low Optimal: One hydrologic stressor present within the AA boundary.					Low Suboptimal: Three hydrologic stressors present within the AA boundary.					Low Marginal: Five hydrologic stressors present within the AA boundary.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6
													5	4	3
													2	1	
Comments:											Score: 17				
											0.85				

Comments: Within ROW alteration caused by pipeline maintenance and ATV use.

5. Sediment Stressor Index

Sediment Stressor Presence	Condition Category														
	Optimal					Suboptimal					Marginal				
	High Optimal: No sediment stressors present within the AA boundary.					High Suboptimal: Two sediment stressors present within the AA boundary.					High Marginal: Four sediment stressors present within the AA boundary.				
	Low Optimal: One sediment stressor present within the AA boundary.					Low Suboptimal: Three sediment stressors present within the AA boundary.					Low Marginal: Five sediment stressors present within the AA boundary.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6
													5	4	3
													2	1	
Comments:											Score: 14				
											0.70				

Comments: Two stressors identified due to ROW maintenance, ATV use, and cleared area for gas well pad.

6. Water Quality Stressor Index

a. Eutrophication Stressor Presence	Condition Category														
	Optimal					Suboptimal					Marginal				
	No eutrophication stressors present within the AA boundary.					One eutrophication stressors present within the AA boundary.					Two eutrophication stressors present within the AA boundary.				
											Three eutrophication stressors present within the AA boundary.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6
													5	4	3
													2	1	

Comments: No stressors identified.

b. Contaminant / Toxicity Stressor Presence	Condition Category														
	Optimal					Suboptimal					Marginal				
	No contaminant / toxicity stressors present within the AA boundary.					One contaminant / toxicity stressors present within the AA boundary.					Two contaminant / toxicity stressors present within the AA boundary.				
											Three contaminant / toxicity stressors present within the AA boundary.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/06/17	0.01	W041	0.32
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.754799	-78.3941	WD068JLM, PEM wetland	

General Comments: Seasonal wet back channel to Potato Creek. PEM wetland in maintained pipeline ROW (0.001 acres in ECL). Wetland continues beyond existing ROW, upslope of Project (0.31 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.32 acre of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index																				
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category										CI = Total Score/20									
	Optimal		Suboptimal		Marginal		Poor													
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.		<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.		<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.							
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.											Total Score = SUM(%Areas*Scores)									
Scoring:	Condition Category:																		Total Score:	
	% ZOI Area:		0%		0%		25%		25%		30%		20%							
	Score:		0		0		13		7		4		1							
	Total Sub-score:		0.00		0.00		3.25		1.75		1.20		0.20		6.40					
0.32																				

Comments: Area includes maintained pipeline ROW with access road/ATV trail, other wetlands, a stream, agricultural pasture, development, and a paved road. Adjacent forest has maintained understory.

2. Roadbed Presence Index																				
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories										CI = Total Score/20									
	Optimal		Suboptimal		Marginal		Poor													
	<u>High Optimal:</u> No roadbeds present within 100 feet of the AA boundary <u>Low Optimal:</u> Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.		<u>High Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.		<u>Low Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.		<u>High Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.		<u>Low Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.		<u>High Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.		<u>Low Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.							
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1

Comments: Pipeline ROW maintenance road, two-track, vegetated, with rutting.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/06/17	0.01	W042	0.02

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
J. Miner, C. Maier, M. Groomer	41.754463	-78.393417	WD070JLM, PEM wetland

General Comments: Small depression within a dirt road, intercepting drainage. Disturbed, base soil present due to disturbances. PEM wetland in maintained pipeline ROW (0.01 acres in ECL). Wetland continues beyond existing ROW, upslope of Project (0.01 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.02 acre of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Condition Category																																		
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																		
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/07/17	0.01	W049	0.03
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.757017	-78.379114	RW073DJLM, PEM wetland	
General Comments: Small seep under forest canopy and in ROW. Hillside slumps, seep forms a narrow wet swale. PEM wetland in maintained pipeline ROW (0.001 acres in ECL). Wetland continues beyond existing ROW, upslope of Project (0.02 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.03 acres of PEM within and beyond the Project area.					

1. Wetland Zone of Influence Condition Index																							
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																						
	Optimal					Suboptimal			Marginal			Poor											
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.			Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.		
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1			
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.												Total Score = SUM(%Areas*Scores)											
Scoring:	Condition Category:																		Total Score:				
	% ZOI Area:		0%		0%		70%		0%		30%		0%										
	Score:		0		0		13		0		4		0										
	Total Sub-score:		0.00		0.00		9.10		0.00		1.20		0.00		10.30								
Comments: Area includes maintained pipeline ROW with access road/ATV trail and other wetlands. Adjacent forest has maintained understory.																							

2. Roadbed Presence Index																							
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories																						
	Optimal					Suboptimal			Marginal			Poor											
	High Optimal: No roadbeds present within 100 feet of the AA boundary Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.			Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.			High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.			Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.			High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12. Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/07/17	0.29	W051	0.56

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
J. Miner, C. Maier, M. Groomer	41.757017	-78.379114	RW073EJLM, PEM wetland

General Comments: Small seep under forest canopy and in ROW. Hillside slumps, seep forms a narrow wet swale. PEM wetland in maintained pipeline ROW (0.29 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (0.27 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.56 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/07/17	0.05	W054	0.07
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.756895	-78.374947	WD075JLM, PEM wetland	

General Comments: Wetland connected to perennial stream and within floodplain. PEM wetland in maintained pipeline ROW (0.05 acres in ECL). Wetland continues beyond existing ROW, downslope of Project (0.02 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.07 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index																				
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category												CI = Total Score/20							
	Optimal		Suboptimal		Marginal		Poor													
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.		<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.		<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.							
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)							
Scoring:	Condition Category:																Total Score:			
	% ZOI Area:		0%		0%		50%		5%		40%		5%							
	Score:		0		0		13		7		4		1							
	Total Sub-score:		0.00		0.00		6.50		0.35		1.60		0.05		8.50		0.43			

Comments: Area includes maintained pipeline ROW with access road/ATV trail, other wetlands, streams, and residential development. Adjacent forest has maintained understory.

2. Roadbed Presence Index																				
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories												CI = Total Score/20							
	Optimal		Suboptimal		Marginal		Poor													
	<u>High Optimal:</u> No roadbeds present within 100 feet of the AA boundary <u>Low Optimal:</u> Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.		<u>High Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.		<u>Low Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.		<u>High Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.		<u>Low Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.		<u>High Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.		<u>Low Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.							
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1

Comments: Pipeline ROW maintenance road, two-track, vegetated, with rutting.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/07/17	0.15	W055	0.46	

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
T. Malecki, M. Groomer	41.757137	-78.372617	WD074TMM, PEM wetland

General Comments: PEM wetland connected to perennial stream. Wetland occurs in maintained pipeline ROW (0.01 acres in ECL), continues upslope and downslope of Project (0.31 acres delineated) beyond ECL. AA includes entire 0.46 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

1. Wetland Zone of Influence Condition Index																																			
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/07/17	0.01	W056	0.02	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.757105	-78.372081	WD074TMM, PEM wetland		

General Comments: PEM wetland located between gas compressor station and perennial stream. Wetland occurs in maintained pipeline ROW (0.001 acres in ECL), continues upslope of Project (0.01 acres delineated) beyond ECL. AA includes entire 0.02 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																			CI = Total Score/20									
	Optimal					Suboptimal					Marginal					Poor													
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.											
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1									
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)																
Scoring:	Condition Category:

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/03/18	0.57	W061	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, M. Groomer		41.758834	-78.341033	WD209JLM, PEM wetland		

General Comments: PEM wetland in maintained pipeline ROW (0.57 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (0.50 acres delineated) beyond ECL. Connected to PFO wetland downslope of the Project (0.85 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 1.00 acre of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

	Condition Category															CI = Total Score/20																					
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal						Poor																				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.						High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																	
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below. Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/02/17	0.45	W066A	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, F. Davis, M. Groomer		41.760518	-78.337248	WD038JLM, PEM and PFO wetland		

General Comments: Small depressions on hilltop. Relatively indistinct and isolated depression/flat on hilltop. Wetland is disturbed in ROW by compaction and extends into forest. PEM wetland in maintained pipeline ROW (0.45 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (1.63 acres delineated) beyond ECL. In between and connected to two PFO wetlands upslope and downslope of the Project (1.16 acres delineated) beyond ECL. Impacts occur only to the PEM and PFO wetland area in the disturbed ROW. AA includes 0.59 acres of PEM and PFO within the Project area and 0.41 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.						High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

3. Vegetation Condition Index

a. Invasive Species Presence	Condition Category														
	Optimal					Suboptimal					Marginal				
	High Optimal: No invasives present.					High Suboptimal: <5% of the total AA contains invasive species.					High Marginal: >30% but less than 50% of the total AA contains invasive species.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6

Comments: No Invasive Species identified in wetland AA.

b. Vegetation Stressor Presence	Condition Category														
	Optimal					Suboptimal					Marginal				
	High Optimal: No vegetation stressors present within the AA boundary.					High Suboptimal: Two vegetation stressors present within the AA boundary.					High Marginal: Four vegetation stressors present within the AA boundary.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6

Comments: Maintained pipeline ROW and maintenance road/ATV trail.

a. Invasive Sub-Score:	20	Total Score
b. Vegetation Sub-Score:	12	32

0.80

4. Hydrologic Modification Index

Hydrologic Modification Stressor Presence	Condition Category														
	Optimal					Suboptimal					Marginal				
	High Optimal: No hydrologic stressors present within the AA boundary.					High Suboptimal: Two hydrologic stressors present within the AA boundary.					High Marginal: Four hydrologic stressors present within the AA boundary.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6

Comments: Within ROW alteration caused by pipeline maintenance and ATV use.

Score:	17

0.85

5. Sediment Stressor Index

Sediment Stressor Presence	Condition Category														
	Optimal					Suboptimal					Marginal				
	High Optimal: No sediment stressors present within the AA boundary.					High Suboptimal: Two sediment stressors present within the AA boundary.					High Marginal: Four sediment stressors present within the AA boundary.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6

Comments: One stressor identified due to ROW maintenance and ATV use.

Score:	17

0.85

6. Water Quality Stressor Index

a. Eutrophication Stressor Presence	Condition Category														
	Optimal					Suboptimal					Marginal				
	No eutrophication stressors present within the AA boundary.					One eutrophication stressors present within the AA boundary.					Two eutrophication stressors present within the AA boundary.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6

Comments: No stressors identified.

b. Contaminant / Toxicity Stressor Presence	Condition Category														
	Optimal					Suboptimal					Marginal				
	No contaminant / toxicity stressors present within the AA boundary.					One contaminant / toxicity stressors present within the AA boundary.					Two contaminant / toxicity stressors present within the AA boundary.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6

Comments: No stressors identified.

Road Comments: Unimproved access road/ATV trail used for pipeline inspection and maintenance. Not an improved road, no gravel, no grading.

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002) Pennsylvania Department of Environmental Protection STRESSOR WORKSHEET		10/02/17	
		Occurrence in AA	
		Y	#s N
Vegetation Alteration			
Mowing	X		
Moderate livestock grazing (within one year)			X
Crops (annual row crops, within one year)			X
Selective tree harvesting/cutting (>50% removal, within 5 years)			X
Right-of-way clearing (mechanical or chemical)	X	1	
Clear cutting or Brush cutting (mechanized removal of shrubs and saplings)	X		
Removal of woody debris			X
Aquatic weed control (mechanical or herbicide)			X
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)			X
Plantation (conversion from typical natural tree species, including orchards)			X
Other:			X
Total Number:		3	
Hydrologic Modification			
Ditching, tile draining, or other dewatering methods			X
Dike/weir/dam			X
Filling/grading			X
Dredging/excavation			X
Stormwater inputs (culvert or similar concentrated urban runoff)			X
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)	X		
Dead or dying trees (trunks still standing) *			X
Stream alteration (channelization or incision)			X
Other:			X
Total Number:		1	
Sedimentation			
Sediment deposits/plumes			X
Eroding banks/slopes			X
Active construction (earth disturbance for development)			X
Active plowing (plowing for crop planting in past year)			X
Intensive livestock grazing (in one year, ground is >50% bare)			X
Active selective forestry harvesting (within one year)			X
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)			X
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)			X
Other:	X		
Total Number:		1	
Eutrophication			
Direct discharges from agricultural feedlots, manure pits, etc.			X
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.			X
Heavy or moderately heavy formation of algal mats			X
Other:			X
Total Number:		0	
Contaminant/Toxicity			
Severe vegetation stress (source unknown or suspected)			X
Obvious spills, discharges, plumes, odors, etc.			X
Acidic drainages (mined sites, quarries, road cuts)			X
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites			X
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)			X
Fish or wildlife kills or obvious disease or abnormalities observed			X
Excessive garbage/dumping			X
Other:			X
Total Number:		0

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/02/17	0.02	W070	0.06	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.766956	-78.314731	WD048TMM, PEM wetland		
General Comments: PEM wetland located in floodplain and abutts stream. Wetland occurs in maintained pipeline ROW (0.02 acres in ECL) and continues downslope of Project (0.04 acres delineated) beyond ECL. AA includes entire 0.06 acres of the PEM wetland.						

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																Total Score = SUM(%Areas*Scores)																				
Scoring:	Condition Category:																						Total Score:

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.01	W075	0.29	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.787011	-78.272842	WD061TMM, PEM wetland		

General Comments: PEM wetland located in inactive agricultural field at toe of slope between terraced field and drains into an ephemeral stream. Wetland occurs in recently mowed site (0.01 acres in ECL) and continues upslope of Project (0.28 acres delineated) beyond ECL. AA includes entire 0.29 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																		CI = Total Score/20																	
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.03	W076	0.05	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.787781	-78.271437	WD062TMM, PEM wetland		

General Comments: PEM wetland located in floodplain. Adjacent to W077, forest with maintained understory, and in active agricultural field. Wetland occurs in inactive agricultural field and on edge of forest (0.03 acres in ECL) and continues upslope of Project (0.02 acres delineated) beyond ECL. AA includes entire 0.05 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/05/17	0.06	W077	0.45
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.787608	-78.271007	WD062TMM, PSS/PEM wetland	

General Comments: PSS/PEM wetland located in floodplain. Wetland has man-made features influencing it including culvert and artificial bed and bank features. Adjacent to W076, forest with maintained understory, and in active agricultural field. Wetland occurs in inactive agricultural field and on edge of forest (0.03 acres in ECL) and continues upslope of Project (0.02 acres delineated) beyond ECL. AA includes entire 0.05 acres of the PSS/PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20								
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor												
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.01	W078	0.08	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.788483	-78.270692	WD064TMM, PEM wetland		

General Comments: PEM wetland located in floodplain of perennial stream. Adjacent to W077 and W080. Wetland occurs on edge of maintained pipeline ROW and forest with maintained understory (0.01 acres in ECL) and continues upslope of Project (0.08 acres delineated) beyond ECL. AA includes entire 0.08 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																			CI = Total Score/20	
	Optimal					Suboptimal					Marginal					Poor					
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.			
	SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3		2
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)								
Condition Category:																					
Scoring:	% ZOI Area:	0%				0%		60%			0%			20%			20%		Total Score:		
	Score:	0				0		12			0			4			1				
	Total Sub-score:	0.00				0.00		7.20			0.00			0.80			0.20		8.20		0.41

Comments: Area includes stream, other wetlands, and inactive agricultural field. Adjacent forest has maintained understory. Highway, railroad, and development within 300 feet of AA.

2. Roadbed Presence Index

		Condition Categories																				
		Optimal					Suboptimal					Marginal					Poor					
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)		<u>High Optimal:</u> No roadbeds present within 100 feet of the AA boundary		<u>Low Optimal:</u> Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.			<u>High Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.		<u>Low Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.			<u>High Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.			<u>Low Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.			<u>High Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.		<u>Low Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.		
	SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	

Comments: No roadbeds present within 0-100 feet of AA.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/05/17	0.01	W080, Pond 07	0.16
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.788357	-78.270172	WD064TMM, PEM wetland and Pond 07	

General Comments: PEM wetland located in floodplain between perennial stream and railroad tracks. Intermittent stream runs through wetland and connects to perennial stream and pond. Beaver activity present creating pond. Pond takes up about 25 percent of the wetland. Wetland adjacent to W078, W079, W081, and W082. Wetland and pond occur on edge of maintained pipeline ROW and forest with maintained understory (0.01 acres in ECL) and continues downslope of Project (0.15 acres delineated) beyond ECL. AA includes 0.16 acres of the PEM wetland and pond.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1															
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.																	Total Score = SUM(%Areas*Scores)																		
2. Estimate the % area within each condition category. Calculators are provided for you below.																																			
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																			
Condition Category:																																			
Scoring:	% ZOI Area:	0%					0%					50%					0%					20%					30%					Total Score:			
	Score:	0					0					12					0					4					1								
	Total Sub-score:	0.00					0.00					6.00					0.00					0.80					0.30						7.10		
Comments: Area includes streams, other wetlands, and maintained pipeline ROW. Adjacent forest has maintained understory. Highway, railroad, and development within 300 feet of AA.																																			

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories																CI = Total Score/20															
	Optimal				Suboptimal				Marginal				Poor																			
	High Optimal: No roadbeds present within 100 feet of the AA boundary				Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.				High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.				Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.				High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.				Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.				High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.				Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1												
Comments: Railroad within 100 feet of AA.																																

b. Roadbed Presence (within 100 - 300 foot Wetland ZOI distance)	Condition Categories																CI = Total Score/20															
	Optimal				Suboptimal				Marginal				Poor																			
	High Optimal: No roadbeds present within 100 - 300 feet of the AA boundary				Low Optimal: Roadbed presence score within 100 - 300 feet of the AA boundary equal to or less than 2.				High Suboptimal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 2 but equal to or less than 4.				Low Suboptimal: Roadbed presence score within 100 - 300 feet AA boundary is greater than 4 but less than or equal to 6.				High Marginal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 6 but less than or equal to 8.				Low Marginal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 8 but less than or equal to 10.				High Poor: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 10 but less than or equal to 12.				Low Poor: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 12.

Pennsylvania Department of Environmental Protection

Roadbed Worksheet

Project Name / Identifier			Date	Name(s) of Evaluator(s)
NFG FM100 Project			10/05/17	T. Malecki, M. Groomer
Resource Identifier	AA #	Lat (dd)	Long (dd)	Notes:
WD064TMM	W080, Pond 07	41.788357	-78.270172	

Roadbeds: Record the number of occurrences by roadbed type and distance category. Multiply the number of occurrences by the weighting factors for each roadbed type and distance category then sum the total score for each distance category. The total scores for each distance category are then compared to the condition category descriptions.

Roadbed Type	Distance	Occurrences	Weighting Factor	Score	Distance	Occurrences	Weighting Factor	Score
≥ 4 Lane Paved	0-100 ft.		4	0	100-300 ft.		4	0
2 Lane Paved	0-100 ft.		2	0	100-300 ft.	1	2	2
1 Lane Paved	0-100 ft.		1	0	100-300 ft.		1	0
Gravel Road	0-100 ft.		1	0	100-300 ft.	1	1	1

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.13	W083	0.16	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.790866	-78.266353	WD066JLM, PEM wetland		

General Comments: Wetland located within the swale adjacent to stream. Seeps contribute to intermittent channel. Site impacted by hoof shearing and cattle grazing, creating micro hummocks/tussocks. PEM wetland in grazed pasture (0.13 acres in ECL). Impacts occur only to the PEM wetland area in the Project area. AA includes entire 0.16 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence Condition Index																				CI = Total Score/20																
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																																			
	Optimal					Suboptimal					Marginal					Poor																				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.01	W082	0.15	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.788754	-78.269234	WD065TMM, PEM wetland		

General Comments: PEM wetland located in meadow at toe of slope, and is connected to a ditch (0.01 acres in ECL). Impacts occur only to the wetland area in the Project area. AA includes entire 0.15 acre of PEM wetland. Wetland delineated as 0.15 acres and impacts are 0.000351 acres (impact size rounded up for form).

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																				CI = Total Score/20																		
	Optimal					Suboptimal					Marginal					Poor																							
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.						Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.							
SCORE					20 19 18 17 16					15 14 13 12 11					10 9 8 7 6					5 4 3 2 1																			
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.															Total Score = SUM(%Areas*Scores)																								
2. Estimate the % area within each condition category. Calculators are provided for you below.																																							
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.10	W086	0.10	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.792551	-78.264545	WD066JLM, PEM wetland		

General Comments: PEM wetland in grazed pasture and is connected to ephemeral stream (0.10 acres in ECL). Impacts occur only to the wetland area in the Project area. AA includes entire 0.10 acre of PEM wetland. Wetland delineated as 0.07 acres and impacts are 0.06 acres (impact size and AA size rounded for form).

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20							
	Optimal					Suboptimal			Marginal			Poor											
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1			
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. 		Occurrence in AA		
		Y	#'s	N
Vegetation Alteration				
Mowing	X			
Moderate livestock grazing (within one year)	X			
Crops (annual row crops, within one year)				X
Selective tree harvesting/cutting (>50% removal, within 5 years)				X
Right-of-way clearing (mechanical or chemical)	X	1		
Clear cutting or Brush cutting (mechanized removal of shrubs and saplings)	X			
Removal of woody debris				X
Aquatic weed control (mechanical or herbicide)				X
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)				X
Plantation (conversion from typical natural tree species, including orchards)				X
Other:				X
Total Number:		4		
Hydrologic Modification				
Ditching, tile draining, or other dewatering methods				X
Dike/weir/dam				X
Filling/grading				X
Dredging/excavation				X
Stormwater inputs (culvert or similar concentrated urban runoff)	X	1		
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)	X			
Dead or dying trees (trunks still standing) *				X
Stream alteration (channelization or incision)				X
Other:				X
Total Number:		2		
Sedimentation				
Sediment deposits/plumes				X
Eroding banks/slopes				X
Active construction (earth disturbance for development)				X
Active plowing (plowing for crop planting in past year)				X
Intensive livestock grazing (in one year, ground is >50% bare)				X
Active selective forestry harvesting (within one year)				X
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)				X
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)				X
Other:	X			
Total Number:		1		
Eutrophication				
Direct discharges from agricultural feedlots, manure pits, etc.				X
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.				X
Heavy or moderately heavy formation of algal mats				X
Other:				X
Total Number:		0		
Contaminant/Toxicity				
Severe vegetation stress (source unknown or suspected)				X
Obvious spills, discharges, plumes, odors, etc.				X
Acidic drainages (mined sites, quarries, road cuts)				X
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites				X
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)				X
Fish or wildlife kills or obvious disease or abnormalities observed				X
Excessive garbage/dumping				X
Other:				X
Total Number:		0		
* Dead or dying trees attributed to beaver activity or emerald ash borer (or other identifiable insect infestation) should not be recorded as a stressor present. The assessor is responsible for recording observations in the comment section concerning presence of these conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.80	W091	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.795333	-78.254476	WD058JLM, PSS wetland		

General Comments: Large PSS wetland in a backwater of the Allegheny River. Forested areas occur outside of the plot. PSS located 0.80 acres in ECL and continues downslope of Project (4.2 acres delineated) beyond ECL. Impacts occur only to the PSS wetland area in the Project area. AA includes 0.80 acres of PSS within and 0.20 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index

	Condition Category															CI = Total Score/20																					
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal						Poor																				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.						High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1

J. Miner, C. Maier, M. Groomer		41.795924	-78.255239	WD058JLM, PEM wetland		

General Comments: PEM wetland in a backwater of the Algheny River. Forested areas occur outside of the plot and connected to PSS wetland. PEM wetland in maintained pipeline ROW (0.38 acres in ECL) and continues upslope of Project (0.42 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.38 acres of PEM within and 0.42 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20						
	Optimal					Suboptimal			Marginal			Poor										
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understorey.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understorey.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understorey.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	09/30/17	0.01	W096	0.03	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.811266	-78.205338	WD041TMM, PEM wetland		

General Comments: Intermittent stream drains into wetland. Wetland adjacent to perennial stream. PEM wetland located in existing pipeline ROW at valley bottom (0.004 acres in ECL) and continues upslope of Project (0.02 acres delineated) beyond ECL. AA includes entire 0.03 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																			CI = Total Score/20	
	Optimal					Suboptimal					Marginal					Poor					
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.			Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.												Total Score = SUM(%Areas*Scores)									
Scoring:	Condition Category:																			Total Score:	
	% ZOI Area:		0%		0%		30%		0%		60%			10%							
	Score:		0		0		12		0		4			1							
	Total Sub-score:		0.00		0.00		3.60		0.00		2.40			0.10			6.10				
																				0.31	

Comments: Area includes streams, maintained pipeline ROW, and clearcut forested area. Remainder of adjacent forest has maintained understory.

2. Roadbed Presence Index

	Condition Categories																			
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal					Poor				
	High Optimal: No roadbeds present within 100 feet of the AA boundary		Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.			High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.		Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.			High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.		Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.			High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.		Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

		Occurrence in AA		
		Y	#s	N
Vegetation Alteration				
Mowing	X			
Moderate livestock grazing (within one year)	X			
Crops (annual row crops, within one year)				X
Selective tree harvesting/cutting (>50% removal, within 5 years)				X
Right-of-way clearing (mechanical or chemical)				X
Clear cutting or Brush cutting (mechanized removal of shrubs and saplings)				X
Removal of woody debris				X
Aquatic weed control (mechanical or herbicide)				X
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)				X
Plantation (conversion from typical natural tree species, including orchards)				X
Other:				X
Total Number:		2		
Hydrologic Modification				
Ditching, tile draining, or other dewatering methods				X
Dike/weir/dam				X
Filling/grading				X
Dredging/excavation				X
Stormwater inputs (culvert or similar concentrated urban runoff)				X
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)				X
Dead or dying trees (trunks still standing) *				X
Stream alteration (channelization or incision)				X
Other:	X			
Total Number:		1		
Sedimentation				
Sediment deposits/plumes				X
Eroding banks/slopes				X
Active construction (earth disturbance for development)				X
Active plowing (plowing for crop planting in past year)				X
Intensive livestock grazing (in one year, ground is >50% bare)				X
Active selective forestry harvesting (within one year)				X
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)				X
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)				X
Other:	X			
Total Number:		1		
Eutrophication				
Direct discharges from agricultural feedlots, manure pits, etc.				X
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.				X
Heavy or moderately heavy formation of algal mats				X
Other:				X
Total Number:		0		
Contaminant/Toxicity				
Severe vegetation stress (source unknown or suspected)				X
Obvious spills, discharges, plumes, odors, etc.				X
Acidic drainages (mined sites, quarries, road cuts)				X
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites				X
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)				X
Fish or wildlife kills or obvious disease or abnormalities observed				X
Excessive garbage/dumping				X
Other:				X
Total Number:		0

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	09/29/17	0.04	W112	0.08	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.883906	-77.955779	WD032TMM, PEM wetland		

General Comments: PEM wetland located on hillside in depression within existing ROW. Wetland is adjacent but not connected to W113 and W114. Wetland occurs in maintained pipeline ROW (0.04 acres in ECL) and continues downslope of Project (0.04 acres delineated) beyond ECL. AA includes entire 0.08 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

		Condition Category															CI = Total Score/20													
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal	Suboptimal					Marginal					Poor																		
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.	<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.	<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.	<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.	<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.	<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.	<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Project Name / Identifier			Date	Name(s) of Evaluator(s)				
NFG FM100 Project			09/29/17	T. Malecki, M. Groomer				
Resource Identifier	AA #	Lat (dd)	Long (dd)	Notes:				
WD032TMM	W112	41.883906	-77.955779					
Roadbeds: Record the number of occurrences by roadbed type and distance category. Multiply the number of occurrences by the weighting factors for each roadbed type and distance category then sum the total score for each distance category. The total scores for each distance category are then compared to the condition category descriptions.								
Roadbed Type	Distance	Occurrences	Weighting Factor	Score	Distance	Occurrences	Weighting Factor	Score
≥ 4 Lane Paved	0-100 ft.		4	0	100-300 ft.		4	0
2 Lane Paved	0-100 ft.		2	0	100-300 ft.		2	0
1 Lane Paved	0-100 ft.		1	0	100-300 ft.		1	0
Gravel Road	0-100 ft.		1	0	100-300 ft.		1	0

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	09/29/17	0.05	W114	0.14
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.884082	-77.95518	WD032TMM, PEM wetland	

General Comments: PEM wetland located on hillside in depression within existing ROW. Wetland is adjacent but not connected to W112 and W113. Wetland occurs in maintained pipeline ROW (0.05 acres in ECL) and continues downslope of Project (0.09 acres delineated) beyond ECL. AA includes entire 0.14 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																		CI = Total Score/20							
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor										
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.									
	SCORE					20	19	18	17	16	15	14	13	12	11	10	9	8		7	6	5	4	3	2	1
	1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.												Total Score = SUM(%Areas*Scores)													
	2. Estimate the % area within each condition category. Calculators are provided for you below.																									
	3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																									
Scoring:	Condition Category:																	Total Score:								
	% ZOI Area:		0%			0%			80%			0%			20%

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	08/01/18	0.11	W124A, W124B	0.11
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, M. Groomer		41.845306	-78.064734	WD202JLM, PEM wetland	

General Comments: Small PEM wetlands in valley bottom/floodplain. Spring flow enters wetland. Perennial stream separates W124A and W124B. Wetlands tie to stream. PEM wetland in and adjacent to maintained ROW (0.11 acres in ECL). Impacts occur only to the PEM wetland area in the Project area. AA includes entire 0.11 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																			
	Optimal					Suboptimal					Marginal						Poor																		
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/01/18	0.12	W125	0.44	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, M. Groomer		41.845733	-78.067454	WD202JLM, PEM wetland		

General Comments: Small PEM wetland in valley bottom/floodplain. Spring flow enters wetland. Drainage ditch from upstream residential area also enters site. Wetland ties to stream which is lateral extent of wetland. PEM wetland in maintained ROW and residential area (0.12 acres in ECL). Wetland continues upslope and downslope of Project (0.32 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the Project area. AA includes entire 0.44 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence Condition Index																																			
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/02/18	0.03	W126C	0.07	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, M. Groomer		41.767178	-78.315141	WD204JLM, PEM wetland		

General Comments: PEM seep/old seasonal channel. Seep occurs at base of terrace slope/floodplain break. Distinct topographic break. PEM adjacent to maintained pipeline ROW (0.03 acres in ECL). Wetland continues upslope of Project (0.04 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the Project area. AA includes 0.07 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20						
	Optimal					Suboptimal			Marginal				Poor									
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.		High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/03/18	0.14	W127	1.00	

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
J. Miner, M. Groomer	41.760453	-78.337957	WD207JLM, PFO and PEM wetland

General Comments: Wetland/upland mosaic that includes approximately 20-30 percent uplands. Wetland depressions with upland hummocks. PFO wetland in maintained pipeline ROW (0.14 acres in ECL). Wetland continues beyond existing ROW, upslope of Project (0.22 acres delineated) beyond ECL. Connected to PEM wetland within Project area and continues downslope of the Project (0.33 acres delineated) beyond ECL. PEM wetland is connected to another PFO wetland which has no impacts and does not occur within the Project area. Impacts occur only to the PFO and PEM wetland area in the disturbed ROW. AA includes 0.59 acres of PFO and PEM within the Project area and 0.41 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index																					
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category											CI = Total Score/20									
	Optimal		Suboptimal			Marginal			Poor												
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.		High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understorey.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understorey.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understorey.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.			Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/07/18	0.10	W134A	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, B. Shamblin, M. Groomer		41.259983	-78.351378	RW227JLM, PEM wetland		

General Comments: Large PEM wetland in maintained ROW (0.10 acres in ECL). Impacts occur only to the wetland area in the Project area. AA includes 1.00 acre of PEM wetland, wetland delineated as 6.62 acres.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20								
	Optimal					Suboptimal			Marginal			Poor													
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.			Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/07/18	0.16	W135	1.20	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, B. Shamblin, M. Groomer		41.253369	-78.362233	WD228JLM, PEM wetland		

General Comments: Wetland begins in ROW at culvert under highway. Extends in ROW as a narrow channel with wetland fringe to valley bottom. Valley bottom outside of ROW is wetland. Wetland extends in ROW to a water box which diverts flow off ROW. PEM wetland in and adjacent to maintained ROW (0.16 acres in ECL). Impacts occur only to the PEM wetland area in the Project area. AA includes 0.16 acres of PEM within and 1.04 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.						High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, previous trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/08/18	0.02	W138	0.07	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, B. Shamblyn, M. Groomer		41.240996	-78.417151	WD233JLM, PEM wetland		

General Comments: PEM wetland adjacent to perennial stream. Wetland in and adjacent to maintained ROW (0.02 acres in ECL). Impacts occur only to the wetland area in the Project area. AA includes 0.07 acres of PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.						High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries, no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/08/18	0.02	W139A	0.03	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, B. Shamblin, M. Groomer		41.232885	-78.475562	RW235JLM, PEM wetland		

General Comments: PEM wetland connected to intermittent stream. Wetland in and adjacent to maintained ROW (0.02 acres in ECL). Impacts occur only to the wetland area in the Project area. AA includes 0.03 acres of PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20					
	Optimal					Suboptimal			Marginal			Poor									
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.		High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
	SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7		6	5	4	3	2
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																Total Score = SUM(%Areas*Scores)					
Scoring:	Condition Category:																				
	% ZOI Area:		5%		10%		5%		30%		40%		10%

Removal of woody debris			X	
Aquatic weed control (mechanical or herbicide)			X	
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)			X	
Plantation (conversion from typical natural tree species, including orchards)			X	
Other:			X	
Total Number:		2		
Hydrologic Modification				
Ditching, tile draining, or other dewatering methods			X	
Dike/weir/dam			X	
Filling/grading			X	
Dredging/excavation			X	
Stormwater inputs (culvert or similar concentrated urban runoff)	X	1		
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)	X			
Dead or dying trees (trunks still standing) *			X	
Stream alteration (channelization or incision)			X	
Other:			X	
Total Number:		2		
Sedimentation				
Sediment deposits/plumes			X	
Eroding banks/slopes			X	
Active construction (earth disturbance for development)			X	
Active plowing (plowing for crop planting in past year)			X	
Intensive livestock grazing (in one year, ground is >50% bare)			X	
Active selective forestry harvesting (within one year)			X	
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)			X	
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)			X	
Other:	X			
Total Number:		1		
Eutrophication				
Direct discharges from agricultural feedlots, manure pits, etc.			X	
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.			X	
Heavy or moderately heavy formation of algal mats			X	
Other:			X	
Total Number:		0		
Contaminant/Toxicity				
Severe vegetation stress (source unknown or suspected)			X	
Obvious spills, discharges, plumes, odors, etc.			X	
Acidic drainages (mined sites, quarries, road cuts)			X	
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites			X	
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)			X	
Fish or wildlife kills or obvious disease or abnormalities observed			X	
Excessive garbage/dumping			X	
Other:			X	
Total Number:		0		
* Dead or dying trees attributed to beaver activity or emerald ash borer (or other identifiable insect infestation) should not be recorded as a stressor present. The assessor is responsible for recording observations in the comment section concerning presence of these conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	08/01/2018	0.39	W141, W141A	1.00
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.835692	-78.124825	WD206TMM, PSS and PEM wetland	

General Comments: PSS wetland parallels intermittent stream on both sides and is connected to PEM wetland (W141A). PSS Wetland has 0.10 acres in ECL and continues downslope of Project (0.72 acres delineated) beyond ECL. PEM wetland occurs in mowed agricultural field (0.29 acres in ECL) and continues downslope of Project (0.18 acres delineated) beyond ECL where it connects to W141. AA includes entire 0.47 acres of the PEM wetland and 0.53 acres of the PSS wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.											Total Score = SUM(%Areas*Scores)																									
2. Estimate the % area within each condition category. Calculators are provided for you below.																																				
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																				
Scoring:	Condition Category:																						Total Score:													
	% ZOI Area:		0%					0%					50%					0%						45%					5%

		Occurrence in AA		
		Y	#s	N
Vegetation Alteration				
Mowing	X			
Moderate livestock grazing (within one year)				X
Crops (annual row crops, within one year)				X
Selective tree harvesting/cutting (>50% removal, within 5 years)				X
Right-of-way clearing (mechanical or chemical)				X
Clear cutting or Brush cutting (mechanized removal of shrubs and saplings)	X			
Removal of woody debris				X
Aquatic weed control (mechanical or herbicide)				X
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)				X
Plantation (conversion from typical natural tree species, including orchards)				X
Other:				X
Total Number:		2		
Hydrologic Modification				
Ditching, tile draining, or other dewatering methods				X
Dike/weir/dam				X
Filling/grading				X
Dredging/excavation				X
Stormwater inputs (culvert or similar concentrated urban runoff)				X
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)	X			
Dead or dying trees (trunks still standing) *				X
Stream alteration (channelization or incision)				X
Other:				X
Total Number:		1		
Sedimentation				
Sediment deposits/plumes				X
Eroding banks/slopes				X
Active construction (earth disturbance for development)				X
Active plowing (plowing for crop planting in past year)				X
Intensive livestock grazing (in one year, ground is >50% bare)				X
Active selective forestry harvesting (within one year)				X
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)				X
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)				X
Other:	X			
Total Number:		1		
Eutrophication				
Direct discharges from agricultural feedlots, manure pits, etc.				X
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.				X
Heavy or moderately heavy formation of algal mats				X
Other:				X
Total Number:		0		
Contaminant/Toxicity				
Severe vegetation stress (source unknown or suspected)				X
Obvious spills, discharges, plumes, odors, etc.				X
Acidic drainages (mined sites, quarries, road cuts)				X
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites				X
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)				X
Fish or wildlife kills or obvious disease or abnormalities observed				X
Excessive garbage/dumping				X
Other:				X
Total Number:		0

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/02/2018	0.06	W143	0.08	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.821705	-78.191506	WD209TMM, PEM wetland		

General Comments: PEM wetland located in depression within floodplain of stream. Abutts perennial stream, and is adjacent to W103 and W143A. Wetland has 0.06 acres in ECL and continues on both sides of Project (0.02 acres delineated) beyond ECL. AA includes entire 0.08 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20			
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor							
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.			Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2		1		
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	08/03/18	0.04	W145	0.09

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
T. Malecki, M. Groomer	41.715968	-78.474561	WD212TMM, PEM wetland

General Comments: PEM wetland located on hillside terrace at corner of agricultural plot and adjacent to forest (0.04 acres in ECL). PEM wetland continues downslope of Project (0.05 acres delineated) beyond ECL. AA includes entire 0.09 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

1. Wetland Zone of Influence Condition Index																																	
Wetland Zone of Influence (300 foot area around AA perimeter)		Condition Category																		CI = Total Score/20													
		Optimal					Suboptimal					Marginal					Poor																
		ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.			Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/07/18	0.11	W149	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.219774	-78.55829	WD226TMM, PSS wetland		

General Comments: PSS wetland located between road and stream. Intermittent stream runs through wetland. Wetland occurs in existing pipeline ROW (0.11 acres in ECL) and continues on both sides of Project (1.01 acres delineated) beyond ECL. AA includes 1.00 acre of the PSS wetland out of 1.12 acres that were delineated.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20	
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor					
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)								
Scoring:	Condition Category:																				
	% ZOI Area:		0%			0%			30%			20%			20%			30%			Total Score:
	Score:		0			0			12			7			4			1

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	08/07/18	0.10	W149C	0.39
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.219321	-78.553844	RW228TMM, PEM wetland	

General Comments: PEM wetland located between stream and PSS wetland. Adjacent but not connected to W149D. Wetland occurs in existing pipeline ROW (0.10 acres in ECL); continues upslope of Project (0.27 acres delineated) and downslope of Project (0.02 acres delineated) beyond ECL. AA includes entire 0.39 acres of PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																		CI = Total Score/20																		
	Optimal					Suboptimal					Marginal					Poor																					
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.																			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3		2	1																
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)																								
Scoring:	Condition Category:																						Total Score:														
	% ZOI Area:		15%					15%					10%					10%																			
	Score:		14					12					9					7																			
	Total Sub-score:		2.10					1.80					0.90					0.70																			
		2.10					1.80					0.90					0.70					1.60					0.10					7.20					0.36

Comments: Area includes stream, another wetland, existing pipeline ROW, forest with maintained understory, paved road, open water, and cleared land.

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories																CI = Total Score/20																			
	Optimal					Suboptimal					Marginal				Poor																					
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.				High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.				Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.				High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.				Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

		Occurrence in AA		
		Y	#'s	N
Vegetation Alteration				
Mowing			X	
Moderate livestock grazing (within one year)			X	
Crops (annual row crops, within one year)			X	
Selective tree harvesting/cutting (>50% removal, within 5 years)			X	
Right-of-way clearing (mechanical or chemical)	X	1		
Clear cutting or Brush cutting (mechanized removal of shrubs and saplings)	X			
Removal of woody debris			X	
Aquatic weed control (mechanical or herbicide)			X	
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)			X	
Plantation (conversion from typical natural tree species, including orchards)			X	
Other:			X	
Total Number:		2		
Hydrologic Modification				
Ditching, tile draining, or other dewatering methods			X	
Dike/weir/dam			X	
Filling/grading			X	
Dredging/excavation			X	
Stormwater inputs (culvert or similar concentrated urban runoff)	X	1		
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)	X			
Dead or dying trees (trunks still standing) *			X	
Stream alteration (channelization or incision)			X	
Other:			X	
Total Number:		2		
Sedimentation				
Sediment deposits/plumes			X	
Eroding banks/slopes			X	
Active construction (earth disturbance for development)			X	
Active plowing (plowing for crop planting in past year)	X			
Intensive livestock grazing (in one year, ground is >50% bare)			X	
Active selective forestry harvesting (within one year)			X	
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)	X			
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)			X	
Other:	X			
Total Number:		3		
Eutrophication				
Direct discharges from agricultural feedlots, manure pits, etc.			X	
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.			X	
Heavy or moderately heavy formation of algal mats			X	
Other:			X	
Total Number:		0		
Contaminant/Toxicity				
Severe vegetation stress (source unknown or suspected)			X	
Obvious spills, discharges, plumes, odors, etc.			X	
Acidic drainages (mined sites, quarries, road cuts)			X	
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites			X	
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)			X	
Fish or wildlife kills or obvious disease or abnormalities observed			X	
Excessive garbage/dumping			X	
Other:			X	
Total Number:		0		
* Dead or dying trees attributed to beaver activity or emerald ash borer (or other identifiable insect infestation) should not be recorded as a stressor present. The assessor is responsible for recording observations in the comment section concerning presence of these conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/10/17	0.10	Pond 06	0.10	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.724942	-78.456237	WD090TMM, Pond/PUB wetland		

General Comments: Pond/PUB wetland located in man-made quarry pit (0.10 acres in ECL). Impacts occur only to the wetland area in the Project area. AA includes entire 0.10 acre of pond/PUB wetland. Wetland delineated as 0.089 acres and impacts are 0.089 acres (impact size and AA size rounded up for form).

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																											
	Optimal					Suboptimal					Marginal						Poor																										
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.						High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries, no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/04/17	0.71	W004, W004B	1.00
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.703887	-78.496159	WD058ATMM, PEM wetland	

General Comments: PEM wetland located on hilltop depression. Multiple access roads cross the wetland channelizing it with culverts. PEM wetland adjacent to access roads, crosses well pad, and extends into maintained pipeline ROW (0.71 acres in ECL). PEM wetland upslope of existing ROW (4.32 acres delineated). PEM and PFO wetlands beyond existing ROW, downslope of Project (5.16 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area. AA includes 0.71 acres of PEM and 0.29 acres of PEM upslope of Project area.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20						
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor										
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.									
	SCORE					20	19	18	17	16	15	14	13	12	11	10	9	8	7		6	5	4	3	2	1
	1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.												Total Score = SUM(%Areas*Scores)													
	2. Estimate the % area within each condition category. Calculators are provided for you below.																									
	3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																									
Scoring:	Condition Category:																	Total Score:								
	% ZOI Area:		0%			0%		60%			0%			40%		0%										
	Score:		0			0		12			0			4		0										
	Total Sub-score:		0.00			0.00		7.20			0.00			1.60		0.00		8.80								
0.44																										

Comments: Area includes maintained pipeline ROW with access roads and gas well pad. Adjacent forest has maintained understory.

2. Roadbed Presence Index

Condition Categories																				
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal					Poor				
	High Optimal: No roadbeds present within 100 feet of the AA boundary					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.				
	Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/4/17	0.40	W005	1.00
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier		41.706119	-78.490757	WD056JLM, PEM and PFO wetlands	

General Comments: PEM wetland in maintained pipeline ROW (0.55 acres in ECL). PFO wetland beyond existing ROW, downslope of Project (1.90 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.55 acres of PEM and 0.45 acres of PFO downslope of Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20																			
	Optimal					Suboptimal					Marginal					Poor																				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, previous trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/9/17	0.17	W006	0.37	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.707962	-78.487241	WD082JLM, PEM and PFO wetlands		

General Comments: Wetland begins within ROW and extends to the south. No wetlands to the north of the ROW. Disturbed by pipeline construction and maintenance. PEM wetland in maintained pipeline ROW (0.17 acres in ECL), PFO wetland beyond existing ROW, downslope of Project (0.12 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.25 acres of PEM and 0.12 acres of PFO downslope of Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																		CI = Total Score/20			
	Optimal					Suboptimal			Marginal			Poor										
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/9/17	1.02	W007, W007A, W007B	1.02	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.709785	-78.483244	WD083JLM, PEM and PFO wetlands		

General Comments: Wetland includes approximately 15-20 percent upland. Hummocky ground where the larger hummocks are upland, primarily around bases of maple trees, wetland in depressions between hummocks. Wetland drains to stream. PEM and PFO wetlands in maintained pipeline ROW (1.02 acres in ECL). PEM and PFO wetland beyond existing ROW, upslope and downslope of Project (2.35 acres delineated) beyond ECL. Impacts occur only to the PEM and PFO wetland area in the disturbed ROW. AA includes 0.82 acres of PEM (W007) and 0.20 acres of PFO (W007A and W007B) within the Project area.

1. Wetland Zone of Influence Condition Index

	Condition Category																CI = Total Score/20											
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal			Poor														
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.										
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1								
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)															
Scoring:	Condition Category:																		Total Score:									
	% ZOI Area:		0%				0%				60%				10%													
	Score:		0				0				13				7													
	Total Sub-score:		0.00				0.00				7.80				0.70				1.20				0.00				9.70	
																				0.49								

Comments: Area includes maintained pipeline ROW with access road/ATV trail. Adjacent forest has maintained understory.

2. Roadbed Presence Index

	Condition Categories																																							
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal					Poor																								
	<u>High Optimal:</u> No roadbeds present within 100 feet of the AA boundary					<u>Low Optimal:</u> Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					<u>High Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					<u>Low Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					<u>High Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					<u>Low Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					<u>High Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					<u>Low Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/9/17	0.10	W008	0.28	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.710627	-78.481262	RW080JLM, PEM wetland		

General Comments: PEM wetland in maintained pipeline ROW (0.10 acres in ECL). Wetland continues beyond existing ROW, downslope of Project (0.18 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes entire 0.28 acres of PEM delineated within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20									
	Optimal					Suboptimal					Marginal			Poor											
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, previous trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/9/17	1.28	W009, W009A, W009B, Pond 03	1.28
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.71172	41.710627	RW081JLM, PEM and PFO wetlands	

General Comments: Perennial stream runs through wetlands and connects to two ponds. Wetlands drain to stream. Wetlands and pond in maintained pipeline ROW (1.28 acres in ECL). PEM and PFO wetland beyond existing ROW, upslope and downslope of Project (2.52 acres delineated) beyond ECL. Impacts occur only to the PEM and PFO wetland area in the disturbed ROW. AA includes 1.09 acres of PEM (W009), 0.17 acres of PFO (W009A and W009B), and 0.02 acres of Pond 03 within the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20				
	Optimal					Suboptimal					Marginal				Poor						
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.				High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Roadbed Worksheet

Project Name / Identifier			Date	Name(s) of Evaluator(s)
NFG FM100 Project			10/9/17	J. Miner, C. Maier, M. Groomer
Resource Identifier	AA #	Lat (dd)	Long (dd)	Notes:
RW081JLM	W009, W009A, W009B, Pond 03	41.71172	41.710627	Pipeline access road/ATV trail

Roadbeds: Record the number of occurrences by roadbed type and distance category. Multiply the number of occurrences by the weighting factors for each roadbed type and distance category then sum the total score for each distance category. The total scores for each distance category are then compared to the condition category descriptions.

Roadbed Type	Distance	Occurrences	Weighting Factor	Score	Distance	Occurrences	Weighting Factor	Score
≥ 4 Lane Paved	0-100 ft.		4	0	100-300 ft.		4	0
2 Lane Paved	0-100 ft.		2	0	100-300 ft.		2	0
1 Lane Paved	0-100 ft.		1	0	100-300 ft.		1	0
Gravel Road	0-100 ft.		1	0	100-300 ft.		1	0
Dirt Road	0-100 ft.	1	2	2	100-300 ft.	1	2	2
Railroad	0-100 ft.		2	0	100-300 ft.		2	0
Other Roadbeds	0-100 ft.		1, 2 or 4	0	100-300 ft.		1, 2 or 4	0
Total Scores:	0-100 ft.	2			100-300 ft.	2		

Road Comments: Unimproved access road/ATV trail used for pipeline inspection and maintenance. Not an improved road, no gravel, no grading.

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002) Pennsylvania Department of Environmental Protection STRESSOR WORKSHEET		10/9/17		
		Occurrence in AA		
		Y	#'s	N
Vegetation Alteration				
Mowing	X			
Moderate livestock grazing (within one year)				X
Crops (annual row crops, within one year)				X
Selective tree harvesting/cutting (>50% removal, within 5 years)				X
Right-of-way clearing (mechanical or chemical)	X	1		
Clear cutting or Brush cutting (mechanized removal of shrubs and saplings)	X			
Removal of woody debris				X
Aquatic weed control (mechanical or herbicide)				X
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)				X
Plantation (conversion from typical natural tree species, including orchards)				X
Other:				X
Total Number:		3		
Hydrologic Modification				
Ditching, tile draining, or other dewatering methods				X
Dike/weir/dam				X
Filling/grading				X
Dredging/excavation				X
Stormwater inputs (culvert or similar concentrated urban runoff)				X
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)	X			
Dead or dying trees (trunks still standing) *				X
Stream alteration (channelization or incision)				X
Other:				X
Total Number:		1		
Sedimentation				
Sediment deposits/plumes				X
Eroding banks/slopes				X
Active construction (earth disturbance for development)				X
Active plowing (plowing for crop planting in past year)				X
Intensive livestock grazing (in one year, ground is >50% bare)				X
Active selective forestry harvesting (within one year)				X
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)				X
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)				X
Other:	X			
Total Number:		1		
Eutrophication				
Direct discharges from agricultural feedlots, manure pits, etc.				X
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.				X
Heavy or moderately heavy formation of algal mats				X
Other:				X
Total Number:		0		
Contaminant/Toxicity				
Severe vegetation stress (source unknown or suspected)				X
Obvious spills, discharges, plumes, odors, etc.				X
Acidic drainages (mined sites, quarries, road cuts)				X
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites				X
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)				X
Fish or wildlife kills or obvious disease or abnormalities observed				X
Excessive garbage/dumping				X
Other:				X
Total Number:		0		
* Dead or dying trees attributed to beaver activity or emerald ash borer (or other identifiable insect infestation) should not be recorded as a stressor present. The assessor is responsible for recording observations in the comment section concerning presence of these conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/09/17	1.44	W010, W010A, W010B	1.44
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.713516	-78.476277	WD089TMM, PEM and PFO wetlands	

General Comments: PEM wetland located on hillside and extends into valley bottom draining into stream. PEM wetland adjacent to forest and occurs within maintained pipeline ROW (1.22 acres in ECL). PEM wetland continues downslope of existing ROW (0.91 acres delineated). PFO wetlands beyond existing ROW, upslope of Project (3.39 acres delineated) beyond ECL. Impacts mainly occur to the PEM wetland area, but also include a small portion of the PFO wetland area. AA includes 1.22 acres of PEM (W010) and 0.22 acres of PFO (W010A and W010B) upslope of Project area.

1. Wetland Zone of Influence Condition Index

	Condition Category																		CI = Total Score/20							
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor										
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.									
	SCORE					20	19	18	17	16	15	14	13	12	11	10	9	8		7	6	5	4	3	2	1
	1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.												Total Score = SUM(%Areas*Scores)													
	Condition Category:																									
	Scoring:	% ZOI Area:		0%					80%					0%		20%				0%			Total Score:			
Score:		0					12					0		4			0									
Total Sub-score:		0.00					0.00					9.60		0.00		0.80			0.00			10.40				
0.52																										

Comments: Area includes maintained pipeline ROW with access road/ATV trail. Adjacent forest has maintained understory.

2. Roadbed Presence Index

Condition Categories																																								
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal					Poor																								
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/08/17	0.01	W015	0.04	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.716675	-78.47027	RW079ATMM, PEM wetland		

General Comments: PEM wetland located on hillside below culvert, adjacent to forest, and occurs within maintained pipeline ROW (0.01 acres in ECL). Intermittent stream runs through wetland. PEM wetland continues downslope of Project (0.03 acres delineated) beyond ECL. AA includes entire 0.04 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																CI = Total Score/20				
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal				Poor						
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.		<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.			<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5		4	3	2	1
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.												Total Score = SUM(%Areas*Scores)									
Scoring:	Condition Category:																				
	% ZOI Area:		0%		0%		50%		0%		40%		10%							Total Score:	
	Score:		0		0		12		0		4		2								
	Total Sub-score:		0.00		0.00		6.00		0.00		1.60		0.20		7.80						
																				0.39	

Comments: Area includes maintained pipeline ROW with access road/ATV trail. Agricultural plot and other wetlands occur within ZOI. Adjacent forest has maintained understory.

2. Roadbed Presence Index

2. Roadbed Presence Index																				
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)		Condition Categories																		
		Optimal					Suboptimal					Marginal					Poor			
		High Optimal: No roadbeds present within 100 feet of the AA boundary		Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.			High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.		Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.			High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.		Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.			High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.		Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/08/17	0.41	W016, W016A, W016B	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.720256	-78.465447	WD081TMM, PEM and PFO wetlands		

General Comments: PEM wetland located in valley bottom. Multiple man-made ponds and intermittent streams within wetland boundary. PEM wetland occurs within maintained pipeline ROW (0.40 acres in ECL) and is adjacent to forest. PEM wetland continues downslope of Project (0.12 acres delineated) beyond ECL. PFO wetland occurs partially within pipeline ROW (0.01 acres in ECL) and extends upslope of Project (0.97 acres delineated) beyond ECL. AA includes 0.52 acres of the PEM wetlands (W016A and W016B) and 0.48 acres of the PFO wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20														
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																		
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.				<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/08/17	0.01	W018	0.02	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.726217	-78.452289	RW083ATMM, PEM and PFO wetlands		

General Comments: PEM wetland adjacent to forest and occurs within maintained pipeline ROW (0.01 acres in ECL). PEM wetland continues downslope of Project (0.01 acres delineated) beyond ECL. Intermittent stream runs through wetland. AA includes entire 0.02 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category															CI = Total Score/20										
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal			Marginal			Poor														
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.									
	SCORE					20	19	18	17	16	15	14	13	12	11		10	9	8	7	6	5	4	3	2	1
	1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.																Total Score = SUM(%Areas*Scores)									
	2. Estimate the % area within each condition category. Calculators are provided for you below.																									
	3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																									
Scoring:	Condition Category:																									
	% ZOI Area:		0%			0%			80%			0%			20%			0%			Total Score:					
	Score:		0			0			12			0			4			0								
	Total Sub-score:		0.00			0.00			9.60			0.00			0.80			0.00			10.40					
0.52																										

Comments: Area includes maintained pipeline ROW with access road/ATV trail. Stream and culverts occur within ZOI. Adjacent forest has maintained understory.

2. Roadbed Presence Index

	Condition Categories																							
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal			Poor										
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.		Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.		High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.		Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.		High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.		Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/10/17	0.72	W020, W020A	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.729827	-78.447915	WD092TMM, PFO and PEM wetland		

General Comments: Large PEM and PFO wetland complex with streams throughout. PFO wetland located in valley bottom in existing pipeline ROW (0.23 acres in ECL) and forested hillside. PFO wetland continues upslope of Project (0.45 acres delineated) beyond ECL. PEM wetland occurs within maintained pipeline ROW (0.49 acres in ECL) and continues downslope of Project (0.70 acres delineated) beyond ECL. Impacts occur within both the PEM and PFO wetland. AA includes 0.72 acres of the proposed impacted area to PEM and PFO wetland, and 0.28 acres of the wetland complex that will not be impacted.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20														
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																		
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.				<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1														
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/10/17	0.81	W023	1.00
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.731417	-78.445781	WD095JLM, PEM wetland	
General Comments: Seep wetland extends across ROW and connects to stream. PEM wetland in maintained pipeline ROW (0.81 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (0.73 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 1.00 acre of PEM within and beyond the Project area.					

1. Wetland Zone of Influence Condition Index																				
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category												CI = Total Score/20							
	Optimal		Suboptimal		Marginal		Poor													
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.		High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.		High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.							
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)							
Scoring:	Condition Category:																		Total Score:	
	% ZOI Area:		0%		0%		60%		10%		30%		0%							
	Score:		0		0		13		7		4		0							
	Total Sub-score:		0.00		0.00		7.80		0.70		1.20		0.00		9.70				0.49	

Comments: Area includes maintained pipeline ROW with access road/ATV trail, other wetlands, and stream. Adjacent forest has maintained understory.

2. Roadbed Presence Index																				
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories												CI = Total Score/20							
	Optimal		Suboptimal		Marginal		Poor													
	High Optimal: No roadbeds present within 100 feet of the AA boundary	Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.	High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.	Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.	High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.	Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.	High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.	Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.												
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1

Comments: Pipeline ROW maintenance road, two-track, vegetated, with rutting.

Condition Categories													CI = Total Score/20							
b. Roadbed Presence (within 100 - 300 foot Wetland ZOI distance)	Optimal		Suboptimal		Marginal		Poor													
	High Optimal: No roadbeds present within 100 - 300 feet of the AA boundary	Low Optimal: Roadbed presence score within 100 - 300 feet of the AA boundary equal to or less than 2.	High Suboptimal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 2 but equal to or less than 4.	Low Suboptimal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 4 but less than or equal to 6.	High Marginal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 6 but less than or equal to 8.	Low Marginal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 8 but less than or equal to 10.	High Poor: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 10 but less than or equal to 12.	Low Poor: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/10/17	0.11	W025	0.25
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.732491	-78.444463	WD092JLM, PEM wetland	

General Comments: Seep wetland extends across ROW and connects to W026A. Seep wetland under forest canopy, trees are not within the seep. PEM wetland in maintained pipeline ROW (0.11 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (0.14 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.25 acre of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1															
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.																	Total Score = SUM(%Areas*Scores)																		
2. Estimate the % area within each condition category. Calculators are provided for you below.																																			
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																			
Condition Category:																											Total Score:								
Scoring:	% ZOI Area:	0%					0%					60%					10%					30%						0%							
	Score:	0					0					13					7					4						0							
	Total Sub-score:	0.00					0.00					7.80					0.70					1.20						0.00					9.70		

0.49

Comments: Area includes maintained pipeline ROW with access road/ATV trail, other wetlands, and stream. Adjacent forest has maintained understory.

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories																CI = Total Score/20																							
	Optimal					Suboptimal					Marginal					Poor																								
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/10/17	0.55	W026, W026A	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.733336	-78.443875	WD079JLM and WD091JLM, PEM and PSS wetlands		

General Comments: Site mowed routinely across ROW. Willow community present. Distinct elevation/slope break at edge of floodplain. Large wetland complex, W079 is PSS/PEM and W091 is PSS. PSS/PEM wetlands in maintained pipeline ROW (0.55 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (3.10 acres delineated) beyond ECL. Impacts occur only to the PSS/PEM wetland area in the disturbed ROW. AA includes 0.55 acres of PSS/PEM within and 0.45 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index

	Condition Category															CI = Total Score/20																				
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.						High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
	SCORE					20 19 18 17 16					15 14 13 12 11						10 9 8 7 6					5 4 3 2 1														
	1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																Total Score = SUM(%Areas*Scores)																			
Scoring:	Condition Category:																											Total Score:								
	% ZOI Area:		0%					0%					60%					10%					30%						0%							
	Score:		0					0					13					7					4						0							
	Total Sub-score:		0.00					0.00					7.80					0.70					1.20						0.00					9.70		
																						0.49														

Comments: Area includes maintained pipeline ROW with access road/ATV trail, other wetlands, and streams. Adjacent forest has maintained understory.

2. Roadbed Presence Index

Condition Categories																																								
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal					Poor																								
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

3. Vegetation Condition Index

	Condition Category																																		
a. Invasive Species Presence	Optimal					Suboptimal					Marginal					Poor																			
	High Optimal: No invasives present.					Low Optimal: <5% of the total AA contains invasive species.					High Suboptimal: >5% but less than 10% of the total AA contains invasive species.					Low Suboptimal: >10% but less than 20% of the total AA contains invasive species.					High Marginal: >20% but less than 30% of the total AA contains invasive species.					Low Marginal: >30% but less than 50% of the total AA contains invasive species.					> 50% of the total AA contains invasive species.				
	SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1														

Comments: No Invasive Species identified in wetland AA.

	Condition Category																			CI = Total Score/40	
b. Vegetation Stressor Presence	Optimal		Suboptimal				Marginal				Poor										
	High Optimal: No vegetation stressors present within the AA boundary.	Low Optimal: One vegetation stressor present within the AA boundary.	High Suboptimal: Two vegetation stressors present within the AA boundary.	Low Suboptimal: Three vegetation stressors present within the AA boundary.	High Marginal: Four vegetation stressors present within the AA boundary.	Low Marginal: Five vegetation stressors present within the AA boundary.	Greater than five vegetation stressors present within the AA boundary.														
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	
Comments:											a. Invasive Sub-Score:					20	Total Score				0.80
Maintained pipeline ROW and maintenance road/ATV trail.											b. Vegetation Sub-Score:					12	32				

4. Hydrologic Modification Index

	Condition Category															CI = Total Score/20										
Hydrologic Modification Stressor Presence	Optimal			Suboptimal			Marginal			Poor																
	High Optimal: No hydrologic stressors present within the AA boundary.			Low Optimal: One hydrologic stressor present within the AA boundary.			High Suboptimal: Two hydrologic stressors present within the AA boundary.			Low Suboptimal: Three hydrologic stressors present within the AA boundary.			High Marginal: Four hydrologic stressors present within the AA boundary.				Low Marginal: Five hydrologic stressors present within the AA boundary.					Greater than five hydrologic stressors present within the AA boundary.				
	SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7		6	5	4	3	2	1				
Comments: Within ROW alteration caused by pipeline maintenance and ATV use. One culvert in AA.															Score:		14			0.70						

5. Sediment Stressor Index

	Condition Category															CI = Total Score/20					
Sediment Stressor Presence	Optimal					Suboptimal					Marginal			Poor							
	High Optimal: No sediment stressors present within the AA boundary.		Low Optimal: One sediment stressor present within the AA boundary.			High Suboptimal: Two sediment stressors present within the AA boundary.		Low Suboptimal: Three sediment stressors present within the AA boundary.			High Marginal: Four sediment stressors present within the AA boundary.		Low Marginal: Five sediment stressors present within the AA boundary.		Greater than five sediment stressors present within the AA boundary.						
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0.85
Comments: One stressor identified due to ROW maintenance and ATV use.																Score:		17			

6. Water Quality Stressor Index

	Condition Category																			
a. Eutrophication Stressor Presence	Optimal					Suboptimal					Marginal					Poor				
	No eutrophication stressors present within the AA boundary.					One eutrophication stressors present within the AA boundary.					Two eutrophication stressors present within the AA boundary.					Three eutrophication stressors present within the AA boundary.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1

Comments: No stressors identified.

	Condition Category																				CI = Total Score/40
b. Contaminant / Toxicity Stressor Presence	Optimal					Suboptimal					Marginal					Poor					
	No contaminant / toxicity stressors present within the AA boundary.					One contaminant / toxicitystressors present within the AA boundary.					Two contaminant / toxicity stressors present within the AA boundary.					Three contaminant / toxicity stressors present within the AA boundary.					
	SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	
Comments: No stressors identified.											a. Eutrophication Score					20		Total Score:			1.00
											b. Contaminant Score					20		40			

Comments: No stressors identified.

Overall Wetland Level 2 Condition Score: Sum all six of the Condition Indexes and divide by 6 to calculate the overall condition score.	Overall Condition Index:	0.78

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/08/17	0.32	W028	0.46
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.738174	-78.439414	WD077JLM, PEM wetland	

General Comments: Site disturbed by pipeline construction and maintenance. Compacted soil and depressions within rutting. PEM wetland in maintained pipeline ROW (0.32 acres in ECL). Wetland continues beyond existing ROW, downslope of Project (0.14 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.46 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/10/17	0.17	W029	0.21
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.740056	-78.435178	WD089JLM, PEM wetland	

General Comments: Site disturbed by pipeline construction and maintenance. Small depression confined to ROW with compacted soils. Adjacent forest all upland. PEM wetland in maintained pipeline ROW (0.17 acres in ECL). Wetland continues beyond existing ROW, downslope of Project (0.04 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.21 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index																					
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category										CI = Total Score/20										
	Optimal		Suboptimal		Marginal		Poor														
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.		High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.		High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.								
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.											Total Score = SUM(%Areas*Scores)					0.52					
2. Estimate the % area within each condition category. Calculators are provided for you below.																					
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																					
Scoring:	Condition Category:																				
	% ZOI Area:		0%		0%		70%		0%		30%		0%								
	Score:		0		0		13		0		4		0								
Total Sub-score:		0.00		0.00		9.10		0.00		1.20		0.00									

Comments: Area includes maintained pipeline ROW with access road/ATV trail. Adjacent forest has maintained understory.

2. Roadbed Presence Index																				
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories										CI = Total Score/20									
	Optimal		Suboptimal		Marginal		Poor													
	High Optimal: No roadbeds present within 100 feet of the AA boundary	Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.	High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.	Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.	High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.	Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.	High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.	Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/07/17	0.33	W031, W031A	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.74408	-78.426119	WD078TMM, PFO and PEM wetland		

General Comments: Large PEM and PFO wetland complex. Two ephemeral streams occur within the PEM wetland. PFO wetland located on forested hilltop and is fed by multiple seeps that drain into stream at headwaters. PFO wetland occurs in existing pipeline ROW (0.15 acres in ECL) and continues upslope of Project (1.98 acres delineated) beyond ECL. PEM wetland occurs within maintained pipeline ROW (0.18 acres in ECL) and continues downslope of Project (0.10 acres delineated) beyond ECL. Impacts occur within both the PEM and PFO wetland. AA includes 0.33 acres of the proposed impacted area to PEM and PFO wetland, and 0.67 acres of the wetland complex that will not be impacted.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/06/17	0.07	W035	1.00	

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
T. Malecki, M. Groomer	41.754615	-78.398383	WD071TMM, PSS and PEM wetland

General Comments: Large PEM and PSS wetland complex. Two streams occur within the wetland complex. PSS wetlands located within relic slough within floodplain of stream. The PSS wetland (W035) occurs within maintained pipeline ROW (0.05 acres in ECL) and continues upslope of Project (3.30 acres delineated) beyond ECL. The PEM wetland occurs within an access road (0.02 acres in ECL) and continues upslope of Project (1.11 acres delineated) beyond ECL. Impacts occur within both the PEM and PSS wetlands. AA includes 0.07 acres of the proposed impacted area to PEM and PSS wetlands, and 0.93 acres of the wetland complex that will not be impacted.

1. Wetland Zone of Influence Condition Index

1. Wetland Zone of Influence Condition Index																																							
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																																						
	Optimal					Suboptimal					Marginal					Poor																							
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.								
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																			
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.													Total Score = SUM(%Areas*Scores)																										
2. Estimate the % area within each condition category. Calculators are provided for you below.																																							
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																							
Scoring:	Condition Category:																																						
	% ZOI Area:					0%					20%					40%					20%					Total Score:													
	Score:					0					12					7					4										2

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/06/17	0.17	W037B, W037C	1.00
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.753999	-78.394842	RW068CJLM, PEM and PSS wetlands	

General Comments: Seasonal wet back channel to Potato Creek. PEM and PSS wetland in maintained pipeline ROW (0.17 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (2.28 acres delineated) beyond ECL. Impacts occur only to the PEM and PSS wetland area in the disturbed ROW. AA includes 1.00 acre of PEM and PSS within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Roadbed Worksheet

Project Name / Identifier			Date	Name(s) of Evaluator(s)
NFG FM100 Project			10/06/17	J. Miner, C. Maier, M. Groomer
Resource Identifier	AA #	Lat (dd)	Long (dd)	Notes:
RW068CJLM	W037B, W037C	41.753999	-78.394842	Pipeline access road/ATV trail

Roadbeds: Record the number of occurrences by roadbed type and distance category. Multiply the number of occurrences by the weighting factors for each roadbed type and distance category then sum the total score for each distance category. The total scores for each distance category are then compared to the condition category descriptions.

Roadbed Type	Distance	Occurrences	Weighting Factor	Score	Distance	Occurrences	Weighting Factor	Score
≥ 4 Lane Paved	0-100 ft.		4	0	100-300 ft.		4	0
2 Lane Paved	0-100 ft.		2	0	100-300 ft.	1	2	2
1 Lane Paved	0-100 ft.		1	0	100-300 ft.		1	0

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/06/17	0.01	W041	0.32
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.754799	-78.3941	WD068JLM, PEM wetland	

General Comments: Seasonal wet back channel to Potato Creek. PEM wetland in maintained pipeline ROW (0.001 acres in ECL). Wetland continues beyond existing ROW, upslope of Project (0.31 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.32 acre of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index																				
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category										CI = Total Score/20									
	Optimal		Suboptimal		Marginal		Poor													
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.		<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory. <u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover. <u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.		<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition. <u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.													
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.											Total Score = SUM(%Areas*Scores)									
Scoring:	Condition Category:																		Total Score:	
	% ZOI Area:		0%		0%		25%		25%		30%		20%							
	Score:		0		0		13		7		4		1							
	Total Sub-score:		0.00		0.00		3.25		1.75		1.20		0.20		6.40				0.32	

Comments: Area includes maintained pipeline ROW with access road/ATV trail, other wetlands, a stream, agricultural pasture, development, and a paved road. Adjacent forest has maintained understory.

2. Roadbed Presence Index																				
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories										CI = Total Score/20									
	Optimal		Suboptimal		Marginal		Poor													
	<u>High Optimal:</u> No roadbeds present within 100 feet of the AA boundary <u>Low Optimal:</u> Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.		<u>High Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4. <u>Low Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.		<u>High Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8. <u>Low Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.		<u>High Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12. <u>Low Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/06/17	0.01	W042	0.02

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
J. Miner, C. Maier, M. Groomer	41.754463	-78.393417	WD070JLM, PEM wetland

General Comments: Small depression within a dirt road, intercepting drainage. Disturbed, base soil present due to disturbances. PEM wetland in maintained pipeline ROW (0.01 acres in ECL). Wetland continues beyond existing ROW, upslope of Project (0.01 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.02 acre of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Condition Category																																		
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																		
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1														
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.																Total Score = SUM(%Areas*Scores)																		
2. Estimate the % area within each condition category. Calculators are provided for you below.																																		
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																		
Scoring:	Condition Category:																				Total Score:													
	% ZOI Area:		0%			0%			25%			25%			30%			20%																
	Score:		0			0			13			7			4			1																
	Total Sub-score:		0.00			0.00			3.25			1.75			1.20			0.20						6.40										
																				0.32														

Comments: Area includes maintained pipeline ROW with access road/ATV trail, other wetlands, a stream, agricultural pasture, development, and a paved road. Adjacent forest has maintained understory.

2. Roadbed Presence Index

	Condition Categories																																							
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal					Poor																								
	<u>High Optimal:</u> No roadbeds present within 100 feet of the AA boundary					<u>Low Optimal:</u> Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					<u>High Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					<u>Low Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					<u>High Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					<u>Low Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					<u>High Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					<u>Low Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/07/17	0.01	W049	0.03
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
J. Miner, C. Maier, M. Groomer		41.757017	-78.379114	RW073DJLM, PEM wetland	
General Comments: Small seep under forest canopy and in ROW. Hillside slumps, seep forms a narrow wet swale. PEM wetland in maintained pipeline ROW (0.001 acres in ECL). Wetland continues beyond existing ROW, upslope of Project (0.02 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.03 acres of PEM within and beyond the Project area.					

1. Wetland Zone of Influence Condition Index																							
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																						
	Optimal					Suboptimal			Marginal			Poor											
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.			Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.		
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1			
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.												Total Score = SUM(%Areas*Scores)											
Scoring:	Condition Category:																		Total Score:				
	% ZOI Area:		0%		0%		70%		0%		30%		0%

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/07/17	0.29	W051	0.56

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
J. Miner, C. Maier, M. Groomer	41.757017	-78.379114	RW073EJLM, PEM wetland

General Comments: Small seep under forest canopy and in ROW. Hillside slumps, seep forms a narrow wet swale. PEM wetland in maintained pipeline ROW (0.29 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (0.27 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.56 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/07/17	0.15	W055	0.46	

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
T. Malecki, M. Groomer	41.757137	-78.372617	WD074TMM, PEM wetland

General Comments: PEM wetland connected to perennial stream. Wetland occurs in maintained pipeline ROW (0.01 acres in ECL), continues upslope and downslope of Project (0.31 acres delineated) beyond ECL. AA includes entire 0.46 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

1. Wetland Zone of Influence Condition Index																																			
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					<u>Low Suboptimal:</u> ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					<u>High Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					<u>Low Marginal:</u> ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					<u>High Poor:</u> ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					<u>Low Poor:</u> ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1															
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.												Total Score = SUM(%Areas*Scores)																							
2. Estimate the % area within each condition category. Calculators are provided for you below.																																			
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/07/17	0.01	W056	0.02	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.757105	-78.372081	WD074TMM, PEM wetland		

General Comments: PEM wetland located between gas compressor station and perennial stream. Wetland occurs in maintained pipeline ROW (0.001 acres in ECL), continues upslope of Project (0.01 acres delineated) beyond ECL. AA includes entire 0.02 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20					
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal				Marginal				Poor											
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal:		Low Suboptimal:		High Marginal:		Low Marginal:		High Poor:		Low Poor:									
						ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.		ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.									
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1					
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/03/18	0.12	W059A	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, M. Groomer		41.755869	-78.349029	WD211JLM, PEM and PFO wetlands		

General Comments: PEM wetland channelized across ROW. Broad channel with 6 inches of surface water. Channel drains through culvert. PEM wetland in maintained pipeline ROW (0.12 acres in ECL) and continues beyond existing ROW, upslope and downslope of Project (0.12 acres delineated) beyond ECL. Connected to PFO wetland downslope of the Project (1.27 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.24 acres of PEM and 0.76 acres of PFO within and beyond the Project area.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/03/18	0.57	W061	1.00	

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
J. Miner, M. Groomer	41.758834	-78.341033	WD209JLM, PEM wetland

General Comments: PEM wetland in maintained pipeline ROW (0.57 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (0.50 acres delineated) beyond ECL. Connected to PFO wetland downslope of the Project (0.85 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 1.00 acre of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category														
	Optimal					Suboptimal					Marginal				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/02/17	0.45	W066A	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, F. Davis, M. Groomer		41.760518	-78.337248	WD038JLM, PEM and PFO wetland		

General Comments: Small depressions on hilltop. Relatively indistinct and isolated depression/flat on hilltop. Wetland is disturbed in ROW by compaction and extends into forest. PEM wetland in maintained pipeline ROW (0.45 acres in ECL). Wetland continues beyond existing ROW, upslope and downslope of Project (1.63 acres delineated) beyond ECL. In between and connected to two PFO wetlands upslope and downslope of the Project (1.16 acres delineated) beyond ECL. Impacts occur only to the PEM and PFO wetland area in the disturbed ROW. AA includes 0.59 acres of PEM and PFO within the Project area and 0.41 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.						High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Pennsylvania Department of Environmental Protection

Roadbed Worksheet

Project Name / Identifier			Date	Name(s) of Evaluator(s)
NFG FM100 Project			10/02/17	J. Miner, F. Davis, M. Groomer
Resource Identifier	AA #	Lat (dd)	Long (dd)	Notes:
WD038JLM	W066A	41.760518	-78.337248	Pipeline access road/ATV trail

Roadbeds: Record the number of occurrences by roadbed type and distance category. Multiply the number of occurrences by the weighting factors for each roadbed type and distance category then sum the total score for each distance category. The total scores for each distance category are then compared to the condition category descriptions.

Roadbed Type	Distance	Occurrences	Weighting Factor	Score	Distance	Occurrences	Weighting Factor	Score
≥ 4 Lane Paved	0-100 ft.		4	0	100-300 ft.		4	0
2 Lane Paved	0-100 ft.		2	0	100-300 ft.		2	0
1 Lane Paved	0-100 ft.		1	0	100-300 ft.		1	0
Gravel Road	0-100 ft.		1	0	100-300 ft.		1	0
Dirt Road	0-100 ft.	1	2	2	100-300 ft.	1	2	2
Railroad	0-100 ft.		2	0	100-300 ft.		2	0
Other Roadbeds	0-100 ft.		1, 2 or 4	0	100-300 ft.		1, 2 or 4	0
Total Scores:	0-100 ft.	2			100-300 ft.	2		

Road Comments: Unimproved access road/ATV trail used for pipeline inspection and maintenance. Not an improved road, no gravel, no grading.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/02/17	0.02	W067	0.04	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, F. Davis, M. Groomer		41.763338	-78.32955	WD037JLM, PEM wetland		

General Comments: Wetland restricted to floodplain/valley bottom of small creek. PEM wetland in maintained pipeline ROW (0.02 acres in ECL). Wetland continues beyond existing ROW, downslope of Project (0.02 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.04 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Condition Category																				CI = Total Score/20																
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/02/17	0.02	W070	0.06	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.766956	-78.314731	WD048TMM, PEM wetland		
General Comments: PEM wetland located in floodplain and abutts stream. Wetland occurs in maintained pipeline ROW (0.02 acres in ECL) and continues downslope of Project (0.04 acres delineated) beyond ECL. AA includes entire 0.06 acres of the PEM wetland.						

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																Total Score = SUM(%Areas*Scores)																				
Scoring:	Condition Category:																						Total Score:													
	% ZOI Area:		0%					0%					70%					0%						30%					0%							
	Score:		0					0					12					0						4					0							
	Total Sub-score:		0.00					0.00					8.40					0.00						1.20					0.00					9.60		
Comments: Area includes stream, maintained pipeline ROW with access roads/ATV trail. Adjacent forest has maintained understory.																																				

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories															CI = Total Score/20																								
	Optimal					Suboptimal					Marginal						Poor																							
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/02/17	0.02	W071	0.17	

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
T. Malecki, M. Groomer	41.766819	-78.314517	WD048TMM, PEM wetland

General Comments: PEM wetland located in floodplain and abutts stream. Wetland occurs in maintained pipeline ROW (0.02 acres in ECL) and continues downslope of Project (0.15 acres delineated) beyond ECL. AA includes entire 0.17 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																			CI = Total Score/20
	Optimal					Suboptimal					Marginal					Poor				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.		
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)							
Condition Category:																		Total Score:		
Scoring:	% ZOI Area:	0%				0%				70%				0%

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/05/17	0.03	W076	0.05
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.787781	-78.271437	WD062TMM, PEM wetland	
General Comments: PEM wetland located in floodplain. Adjacent to W077, forest with maintained understory, and in active agricultural field. Wetland occurs in inactive agricultural field and on edge of forest (0.03 acres in ECL) and continues upslope of Project (0.02 acres delineated) beyond ECL. AA includes entire 0.05 acres of the PEM wetland.					

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																Total Score = SUM(%Areas*Scores)																				
Scoring:	Condition Category:																						Total Score:													
	% ZOI Area:		0%					0%					30%					0%						70%					0%							
	Score:		0					0					12					0						4					0							
	Total Sub-score:		0.00					0.00					3.60					0.00						2.80					0.00					6.40		
Comments: Area includes stream, other wetlands, and inactive agricultural field. Adjacent forest has maintained understory.																																				

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories															CI = Total Score/20																								
	Optimal					Suboptimal					Marginal						Poor																							
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/05/17	0.06	W077	0.45
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.787608	-78.271007	WD062TMM, PSS/PEM wetland	

General Comments: PSS/PEM wetland located in floodplain. Wetland has man-made features influencing it including culvert and artificial bed and bank features. Adjacent to W076, forest with maintained understory, and in active agricultural field. Wetland occurs in inactive agricultural field and on edge of forest (0.03 acres in ECL) and continues upslope of Project (0.02 acres delineated) beyond ECL. AA includes entire 0.05 acres of the PSS/PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20	
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor					
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2		1
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)								
Scoring:	Condition Category:

3. Vegetation Condition Index

		Condition Category																																	
a. Invasive Species Presence	Optimal					Suboptimal					Marginal					Poor																			
	High Optimal: No invasives present.					Low Optimal: <5% of the total AA contains invasive species.					High Suboptimal: >5% but less than 10% of the total AA contains invasive species.					Low Suboptimal: >10% but less than 20% of the total AA contains invasive species.					High Marginal: >20% but less than 30% of the total AA contains invasive species.					Low Marginal: >30% but less than 50% of the total AA contains invasive species.					> 50% of the total AA contains invasive species.				
	SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1														

Comments: One Invasive Species identified in wetland AA.

	Condition Category															CI = Total Score/40				
b. Vegetation Stressor Presence	Optimal					Suboptimal				Marginal			Poor							
	High Optimal: No vegetation stressors present within the AA boundary.	Low Optimal: One vegetation stressor present within the AA boundary.	High Suboptimal: Two vegetation stressors present within the AA boundary.	Low Suboptimal: Three vegetation stressors present within the AA boundary.	High Marginal: Four vegetation stressors present within the AA boundary.	Low Marginal: Five vegetation stressors present within the AA boundary.	Greater than five vegetation stressors present within the AA boundary.													
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
Comments:											a. Invasive Sub-Score:					13	Total Score		0.63	
Portion of AA located in maintained pipeline ROW.											b. Vegetation Sub-Score:					12	25			

4. Hydrologic Modification Index

	Condition Category															CI = Total Score/20						
Hydrologic Modification Stressor Presence	Optimal			Suboptimal			Marginal			Poor												
	High Optimal: No hydrologic stressors present within the AA boundary.			Low Optimal: One hydrologic stressor present within the AA boundary.			High Suboptimal: Two hydrologic stressors present within the AA boundary.			Low Suboptimal: Three hydrologic stressors present within the AA boundary.			High Marginal: Four hydrologic stressors present within the AA boundary.				Low Marginal: Five hydrologic stressors present within the AA boundary.			Greater than five hydrologic stressors present within the AA boundary.		
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0.70	
Comments: Two stressors identified due to culverts and portion of AA in maintained pipeline ROW.																Score:		14				

5. Sediment Stressor Index

	Condition Category															CI = Total Score/20					
Sediment Stressor Presence	Optimal			Suboptimal			Marginal			Poor											
	High Optimal: No sediment stressors present within the AA boundary.	Low Optimal: One sediment stressor present within the AA boundary.		High Suboptimal: Two sediment stressors present within the AA boundary.	Low Suboptimal: Three sediment stressors present within the AA boundary.		High Marginal: Four sediment stressors present within the AA boundary.	Low Marginal: Five sediment stressors present within the AA boundary.		Greater than five sediment stressors present within the AA boundary.											
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	1.00
Comments: No stressors identified.																Score:	20				

6. Water Quality Stressor Index

	Condition Category																				
a. Eutrophication Stressor Presence	Optimal					Suboptimal					Marginal					Poor					
	No eutrophication stressors present within the AA boundary.					One eutrophication stressors present within the AA boundary.					Two eutrophication stressors present within the AA boundary.					Three eutrophication stressors present within the AA boundary.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	

Comments: No stressors identified.

	Condition Category																				CI = Total Score/40
b. Contaminant / Toxicity Stressor Presence	Optimal					Suboptimal					Marginal					Poor					
	No contaminant / toxicity stressors present within the AA boundary.					One contaminant / toxicity stressors present within the AA boundary.					Two contaminant / toxicity stressors present within the AA boundary.					Three contaminant / toxicity stressors present within the AA boundary.					
	SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	
Comments: No stressors identified.											a. Eutrophication Score					20		Total Score:		1.00	
											b. Contaminant Score					20		40			

Comments: No stressors identified.

Overall Wetland Level 2 Condition Score: Sum all six of the Condition Indexes and divide by 6 to calculate the overall condition score.

Overall Condition Index:

0.77

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/05/17	0.01	W080, Pond 07	0.16
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.788357	-78.270172	WD064TMM, PEM wetland and Pond 07	

General Comments: PEM wetland located in floodplain between perennial stream and railroad tracks. Intermittent stream runs through wetland and connects to perennial stream and pond. Beaver activity present creating pond. Pond takes up about 25 percent of the wetland. Wetland adjacent to W078, W079, W081, and W082. Wetland and pond occur on edge of maintained pipeline ROW and forest with maintained understory (0.01 acres in ECL) and continues downslope of Project (0.15 acres delineated) beyond ECL. AA includes 0.16 acres of the PEM wetland and pond.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20																		
	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1															
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.																	Total Score = SUM(%Areas*Scores)																		
2. Estimate the % area within each condition category. Calculators are provided for you below.																																			
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																			
Condition Category:																																			
Scoring:	% ZOI Area:	0%					0%					50%					0%					20%					30%					Total Score:			
	Score:	0					0					12					0					4					1								
	Total Sub-score:	0.00					0.00					6.00					0.00					0.80					0.30						7.10		
																					0.36														

Comments: Area includes streams, other wetlands, and maintained pipeline ROW. Adjacent forest has maintained understory. Highway, railroad, and development within 300 feet of AA.

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories																CI = Total Score/20																				
	Optimal				Suboptimal				Marginal				Poor																								
	High Optimal: No roadbeds present within 100 feet of the AA boundary				Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.				High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.				Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.				High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.				Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.				High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.				Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.13	W083	0.16	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.790866	-78.266353	WD066JLM, PEM wetland		

General Comments: Wetland located within the swale adjacent to stream. Seeps contribute to intermittent channel. Site impacted by hoof shearing and cattle grazing, creating micro hummocks/tussocks. PEM wetland in grazed pasture (0.13 acres in ECL). Impacts occur only to the PEM wetland area in the Project area. AA includes entire 0.16 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence Condition Index																																	
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																																
	Optimal					Suboptimal					Marginal					Poor																	
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.				Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1													
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.												Total Score = SUM(%Areas*Scores)																					
2. Estimate the % area within each condition category. Calculators are provided for you below.																																	
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																	
Scoring:	Condition Category:																						Total Score:										
	% ZOI Area:		0%				30%				0%				60%				10%														
	Score:		0				13				0				4				1														
	Total Sub-score:		0.00				3.90				0.00				0.00				2.40					0.10				6.40					
																				0.32													

Comments: Area includes grazed pasture, residential development, paved roads, other wetlands, and streams. Adjacent forest has maintained understory.

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories																																							
	Optimal					Suboptimal					Marginal					Poor																								
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.10	W086	0.10	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.792551	-78.264545	WD066JLM, PEM wetland		

General Comments: PEM wetland in grazed pasture and is connected to ephemeral stream (0.10 acres in ECL). Impacts occur only to the wetland area in the Project area. AA includes entire 0.10 acre of PEM wetland. Wetland delineated as 0.07 acres and impacts are 0.06 acres (impact size and AA size rounded for form).

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20						
	Optimal					Suboptimal			Marginal			Poor											
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.			Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.		
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1			
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.														Total Score = SUM(%Areas*Scores)

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.33	W088	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.79567	-78.264205	WD064JLM, PEM wetland		

General Comments: Mowed hayfield, nearly 100 percent reed canary grass. Depression inundated during wet season. PEM located in agricultural field (0.33 acres in ECL). Wetland continues upslope and downslope of Project (1.47 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the Project area. AA includes 0.33 acres of PEM within and 0.67 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20						
	Optimal					Suboptimal			Marginal			Poor										
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understorey.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understorey.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understorey.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.		
	SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7		6	5	4	3	2	1
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.														Total Score = SUM(%Areas*Scores)								
Scoring:	Condition Category:																			Total Score:		
	% ZOI Area:		0%			30%			10%			40%			20%			0%				
	Score:		0			13			9			7			4			0

Roadbed Worksheet

Project Name / Identifier			Date	Name(s) of Evaluator(s)
NFG FM100 Project			10/05/17	J. Miner, C. Maier, M. Groomer
Resource Identifier	AA #	Lat (dd)	Long (dd)	Notes:
WD064JLM	W088	41.79567	-78.264205	Pipeline access road/ATV trail

Roadbeds: Record the number of occurrences by roadbed type and distance category. Multiply the number of occurrences by the weighting factors for each roadbed type and distance category then sum the total score for each distance category. The total scores for each distance category are then compared to the condition category descriptions.

Roadbed Type	Distance	Occurrences	Weighting Factor	Score	Distance	Occurrences	Weighting Factor	Score
≥ 4 Lane Paved	0-100 ft.		4	0	100-300 ft.		4	0
2 Lane Paved	0-100 ft.		2	0	100-300 ft.		2	0
1 Lane Paved	0-100 ft.		1	0	100-300 ft.		1	0
Gravel Road	0-100 ft.		1	0	100-300 ft.		1	0
Dirt Road	0-100 ft.	1	2	2	100-300 ft.	1	2	2
Railroad	0-100 ft.		2	0	100-300 ft.		2	0
Other Roadbeds	0-100 ft.		1, 2 or 4	0	100-300 ft.		1, 2 or 4	0
Total Scores:	0-100 ft.	2			100-300 ft.	2		

Road Comments: Unimproved access road/ATV trail used for pipeline inspection and maintenance. Not an improved road, no gravel, no grading.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	10/05/17	0.38	W091A	0.80	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, C. Maier, M. Groomer		41.795924	-78.255239	WD058JLM, PEM wetland		

General Comments: PEM wetland in a backwater of the Allegheny River. Forested areas occur outside of the plot and connected to PSS wetland. PEM wetland in maintained pipeline ROW (0.38 acres in ECL) and continues upslope of Project (0.42 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the disturbed ROW. AA includes 0.38 acres of PEM within and 0.42 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20														
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																		
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.				Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1														
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)																					
Condition Category:																																		
Scoring:	% ZOI Area:	0%				40%				10%				10%				20%				20%				Total Score:

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	09/30/17	0.04	W094	0.46	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, F. Davis, M. Groomer		41.795241	-78.250459	WD034JLM, PEM wetland		

General Comments: Wetland is within a hayfield. Soils compacted by plow pan/operations. Wetland is the low end of the hayfield, intercepts drainage ditch. PEM wetland in agricultural field (0.04 acres in ECL) and continues downslope of Project (0.42 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the Project area. AA includes 0.46 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

	Condition Category															CI = Total Score/20													
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal			Marginal			Poor																	
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.									
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	09/30/17	0.01	W096	0.03	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.811266	-78.205338	WD041TMM, PEM wetland		

General Comments: Intermittent stream drains into wetland. Wetland adjacent to perennial stream. PEM wetland located in existing pipeline ROW at valley bottom (0.004 acres in ECL) and continues upslope of Project (0.02 acres delineated) beyond ECL. AA includes entire 0.03 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																			CI = Total Score/20	
	Optimal					Suboptimal					Marginal					Poor					
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.				Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.		
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.												Total Score = SUM(%Areas*Scores)

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	10/09/17	0.10	W101	0.69
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.819422	-78.193012	WD044TMM, PEM wetland	
General Comments: PEM wetland located in active cow pasture in valley bottom and floodplain. Abutts intermittent stream, and is adjacent to W099 and W100. Wetland has 0.10 acres in ECL and continues downslope of Project (0.59 acres delineated) beyond ECL. AA includes entire 0.69 acres of the PEM wetland.					

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																Total Score = SUM(%Areas*Scores)																				
Scoring:	Condition Category:																											Total Score:								
	% ZOI Area:		0%					0%					0%					0%					100%						0%							
	Score:		0					0					0					0					4						0							
	Total Sub-score:		0.00					0.00					0.00					0.00					4.00						0.00					4.00		
Comments: Area includes streams, other wetlands, and active cow pasture lands.																																				

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories															CI = Total Score/20																								
	Optimal					Suboptimal					Marginal						Poor																							
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	09/29/17	0.04	W112	0.08	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.883906	-77.955779	WD032TMM, PEM wetland		

General Comments: PEM wetland located on hillside in depression within existing ROW. Wetland is adjacent but not connected to W113 and W114. Wetland occurs in maintained pipeline ROW (0.04 acres in ECL) and continues downslope of Project (0.04 acres delineated) beyond ECL. AA includes entire 0.08 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20	
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor					
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					<u>High Suboptimal:</u>		<u>Low Suboptimal:</u>			<u>High Marginal:</u>		<u>Low Marginal:</u>			<u>High Poor:</u>		<u>Low Poor:</u>			
						ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)								
Scoring:	Condition Category:																				
	% ZOI Area:		0%			0%			80%			0%			20%			0%			Total Score:

Project Name / Identifier			Date	Name(s) of Evaluator(s)				
NFG FM100 Project			09/29/17	T. Malecki, M. Groomer				
Resource Identifier	AA #	Lat (dd)	Long (dd)	Notes:				
WD032TMM	W114	41.884082	-77.95518					
Roadbeds: Record the number of occurrences by roadbed type and distance category. Multiply the number of occurrences by the weighting factors for each roadbed type and distance category then sum the total score for each distance category. The total scores for each distance category are then compared to the condition category descriptions.								
Roadbed Type	Distance	Occurrences	Weighting Factor	Score	Distance	Occurrences	Weighting Factor	Score
≥ 4 Lane Paved	0-100 ft.		4	0	100-300 ft.		4	0
2 Lane Paved	0-100 ft.		2	0	100-300 ft.		2	0
1 Lane Paved	0-100 ft.		1	0	100-300 ft.		1	0
Gravel Road	0-100 ft.		1	0	100-300 ft.		1	0
Dirt Road	0-100 ft.	1	2	2	100-300 ft.	1	2	2
Railroad	0-100 ft.		2	0	100-300 ft.		2	0
Other Roadbeds	0-100 ft.		1, 2 or 4	0	100-300 ft.		1, 2 or 4	0
Total Scores:	0-100 ft.	2			100-300 ft.	2		
Road Comments: Maintained pipeline ROW

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	08/01/18	0.11	W124A, W124B	0.11

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
J. Miner, M. Groomer	41.845306	-78.064734	WD202JLM, PEM wetland

General Comments: Small PEM wetlands in valley bottom/floodplain. Spring flow enters wetland. Perennial stream separates W124A and W124B. Wetlands tie to stream. PEM wetland in and adjacent to maintained ROW (0.11 acres in ECL). Impacts occur only to the PEM wetland area in the Project area. AA includes entire 0.11 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Condition Category																				CI = Total Score/20																
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.																Total Score = SUM(%Areas*Scores)																				
2. Estimate the % area within each condition category. Calculators are provided for you below.																																				
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																				
Scoring:	Condition Category:																						Total Score:													
	% ZOI Area:		0%				5%				5%				10%				75%								5%									
	Score:		0				13				9				7				4				1													
	Total Sub-score:		0.00				0.65				0.45				0.70				3.00				0.05				4.85									
																				0.24																

Comments: Area includes paved road, residential area, other wetlands, a stream, and maintained ROW.

2. Roadbed Presence Index

Condition Categories																																								
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal					Poor																								
	<u>High Optimal:</u> No roadbeds present within 100 feet of the AA boundary					<u>Low Optimal:</u> Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					<u>High Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.					<u>Low Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					<u>High Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					<u>Low Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					<u>High Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					<u>Low Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/02/18	0.03	W126C	0.07	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, M. Groomer		41.767178	-78.315141	WD204JLM, PEM wetland		

General Comments: PEM seep/old seasonal channel. Seep occurs at base of terrace slope/floodplain break. Distinct topographic break. PEM adjacent to maintained pipeline ROW (0.03 acres in ECL). Wetland continues upslope of Project (0.04 acres delineated) beyond ECL. Impacts occur only to the PEM wetland area in the Project area. AA includes 0.07 acres of PEM within and beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category														CI = Total Score/20													
	Optimal					Suboptimal			Marginal				Poor															
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.				Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.				High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, previous trails, recently seeded and stabilized, or other comparable condition.				Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/03/18	0.14	W127	1.00	

Name(s) of Evaluator(s)	Lat (dd)	Long (dd)	Notes:
J. Miner, M. Groomer	41.760453	-78.337957	WD207JLM, PFO and PEM wetland

General Comments: Wetland/upland mosaic that includes approximately 20-30 percent uplands. Wetland depressions with upland hummocks. PFO wetland in maintained pipeline ROW (0.14 acres in ECL). Wetland continues beyond existing ROW, upslope of Project (0.22 acres delineated) beyond ECL. Connected to PEM wetland within Project area and continues downslope of the Project (0.33 acres delineated) beyond ECL. PEM wetland is connected to another PFO wetland which has no impacts and does not occur within the Project area. Impacts occur only to the PFO and PEM wetland area in the disturbed ROW. AA includes 0.59 acres of PFO and PEM within the Project area and 0.41 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index																					
Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category											CI = Total Score/20									
	Optimal		Suboptimal			Marginal			Poor												
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.		High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understorey.			Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understorey.			High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.			Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understorey.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.			Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.			
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.												Total Score = SUM(%Areas*Scores)									
Scoring:	Condition Category:																				
	% ZOI Area:		0%		60%		10%		10%		20%		0%								
	Score:		0		13		9		7		4		0								
	Total Sub-score:		0.00		7.80		0.90		0.70		0.80		0.00		10.20						
Comments: Area includes maintained pipeline ROW with access road/ATV trail and other wetlands. Adjacent forest has maintained understorey.																					

2. Roadbed Presence Index																							
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories											CI = Total Score/20											
	Optimal		Suboptimal			Marginal			Poor														
	High Optimal: No roadbeds present within 100 feet of the AA boundary		Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.			High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.			Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.			High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.			Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.			High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.			Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.		
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1			

Comments: Pipeline ROW maintenance road, two-track, vegetated, with rutting.

Condition Categories																							
b. Roadbed Presence (within 100 - 300 foot Wetland ZOI distance)	Optimal		Suboptimal			Marginal			Poor			CI = Total Score/20											
		High Optimal: No roadbeds present within 100 - 300 feet of the AA boundary		Low Optimal: Roadbed presence score within 100 - 300 feet of the AA boundary equal to or less than 2.			High Suboptimal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 2 but equal to or less than 4.			Low Suboptimal: Roadbed presence score within 100 - 300 feet AA boundary is greater than 4 but less than or equal to 6.			High Marginal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 6 but less than or equal to 8. Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002) Pennsylvania Department of Environmental Protection STRESSOR WORKSHEET		08/07/18		
		Occurrence in AA		
		Y	#'s	N
Vegetation Alteration				
Mowing			X	
Moderate livestock grazing (within one year)			X	
Crops (annual row crops, within one year)			X	
Selective tree harvesting/cutting (>50% removal, within 5 years)			X	
Right-of-way clearing (mechanical or chemical)	X	1		
Clear cutting or Brush cutting (mechanized removal of shrubs and saplings)	X			
Removal of woody debris			X	
Aquatic weed control (mechanical or herbicide)			X	
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)			X	
Plantation (conversion from typical natural tree species, including orchards)			X	
Other:			X	
Total Number:		2		
Hydrologic Modification				
Ditching, tile draining, or other dewatering methods			X	
Dike/weir/dam			X	
Filling/grading			X	
Dredging/excavation			X	
Stormwater inputs (culvert or similar concentrated urban runoff)	X	1		
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)	X			
Dead or dying trees (trunks still standing) *			X	
Stream alteration (channelization or incision)			X	
Other:			X	
Total Number:		2		
Sedimentation				
Sediment deposits/plumes			X	
Eroding banks/slopes			X	
Active construction (earth disturbance for development)			X	
Active plowing (plowing for crop planting in past year)			X	
Intensive livestock grazing (in one year, ground is >50% bare)			X	
Active selective forestry harvesting (within one year)			X	
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)			X	
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)			X	
Other:	X			
Total Number:		1		
Eutrophication				
Direct discharges from agricultural feedlots, manure pits, etc.			X	
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.			X	
Heavy or moderately heavy formation of algal mats			X	
Other:			X	
Total Number:		0		
Contaminant/Toxicity				
Severe vegetation stress (source unknown or suspected)			X	
Obvious spills, discharges, plumes, odors, etc.			X	
Acidic drainages (mined sites, quarries, road cuts)			X	
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites			X	
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)			X	
Fish or wildlife kills or obvious disease or abnormalities observed			X	
Excessive garbage/dumping			X	
Other:			X	
Total Number:		0		
* Dead or dying trees attributed to beaver activity or emerald ash borer (or other identifiable insect infestation) should not be recorded as a stressor present. The assessor is responsible for recording observations in the comment section concerning presence of these conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/07/18	0.16	W135	1.20	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, B. Shamblin, M. Groomer		41.253369	-78.362233	WD228JLM, PEM wetland		

General Comments: Wetland begins in ROW at culvert under highway. Extends in ROW as a narrow channel with wetland fringe to valley bottom. Valley bottom outside of ROW is wetland. Wetland extends in ROW to a water box which diverts flow off ROW. PEM wetland in and adjacent to maintained ROW (0.16 acres in ECL). Impacts occur only to the PEM wetland area in the Project area. AA includes 0.16 acres of PEM within and 1.04 acres beyond the Project area.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																			CI = Total Score/20																
	Optimal					Suboptimal					Marginal					Poor																				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, previous trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)																							
Scoring:	Condition Category:																						Total Score:													
	% ZOI Area:		0%				80%				0%				20%				0%																	
	Score:		0				13				0				4				0																	
	Total Sub-score:		0.00				10.40				0.00				0.00				0.80				0.00				11.20									
																				0.56																

Comments: Area includes maintained pipeline ROW with access road/ATV trail. Adjacent forest has maintained understory.

2. Roadbed Presence Index

	Condition Categories																																								
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal						Poor																								
	<u>High Optimal:</u> No roadbeds present within 100 feet of the AA boundary					<u>Low Optimal:</u> Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					<u>High Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.						<u>Low Suboptimal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					<u>High Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					<u>Low Marginal:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					<u>High Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					<u>Low Poor:</u> Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

		Occurrence in AA		
		Y	#'s	N
Vegetation Alteration				
Mowing			X	
Moderate livestock grazing (within one year)			X	
Crops (annual row crops, within one year)			X	
Selective tree harvesting/cutting (>50% removal, within 5 years)			X	
Right-of-way clearing (mechanical or chemical)	X	1		
Clear cutting or Brush cutting (mechanized removal of shrubs and saplings)	X			
Removal of woody debris			X	
Aquatic weed control (mechanical or herbicide)			X	
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)			X	
Plantation (conversion from typical natural tree species, including orchards)			X	
Other:			X	
Total Number:		2		
Hydrologic Modification				
Ditching, tile draining, or other dewatering methods			X	
Dike/weir/dam			X	
Filling/grading			X	
Dredging/excavation			X	
Stormwater inputs (culvert or similar concentrated urban runoff)	X	1		
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)	X			
Dead or dying trees (trunks still standing) *			X	
Stream alteration (channelization or incision)			X	
Other:			X	
Total Number:		2		
Sedimentation				
Sediment deposits/plumes			X	
Eroding banks/slopes			X	
Active construction (earth disturbance for development)			X	
Active plowing (plowing for crop planting in past year)			X	
Intensive livestock grazing (in one year, ground is >50% bare)			X	
Active selective forestry harvesting (within one year)			X	
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)			X	
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)			X	
Other:	X			
Total Number:		1		
Eutrophication				
Direct discharges from agricultural feedlots, manure pits, etc.			X	
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.			X	
Heavy or moderately heavy formation of algal mats			X	
Other:			X	
Total Number:		0		
Contaminant/Toxicity				
Severe vegetation stress (source unknown or suspected)			X	
Obvious spills, discharges, plumes, odors, etc.			X	
Acidic drainages (mined sites, quarries, road cuts)			X	
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites			X	
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)			X	
Fish or wildlife kills or obvious disease or abnormalities observed			X	
Excessive garbage/dumping			X	
Other:			X	
Total Number:		0		
* Dead or dying trees attributed to beaver activity or emerald ash borer (or other identifiable insect infestation) should not be recorded as a stressor present. The assessor is responsible for recording observations in the comment section concerning presence of these conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/08/18	0.02	W138	0.07	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, B. Shamblyn, M. Groomer		41.240996	-78.417151	WD233JLM, PEM wetland		

General Comments: PEM wetland adjacent to perennial stream. Wetland in and adjacent to maintained ROW (0.02 acres in ECL). Impacts occur only to the wetland area in the Project area. AA includes 0.07 acres of PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																		CI = Total Score/20															
	Optimal					Suboptimal					Marginal					Poor																		
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

The total scores for each distance category are then compared to the condition category descriptions.

Roadbed Type	Distance	Occurrences	Weighting Factor	Score	Distance	Occurrences	Weighting Factor	Score
≥ 4 Lane Paved	0-100 ft.		4	0	100-300 ft.		4	0
2 Lane Paved	0-100 ft.	1	2	2	100-300 ft.	1	2	2
1 Lane Paved	0-100 ft.		1	0	100-300 ft.		1	0
Gravel Road	0-100 ft.		1	0	100-300 ft.		1	0
Dirt Road	0-100 ft.	1	2	2	100-300 ft.	1	2	2
Railroad	0-100 ft.		2	0	100-300 ft.		2	0
Other Roadbeds	0-100 ft.		1, 2 or 4	0	100-300 ft.		1, 2 or 4	0
Total Scores:	0-100 ft.	4			100-300 ft.	4		

Road Comments: Existing ROW and paved road present

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002) Pennsylvania Department of Environmental Protection STRESSOR WORKSHEET		08/08/18		
		Occurrence in AA		
		Y	#'s	N
Vegetation Alteration				
Mowing			X	
Moderate livestock grazing (within one year)			X	
Crops (annual row crops, within one year)			X	
Selective tree harvesting/cutting (>50% removal, within 5 years)			X	
Right-of-way clearing (mechanical or chemical)	X	1		
Clear cutting or Brush cutting (mechanized removal of shrubs and saplings)	X			
Removal of woody debris			X	
Aquatic weed control (mechanical or herbicide)			X	
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)			X	
Plantation (conversion from typical natural tree species, including orchards)			X	
Other:			X	
Total Number:		2		
Hydrologic Modification				
Ditching, tile draining, or other dewatering methods			X	
Dike/weir/dam			X	
Filling/grading			X	
Dredging/excavation			X	
Stormwater inputs (culvert or similar concentrated urban runoff)	X	1		
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)	X			
Dead or dying trees (trunks still standing) *			X	
Stream alteration (channelization or incision)			X	
Other:			X	
Total Number:		2		
Sedimentation				
Sediment deposits/plumes			X	
Eroding banks/slopes			X	
Active construction (earth disturbance for development)			X	
Active plowing (plowing for crop planting in past year)			X	
Intensive livestock grazing (in one year, ground is >50% bare)			X	
Active selective forestry harvesting (within one year)			X	
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)			X	
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)			X	
Other:	X			
Total Number:		1		
Eutrophication				
Direct discharges from agricultural feedlots, manure pits, etc.			X	
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.			X	
Heavy or moderately heavy formation of algal mats			X	
Other:			X	
Total Number:		0		
Contaminant/Toxicity				
Severe vegetation stress (source unknown or suspected)			X	
Obvious spills, discharges, plumes, odors, etc.			X	
Acidic drainages (mined sites, quarries, road cuts)			X	
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites			X	
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)			X	
Fish or wildlife kills or obvious disease or abnormalities observed			X	
Excessive garbage/dumping			X	
Other:			X	
Total Number:		0		
* Dead or dying trees attributed to beaver activity or emerald ash borer (or other identifiable insect infestation) should not be recorded as a stressor present. The assessor is responsible for recording observations in the comment section concerning presence of these conditions.				

Pennsylvania Wetland Condition Level 2 Rapid Assessment

(Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

Invasive Species Presence Worksheet

Are invasive species (from list) present at the site in any layer? YES NO

If listed species present, enter the percent areal coverage for each species below:

Species Code	<5%	≥ 5-20%	≥ 20 - 50%	≥ 50%	Species Code	<5%	≥ 5-20%	≥ 20 - 50%	≥ 50%

Total % relative cover of all invasives, collectively on site: 0 %

Comments:

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/08/18	0.02	W139	0.06	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, B. Shamblyn, M. Groomer		41.232687	-78.474216	WD235JLM, PEM wetland		

General Comments: PEM wetland located in between perennial stream and road. Wetland connects to stream in maintained ROW only. Wetland in and adjacent to maintained ROW (0.02 acres in ECL). Impacts occur only to the wetland area in the Project area. AA includes 0.06 acres of PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.						High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
	SCORE					20 19 18 17 16					15 14 13 12 11						10 9 8 7 6					5 4 3 2 1														
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.																Total Score = SUM(%Areas*Scores)																				
2. Estimate the % area within each condition category. Calculators are provided for you below.																																				
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																				
Condition Category:																																				
Scoring:	% ZOI Area:		5%			10%			5%			30%			40%			10%			Total Score:															
	Score:		15			13			9			7			4			1																		
	Total Sub-score:		0.75			1.30			0.45			2.10			1.60			0.10						6.30												
																0.32																				

CI = Total Score/20

0.32

2. Roadbed Presence Index

Condition Categories																																								
a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal					Poor																								
	High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than to 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than to 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than to 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than to 8 but less than or equal to 10.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.				
	SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																			
Comments: Existing ROW and paved road present.																																								

Condition Categories																																								
b. Roadbed Presence (within 100 - 300 foot Wetland ZOI distance)	Optimal					Suboptimal					Marginal					Poor																								
	High Optimal: No roadbeds present within 100 - 300 feet of the AA boundary					Low Optimal: Roadbed presence score within 100 - 300 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than to 2 but equal to or less than 4.					Low Suboptimal: Roadbed presence score within 100 - 300 feet AA boundary is greater than to 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than to 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 100-300 feet of the AA boundary is greater than to 8 but less than or equal to 10.					High Poor: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than to 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 100 - 300 feet of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/08/18	0.02	W139A	0.03	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
J. Miner, B. Shamblyn, M. Groomer		41.232885	-78.475562	RW235JLM, PEM wetland		

General Comments: PEM wetland connected to intermittent stream. Wetland in and adjacent to maintained ROW (0.02 acres in ECL). Impacts occur only to the wetland area in the Project area. AA includes 0.03 acres of PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																			CI = Total Score/20																												
	Optimal					Suboptimal					Marginal					Poor																																
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries, no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.				Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.																		
	SCORE					20 19 18 17 16					15 14 13 12 11					10 9 8 7 6					5 4 3 2 1																											
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																			Total Score = SUM(%Areas*Scores)																													
Condition Category:																																																
Scoring:	% ZOI Area:					5%					10%					30%					40%					10%					Total Score:																	
	Score:					15					13					9					7					4					1																	
	Total Sub-score:					0.75					1.30					0.45					2.10					1.60					0.10					6.30												
																																												0.32				

Comments: Area includes streams, another wetland, existing pipeline ROW, forest with maintained understory, paved road, and cleared land.

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)		Condition Categories																																					
		Optimal					Suboptimal					Marginal						Poor																					
		High Optimal: No roadbeds present within 100 feet of the AA boundary					Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.					High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.						Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.					High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.					Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.					High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.					Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	08/01/2018	0.39	W141, W141A	1.00
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.835692	-78.124825	WD206TMM, PSS and PEM wetland	

General Comments: PSS wetland parallels intermittent stream on both sides and is connected to PEM wetland (W141A). PSS Wetland has 0.10 acres in ECL and continues downslope of Project (0.72 acres delineated) beyond ECL. PEM wetland occurs in mowed agricultural field (0.29 acres in ECL) and continues downslope of Project (0.18 acres delineated) beyond ECL where it connects to W141. AA includes entire 0.47 acres of the PEM wetland and 0.53 acres of the PSS wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.											Total Score = SUM(%Areas*Scores)																									
2. Estimate the % area within each condition category. Calculators are provided for you below.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	08/02/2018	0.31	W142	0.96
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.835602	-78.12785	WD207TMM, PSS/PEM wetland	

General Comments: PSS wetland located on stream bank and extends to agricultural field built on a terrace. Wetland is classified as PEM wetland in agricultural areas that have been mowed. Abutts perennial stream, and is adjacent to W142A, W141, and W141A. Wetland has 0.31 acres in ECL and continues downslope of Project (0.65 acres delineated) beyond ECL. AA includes entire 0.96 acres of the PSS/PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																				CI = Total Score/20															
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.						Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/02/2018	0.06	W143	0.08	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.821705	-78.191506	WD209TMM, PEM wetland		

General Comments: PEM wetland located in depression within floodplain of stream. Abutts perennial stream, and is adjacent to W103 and W143A. Wetland has 0.06 acres in ECL and continues on both sides of Project (0.02 acres delineated) beyond ECL. AA includes entire 0.08 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20															
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2		1														
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.													Total Score = SUM(%Areas*Scores)																						
2. Estimate the % area within each condition category. Calculators are provided for you below.																																			
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																			
Scoring:	Condition Category:																				Total Score:														
	% ZOI Area:		0%			0%			0%			0%			50%			50%

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	08/03/18	0.04	W145	0.09
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.715968	-78.474561	WD212TMM, PEM wetland	

General Comments: PEM wetland located on hillside terrace at corner of agricultural plot and adjacent to forest (0.04 acres in ECL). PEM wetland continues downslope of Project (0.05 acres delineated) beyond ECL. AA includes entire 0.09 acres of the PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category															CI = Total Score/20																				
	Optimal					Suboptimal					Marginal						Poor																			
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, previous trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1																
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.																	Total Score = SUM(%Areas*Scores)																			
2. Estimate the % area within each condition category. Calculators are provided for you below.																																				
3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.																																				
Scoring:	Condition Category:																						Total Score:													
	% ZOI Area:		0%					0%					60%					0%						10%					30%

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)	
456456	NFG FM100 Project	08/07/18	0.11	W149	1.00	
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:		
T. Malecki, M. Groomer		41.219774	-78.55829	WD226TMM, PSS wetland		

General Comments: PSS wetland located between road and stream. Intermittent stream runs through wetland. Wetland occurs in existing pipeline ROW (0.11 acres in ECL) and continues on both sides of Project (1.01 acres delineated) beyond ECL. AA includes 1.00 acre of the PSS wetland out of 1.12 acres that were delineated.

1. Wetland Zone of Influence Condition Index

	Condition Category																			CI = Total Score/20	
Wetland Zone of Influence (300 foot area around AA perimeter)	Optimal					Suboptimal					Marginal					Poor					
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.		Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.		High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.		Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.			High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.		Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.				
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above. 2. Estimate the % area within each condition category. Calculators are provided for you below. 3. Enter the % ZOI Area in decimal form (0.00) and Score for each category in the blocks below.													Total Score = SUM(%Areas*Scores)								
Scoring:	Condition Category:																				Total Score:
	% ZOI Area:		0%			0%			30%			20%			20%			30%			
	Score:		0			0			12			7			4			1			
	Total Sub-score:		0.00			0.00			3.60			1.40			0.80			0.30			
																				0.31	

Comments: Area includes streams, other wetlands, existing pipeline ROW, forest with maintained understory, paved road, open water, and cleared land.

2. Roadbed Presence Index

a. Roadbed Presence (within 0 - 100 foot Wetland ZOI distance)	Condition Categories																			
	Optimal					Suboptimal					Marginal					Poor				
	High Optimal: No roadbeds present within 100 feet of the AA boundary		Low Optimal: Roadbed presence score within 0-100 feet of the AA boundary equal to or less than 2.			High Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 2 but equal to or less than 4.		Low Suboptimal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 4 but less than or equal to 6.			High Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 6 but less than or equal to 8.		Low Marginal: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 8 but less than or equal to 10.			High Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 10 but less than or equal to 12.		Low Poor: Roadbed presence score within 0-100 foot distance of the AA boundary is greater than 12.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

Project #	Project Name	Date	Proposed Impact Size (acres)	AA #	AA Size (acres)
456456	NFG FM100 Project	08/07/18	0.10	W149C	0.39
Name(s) of Evaluator(s)		Lat (dd)	Long (dd)	Notes:	
T. Malecki, M. Groomer		41.219321	-78.553844	RW228TMM, PEM wetland	

General Comments: PEM wetland located between stream and PSS wetland. Adjacent but not connected to W149D. Wetland occurs in existing pipeline ROW (0.10 acres in ECL); continues upslope of Project (0.27 acres delineated) and downslope of Project (0.02 acres delineated) beyond ECL. AA includes entire 0.39 acres of PEM wetland.

1. Wetland Zone of Influence Condition Index

Wetland Zone of Influence (300 foot area around AA perimeter)	Condition Category																CI = Total Score/20																			
	Optimal					Suboptimal					Marginal					Poor																				
	ZOI area vegetation consists of a tree stratum present (diameter at breast height (dbh) > 3 inches) with greater than or equal to 60% tree canopy cover. Areas comprised of stream channels, wetlands (regardless of classification or condition) and lacustrine resources ≥ 10 acres are scored as optimal.					High Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover and containing both herbaceous and shrub layers or a non-maintained understory.					Low Suboptimal: ZOI area vegetation consists of a tree stratum (dbh > 3 inches) present, with greater than or equal to 30% and less than 60% tree canopy cover with a maintained understory.					High Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation with either a shrub layer or a tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover.					Low Marginal: ZOI area vegetation consists of non-maintained, dense herbaceous vegetation, riparian areas lacking shrub and tree stratum, areas of hay production, and ponds or open water areas (< 10 acres). If trees are present, tree stratum (dbh > 3 inches) present, with less than 30% tree canopy cover with maintained understory.					High Poor: ZOI area vegetation consists of lawns, mowed, and maintained areas, nurseries; no-till cropland; actively grazed pasture, sparsely vegetated non-maintained area, pervious trails, recently seeded and stabilized, or other comparable condition.					Low Poor: ZOI area vegetation consists of impervious surfaces; mine spoil lands, denuded surfaces, row crops, active feed lots, impervious trails, or other comparable conditions.					
	SCORE					2019181716					1514131211					109876					54321															
1. Identify all applicable Condition Category areas within the wetland zone of influence using the descriptors above.												Total Score = SUM(%Areas*Scores)																								
2. Estimate the % area within each condition category. Calculators are provided for you below.

Wetland Condition Assessment Form

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

For use in all wetland classifications found within Pennsylvania except those found within the banks of a watercourse.

b. Vegetation Stressor Presence	Optimal		Suboptimal		Marginal		Poor		CI = Total Score/40											
	High Optimal: No vegetation stressors present within the AA boundary.	Low Optimal: One vegetation stressor present within the AA boundary.	High Suboptimal: Two vegetation stressors present within the AA boundary.	Low Suboptimal: Three vegetation stressors present within the AA boundary.	High Marginal: Four vegetation stressors present within the AA boundary.	Low Marginal: Five vegetation stressors present within the AA boundary.	Greater than five vegetation stressors present within the AA boundary.													
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
Comments:											a. Invasive Sub-Score:		20	Total Score		0.85				
Maintenance on pipeline ROW											b. Vegetation Sub-Score:		14	34						

4. Hydrologic Modification Index

Hydrologic Modification Stressor Presence	Optimal		Suboptimal		Marginal		Poor		CI = Total Score/20											
	High Optimal: No hydrologic stressors present within the AA boundary.	Low Optimal: One hydrologic stressor present within the AA boundary.	High Suboptimal: Two hydrologic stressors present within the AA boundary.	Low Suboptimal: Three hydrologic stressors present within the AA boundary.	High Marginal: Four hydrologic stressors present within the AA boundary.	Low Marginal: Five hydrologic stressors present within the AA boundary.	Greater than five hydrologic stressors present within the AA boundary.													
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
Comments: Maintenance on pipeline ROW and runoff from road											Score:		14		0.70					

5. Sediment Stressor Index

Sediment Stressor Presence	Optimal		Suboptimal		Marginal		Poor		CI = Total Score/20											
	High Optimal: No sediment stressors present within the AA boundary.	Low Optimal: One sediment stressor present within the AA boundary.	High Suboptimal: Two sediment stressors present within the AA boundary.	Low Suboptimal: Three sediment stressors present within the AA boundary.	High Marginal: Four sediment stressors present within the AA boundary.	Low Marginal: Five sediment stressors present within the AA boundary.	Greater than five sediment stressors present within the AA boundary.													
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
Comments: Three stressors identified due to maintenance on pipeline ROW and construction in the area.											Score:		12		0.60					

6. Water Quality Stressor Index

a. Eutrophication Stressor Presence	Optimal		Suboptimal		Marginal		Poor		CI = Total Score/40											
	No eutrophication stressors present within the AA boundary.	One eutrophication stressors present within the AA boundary.	Two eutrophication stressors present within the AA boundary.	Three eutrophication stressors present within the AA boundary.																
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1

Comments: No stressors identified.

b. Contaminant / Toxicity Stressor Presence	Optimal		Suboptimal		Marginal		Poor		CI = Total Score/40											
	No contaminant / toxicity stressors present within the AA boundary.	One contaminant / toxicity stressors present within the AA boundary.	Two contaminant / toxicity stressors present within the AA boundary.	Three contaminant / toxicity stressors present within the AA boundary.																
SCORE	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
Comments: No stressors identified.											a. Eutrophication Score		20	Total Score:		1.00				
											b. Contaminant Score		20	40						

Overall Wetland Level 2 Condition Score: Sum all six of the Condition Indexes and divide by 6 to calculate the overall condition score.

Overall Condition Index:

0.69

Pennsylvania Department of Environmental Protection

Roadbed Worksheet

Project Name / Identifier			Date	Name(s) of Evaluator(s)
NFG FM100 Project			08/07/18	T. Malecki, M. Groomer
Resource Identifier	AA #	Lat (dd)	Long (dd)	Notes:
RW227TMM	W149D	41.219088	-78.552983	

Roadbeds: Record the number of occurrences by roadbed type and distance category. Multiply the number of occurrences by the weighting factors for each roadbed type and distance category then sum the total score for each distance category. The total scores for each distance category are then compared to the condition category descriptions.

Roadbed Type	Distance	Occurrences	Weighting Factor	Score	Distance	Occurrences	Weighting Factor	Score
≥ 4 Lane Paved	0-100 ft.		4	0	100-300 ft.		4	0
2 Lane Paved	0-100 ft.	1	2	2	100-300 ft.	1	2	2
1 Lane Paved	0-100 ft.		1	0	100-300 ft.		1	0
Gravel Road	0-100 ft.		1	0	100-300 ft.		1	0
Dirt Road	0-100 ft.	1	2	2	100-300 ft.	1	2	2
Railroad	0-100 ft.		2	0	100-300 ft.		2	0
Other Roadbeds	0-100 ft.		1, 2 or 4	0	100-300 ft.		1, 2 or 4	0
Total Scores:	0-100 ft.	4			100-300 ft.	4		

Road Comments: Existing ROW and paved road present

Pennsylvania Wetland Condition Level 2 Rapid Assessment (Document No. 310-2137-002) Pennsylvania Department of Environmental Protection STRESSOR WORKSHEET		08/07/18		
		Occurrence in AA		
		Y	#'s	N
Vegetation Alteration				
Mowing			X	
Moderate livestock grazing (within one year)			X	
Crops (annual row crops, within one year)			X	
Selective tree harvesting/cutting (>50% removal, within 5 years)			X	
Right-of-way clearing (mechanical or chemical)	X	1		
Clear cutting or Brush cutting (mechanized removal of shrubs and saplings)	X			
Removal of woody debris			X	
Aquatic weed control (mechanical or herbicide)			X	
Excessive herbivory (deer, muskrat, nutria, carp, insects, etc.)			X	
Plantation (conversion from typical natural tree species, including orchards)			X	
Other:			X	
Total Number:		2		
Hydrologic Modification				
Ditching, tile draining, or other dewatering methods			X	
Dike/weir/dam			X	
Filling/grading			X	
Dredging/excavation			X	
Stormwater inputs (culvert or similar concentrated urban runoff)	X	1		
Microtopographic alterations (e.g., plowing, forestry bedding, skidder/ATV tracks)	X			
Dead or dying trees (trunks still standing) *			X	
Stream alteration (channelization or incision)			X	
Other:			X	
Total Number:		2		
Sedimentation				
Sediment deposits/plumes			X	
Eroding banks/slopes			X	
Active construction (earth disturbance for development)			X	
Active plowing (plowing for crop planting in past year)	X			
Intensive livestock grazing (in one year, ground is >50% bare)			X	
Active selective forestry harvesting (within one year)			X	
Active forest harvesting (within two years, includes roads, borrow areas, pads, etc.)	X			
Turbidity (moderate concentration of suspended solids in the water column, obvious sediment discharges)			X	
Other:	X			
Total Number:		3		
Eutrophication				
Direct discharges from agricultural feedlots, manure pits, etc.			X	
Direct discharges from septic or sewage treatment plants, fish hatcheries, etc.			X	
Heavy or moderately heavy formation of algal mats			X	
Other:			X	
Total Number:		0		
Contaminant/Toxicity				
Severe vegetation stress (source unknown or suspected)			X	
Obvious spills, discharges, plumes, odors, etc.			X	
Acidic drainages (mined sites, quarries, road cuts)			X	
Point discharges from adjacent industrial facilities, landfills, railroad yards, or comparable sites			X	
Chemical defoliation (majority of herbaceous and woody plants affected, within one year)			X	
Fish or wildlife kills or obvious disease or abnormalities observed			X	
Excessive garbage/dumping			X	
Other:			X	
Total Number:		0		
* Dead or dying trees attributed to beaver activity or emerald ash borer (or other identifiable insect infestation) should not be recorded as a stressor present. The assessor is responsible for recording observations in the comment section concerning presence of these conditions.				

Pennsylvania Wetland Condition Level 2 Rapid Assessment

(Document No. 310-2137-002)

Pennsylvania Department of Environmental Protection

Invasive Species Presence Worksheet

Are invasive species (from list) present at the site in any layer? YES **NO**

If listed species present, enter the percent areal coverage for each species below:

Species Code	<5%	≥ 5-20%	≥ 20 - 50%	≥ 50%	Species Code	<5%	≥ 5-20%	≥ 20 - 50%	≥ 50%

Total % relative cover of all invasives, collectively on site: 0 %

Comments:

Notes:

¹ Crossing length is the bank-to-bank width of the stream at the pipeline or access road centerline crossing.

² Flow regime based on onsite field review. IT – Intermittent; E – Ephemeral; and P – Perennial. As classified by PA Code Title 25 Chapter 93.

³ As classified by PA Code Title 25 Chapter 93.9 Designated Use shapefile. WWF – Warm Water Fishes; CWF – Cold Water Fishes; MF – Migratory Fishes; TSF – Trout Stocked Fishery; HQ – High Quality; and EV – Exceptional Value.

⁴ As classified by PA Code Title 25 Chapter 93 Existing Use and Existing Use Migratory Fish shapefiles. WWF – Warm Water Fishes; CWF – Cold Water Fishes; MF – Migratory Fishes; TSF – Trout Stocked Fishery; HQ – High Quality; and EV – Exceptional Value.

⁵ Regional listings of Approved Trout Waters are provided by the PFBC website: <http://pfbc.pa.gov/fishpubs/summaryad/troutwaters.html>. Accessed May 2018. Waterbodies within 0.5-mile of a confluence with an Approved Trout Water and within the upper and lower section(s) are also considered Approved Trout Waters.

⁶ As classified under PA Code Title 58, Chapters 57.4 and 57.11 as a Class A Wild Trout Water, Wild Trout Water, or Wilderness Trout Water. In-stream work restrictions for Wild Trout Waters are in effect between October 1 and December 31. All streams classified as Wilderness Trout Waters qualify as EV resources; consultation with PFBC is required to obtain information regarding in-stream construction restriction periods.

⁷ Stream is designated a wild trout stream because it is located upstream of a naturally reproducing wild trout stream.

⁸ If it is determined in the field during construction that either dam or pump or flume pipe methods are not possible; a wet trench method may be utilized. Open-cut methods will be evaluated at the time of construction to be used for streams if no flow is present.
