Subject: Former Bishop Tube Property  
Additional Soil Investigation - Building 5 Area

On November 5-6, 2020, supplemental soil sampling was conducted by Roux Associates, Inc. (“Roux”) in accordance with the work plan submitted by Roux, on behalf of the Bishop Tube Project Team (“BT Team”), to the Pennsylvania Department of Environmental Protection (“DEP”) on October 23, 2020. The objectives of this supplemental soil sampling are described below.

- Assess the horizontal and vertical extent of volatile organic compounds (“VOCs”) in DEP’s area of concern (“AOC”) AOC-6 (i.e., the Plant 5 “Large Degreaser Area”). This additional soil investigation was conducted in a portion of Building 5 collocated with and proximate to DEP’s 2018 soil boring P5LDA02 to determine whether trichloroethene (“TCE”) was present in shallow soil in this area of the Property at concentrations suggestive of an additional VOC source (i.e., an alleged “large degreaser”).
- Assess whether hexavalent chromium is present in DEP’s AOC-5 (i.e., the Alleged Plant 5 “Railing Spill Area”). This additional soil investigation, which included analyses for hexavalent chromium, was conducted to the north of Building 5 collocated with DEP’s 2018 soil borings P5RSA01 and P5RSA02 (which were analyzed for total chromium but not hexavalent chromium).

The data developed as part of this additional soil investigation, as described herein, is also used to assess the preliminary areal extents for AOCs 5 and 6 as depicted in the November 10, 2020 Technology Assessment Memorandum (“Technical Assessment Memo”) prepared by Groundwater & Environmental Services, Inc. (“GES”) for DEP. As described in the Technical Assessment Memo these AOCs were defined by GES based on soils exceeding the DEP’s most stringent default Medium Specific Concentrations (“MSCs”)<sup>1, 2</sup>.

Details regarding the prior samples assessed, the samples collected, and the analytical results are presented in the subsections below.

<sup>1</sup> Reference to DEP’s MSCs herein is solely for purposes of placing the analytical results in context. DEP’s most stringent default MSCs are not to be presumed to be applicable remediation standards.

<sup>2</sup> Although GES and DEP have preliminarily and conservatively used the DEP’s most stringent default MSCs to describe the areal extent of AOCs, in its Technical Assessment Memo GES acknowledges that it anticipates that “a site-specific standard via pathway elimination will be used to attain a residential standard.” (GES, November 10, 2020, pg. 1).

## Plant 5 Alleged “Large Degreaser Area” Additional Soil Investigation

Roux installed twelve (12) soil borings collocated with and proximate to DEP’s 2018 soil boring P5LDA02, which contained TCE at concentrations of 21 milligrams per kilogram (“mg/kg”) and 18.9 mg/kg in DEP’s and Roux’s split samples, respectively. Nine soil samples (from eight soil borings: P5LDA02R, P5LDA02-N, -E, -S, -W, -SE, SW, and S-1) were analyzed for VOCs in accordance with the October 23, 2020 work plan.

Soil boring locations were selected to delineate DEP’s previously advanced soil boring – P5LDA02. Soil borings were drilled to 10 feet (“ft”) below ground surface (“bgs”)<sup>3</sup>. Soils were sampled continuously in the field using macrocores for logging<sup>4</sup>. Field screening was conducted by Roux personnel using a calibrated 11.7 electron-volts (“eV”) bulb photoionization detector (“PID”). Soil boring logs are provided in **Attachment A**.

Twelve (12) soil borings were advanced to 10 ft bgs in conformance with the submitted work plan.<sup>5</sup> Two unsaturated soil samples were collected from each boring at 6.0-6.5 and 9.5-10.0 ft bgs to characterize overall soil conditions in this area<sup>6</sup>. Since there were no notable physical observations (staining, odor or elevated PID readings) to guide sample depths, the default depths proposed in the work plan were used for sample collection. The 6.0-6.5 ft bgs interval was targeted to replicate the interval of soil sample P5LDA02 for horizontal delineation. The 9.5-10.0 ft bgs interval was targeted for vertical delineation, where deemed appropriate. Soil samples were analyzed for Target Compound List (“TCL”) VOCs<sup>7</sup>. Soil boring locations and soil sample analytical results for TCE are presented on **Figure 1**. **Figure 1** also depicts TCE results for three (3) previous soil samples<sup>8</sup> proximate to and south of soil boring P5LDA02-S-1. New data are presented in **Table 1**<sup>9</sup>. The analytical laboratory reports for VOCs in soil are provided in **Attachment B**.

The findings of the soil investigation proximate to and surrounding soil boring P5LDA02 are below.

- Nine (9) soil samples were analyzed from eight (8) soil borings as depicted on Figure 1.
- Seven of the samples analyzed were shallow (6.0 - 6.5 ft bgs); two were deep (9.5 - 10.0 ft bgs) for vertical delineation.
- All samples were collected from the unsaturated zone.

<sup>3</sup> Boring locations were advanced using non-mechanical tools (i.e., a hand auger) to at least 5 feet bgs. Drilling beyond 5 feet bgs was conducted using direct-push drilling methods supplied by Subsurface Environmental Technologies, LLC, a Pennsylvania-licensed driller. Direct-push drilling was conducted using a track-mounted Geoprobe® rig.

<sup>4</sup> Field observations noted included, but were not limited to, soil type and color, grain size, presence of water, staining and odors, and PID readings.

<sup>5</sup> Seven of these soils borings were installed for collection of contingency soil samples to be released depending upon the results of soil samples from the five primary soil borings. Based on the results of samples analyzed during this additional soil investigation, soil samples were not analyzed from four of the contingency soil borings.

<sup>6</sup> Except for the soil boring collocated with the original P5LDA02 soil boring location which just had one sample collected from 9.5-10.0 ft bgs for vertical delineation.

<sup>7</sup> Soils were collected for VOC laboratory analysis using three 5-gram Encore® samplers and placed on ice. All samples were kept under proper chain-of-custody procedures and submitted to Alpha Analytical Laboratories for TCL VOCs analysis by USEPA Method 8260C.

<sup>8</sup> These analytical results are located in the June 10, 2019 Draft Remedial Investigation Report, Appendix A, Table A-1B. Historical Subsurface Soil Results.

<sup>9</sup> For the reader’s convenience, the analytical results of original sample P5LDA02 (6) are included in this table.

- No soil borings had any notable PID readings (i.e., all PID readings ranged from 0.0 parts per million ["ppm"] to 0.8 ppm).
- None of the nine soil samples analyzed for VOCs reported concentrations above the most stringent Residential Direct Contact ("RDC") and/or Non-Residential Direct Contact ("NRDC") MSCs.
- Two shallow soil samples [P5LDA02-S (6-6.5) and P5LDA02-S-1 (6-6.5)] reported VOC concentrations above the most stringent Residential Used Aquifer ("RUA") Soil-to-Groundwater ("SGW") MSC for TCE only.

The physical observations, PID readings, and analytical results from this investigation, coupled with prior data from this area, do not demonstrate conditions suggestive of an additional VOC source (i.e., an alleged "large degreaser") in this area of the Property. This additional soil investigation demonstrates that the horizontal and vertical extent in AOC-6 in Building 5, as described in the GES Technology Assessment Memo, are significantly overestimated, overly conservative and not supported by the data.

### Plant 5 Alleged "Railing Spill Area" Additional Soil Investigation

Roux installed two soil borings (P5RSA01R and P5RSA02R) and collected one soil sample from each boring at 1.0-1.5 ft bgs in conformance with the October 23, 2020 work plan. The soil borings were collocated with DEP's previously advanced soil borings (P5RSA01 and P5RSA02) and the soil samples were analyzed for total chromium and hexavalent chromium<sup>10</sup>.

Soil borings were advanced with a hand auger to 2.0 ft bgs; soils were logged and screened by Roux personnel as previously described. One unsaturated soil sample was collected from each boring at 1.0-1.5 ft bgs. Soil boring logs are provided in **Attachment A**. Soil boing locations and soil sample analytical results are presented on **Figure 2** and **Table 2**<sup>11</sup>, respectively. The analytical laboratory reports for total chromium and hexavalent chromium in soil are provided in **Attachment B**.

The findings of the Alleged Plant 5 "Railing Spill Area" Additional Soil Investigation (i.e., soil investigation collocated with DEP's previously advanced soil borings P5RSA01 and P5RSA02) are below.

- Hexavalent chromium was not detected in either sample with laboratory reporting limits below the RDC.
- In accordance with Chapter 250, Section 10(b), for metals in soil, analyses shall be performed on total metals, except for hexavalent and trivalent chromium, which analyses shall be performed individually. For this reason, DEP has not assigned an MSC for total chromium. Hexavalent chromium results are compared to their respective MSCs: RDC (4 mg/kg), NRDC (220 mg/kg), and RUA/NRUA SGW MSCs (190 mg/kg) for soil.

---

<sup>10</sup> Soils were collected for total chromium and hexavalent chromium laboratory analysis using laboratory-supplied bottleware and placed on ice. All samples were kept under proper chain-of-custody procedures and submitted to Alpha Analytical Laboratories for total metals analysis by USEPA Method 6010D and for hexavalent chromium analysis by USEPA Method 7196A.

<sup>11</sup> For the reader's convenience, the analytical results of original samples P5RSA01 and P5RSA02 are included in this table.

- Because hexavalent chromium was not detected in these speciated samples, the total chromium soil results were compared to the MSCs for trivalent chromium: RDC (190,000 mg/kg), NRDC (190,000 mg/kg), and RUA/NRUA SGW MSCs (190,000 mg/kg) for soil.
- Total chromium results for these two soil samples were 24.7 mg/kg and 34.2 mg/kg, both well below all trivalent chromium MSCs.

The analytical results from this additional soil investigation indicate the absence of a hexavalent chromium source in shallow soil in the Plant 5 Alleged “Railing Spill Area” north of Building 5. Based on these data, AOC-5, depicted as an AOC in the GES Technology Assessment Memo without the benefit of hexavalent chromium speciation data, should be eliminated as an AOC since it is not supported by the data.

## Conclusions

Assessment of the findings from this additional soil investigation leads to the conclusions provided below, by constituents of concern (“COCs”).

### VOCs

1. Horizontal and vertical delineation of the prior VOC detection in sample P5LDA02 (6) was achieved.
2. Vertical delineation was achieved entirely within the unsaturated zone and the deepest samples did not exceed the RUA/NRUA SGW MSCs, indicating that soil impact in this area is not reaching the water table.
3. Only TCE was detected at concentrations above the default RUA/NRUA SGW MSC and, in all cases, the concentrations of TCE were below 38 mg/kg (the default soil RDC MSC). No soil borings had any notable PID readings or other field indications of substantial impact. As a result, no evident source area has been identified.
4. These supplemental data demonstrate that conditions suggestive of an additional VOC source (i.e., an alleged “large degreaser”) in this area of the Property do not exist.
5. This additional soil investigation demonstrates that both the horizontal and vertical extent of VOCs in AOC-6 in Building 5, as depicted in the GES Technology Assessment Memo, are significantly overestimated, overly conservative and not supported by the data.

### Total Chromium and Hexavalent Chromium

1. Samples collected from soil borings collocated with DEP’s 2018 soil borings P5RSA01 and P5RSA02 did not contain detectable concentrations of hexavalent chromium.
2. The total chromium data collected were therefore compared to the trivalent chromium soil MSCs and do not exceed the most stringent criteria.
3. These supplemental data demonstrate that conditions suggestive of a hexavalent chromium source in this area of the Property do not exist.

4. AOC-5, presumptively depicted in the GES Technology Assessment Memo as an AOC without the benefit of hexavalent chromium speciation data, should be eliminated as an AOC since it is not supported by the supplemental data.

**Notes:**

PADEP = Pennsylvania Department of Environmental Protection.

MSCs = Medium Specific Concentrations.

SGW = Soil-to-Groundwater.

RUA = Residential Used Aquifer.

RDC = Residential Direct Contact.

NRDC = Residential Direct Contact.

ft bgs = Feet below ground surface.

mg/kg = Milligrams per kilogram.

— = Sample not analyzed.

ND = Not detected.

NS = No standard currently established.

U = Not detected above laboratory detection limit.

U' = Laboratory reporting limit exceeds the applicable regulatory standard or criteria being utilized.

J = Result below the reporting limit (estimated value).

**Bold** = Detected concentration.

Boxed concentrations exceed the PADEP RDC 0-15 ft bgs Soil MSCs.

+ = Concentrations exceed the PADEP NRDC 2-15 ft bgs Soil MSCs.

† = Concentrations exceed the PADEP RUA SGW MSCs.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

November 13, 2020: This final report includes the results of all requested analyses.

November 12, 2020: This preliminary report includes the results of the Volatile Organics analysis performed on L2048777-10, -13, -15, -17, -19 and -20.

November 09, 2020: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Sample Receipt

L2048777-04, -10, and -12 were placed on hold at the client's request.

#### Volatile Organics

L2048777-09: The sample was analyzed as a High Level Methanol in order to quantitate results within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial Low Level analysis. The results of both analyses are reported.

Differences were noted between the results of the analyses which have been attributed to sample non-homogeneity.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)  Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

*Report Format: DU Report with 'J' Qualifiers*

**Report Date:** 11/13/20

#### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthrenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

**Project Name:** BISHOP TUBE  
**Project Number:** 0539.0003J000

**Lab Number:** L2048777  
**Report Date:** 11/13/20

**Data Qualifiers**

the identification is based on a mass spectral library search.

- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

**The following analytes are not included in our Primary NELAP Scope of Accreditation:**

**Westborough Facility**

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene  
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.  
EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.  
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

**SM 2540D**: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

EPA TO-12 Non-methane organics

EPA 3C Fixed gases

**Biological Tissue Matrix**: EPA 3050B

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

**Report Date:** 11/13/20

### Case Narrative (continued)

#### Report Submission

November 13, 2020: This final report includes the results of all requested analyses.

November 10, 2020: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Sample Receipt

The encores for Volatile Organics analysis were received beyond the required 48 hour holding time for extrusion. The client was notified and the results of the analysis are reported.

#### Total Metals

The WG1433169-3 MS recovery, performed on L2049324-07, is outside the acceptance criteria for chromium (141%). A post digestion spike was performed and was within acceptance criteria.

The WG1433169-4 Laboratory Duplicate RPD for chromium (84%), performed on L2049324-07, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

#### Solids, Total

WG1434054: A Laboratory Duplicate could not be performed due to insufficient sample volume available for analysis.

#### Hexavalent Chromium

L2049324-09 was analyzed with the method required holding time exceeded.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)  Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

*Report Format: DU Report with 'J' Qualifiers*

**Project Name:** BISHOP TUBE  
**Project Number:** 0539.0003J000

**Lab Number:** L2049324  
**Report Date:** 11/13/20

#### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthrenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** BISHOP TUBE  
**Project Number:** 0539.0003J000

**Lab Number:** L2049324  
**Report Date:** 11/13/20

**Data Qualifiers**

the identification is based on a mass spectral library search.

- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

**The following analytes are not included in our Primary NELAP Scope of Accreditation:**

**Westborough Facility**

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene  
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.  
EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.  
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

**SM 2540D**: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

EPA TO-12 Non-methane organics

EPA 3C Fixed gases

**Biological Tissue Matrix**: EPA 3050B
