**Narrative:**

I arrived at the cull de sac near the intersection of Glenwood Drive and Walker Road at 9:55am. I went to observe the activities that Groundwater Environmental and Science (GES) were performing for the day. Upon my arrival, I noticed an over pack drum near the portable bathrooms which was being used to store the bailed LNAPL from the wells. Once it reaches its limit, it is vacuumed out. I went to [redacted] to speak with [redacted] as [redacted] had called and left a message yesterday. [redacted] informed me that GES still had not contacted [redacted] regarding gauging [redacted] potable well, which is across [redacted] where the release occurred. I let [redacted] know that I would speak with GES to see if [redacted] is able to get onto the list of wells that are gauged.

There were three pairs of GES employees who were tasked with sampling residential tap water, one pair that was tasked with gauging four residential potable wells and bailing if there was measurable LNAPL, and Jason Crone from GES who was there as their supervisor. There were sixteen (16) addresses that were to have water sample collected from their faucets. There were four addresses where the potable wells were to be gauged and bailed., which had already occurred prior to my arrival. GES noted that the well at 1287 Walker Road had about 2-3 inches of LNAPL and was bailed. The wells located at 121 Glenwood Drive, 108 Spencer Road, and 107 Spencer Road were gauged, but there was no measurable product in it. The well located at 105 Spencer Road was scheduled to be gauged, but GES needs to obtain access to the property again.

There were five personnel from Center for Toxicology and Environmental Health (CTEH) in the neighborhood; one toxicologist, two scientists and two consultants. They were contracted by Sunoco to observe the activities that GES was performing.

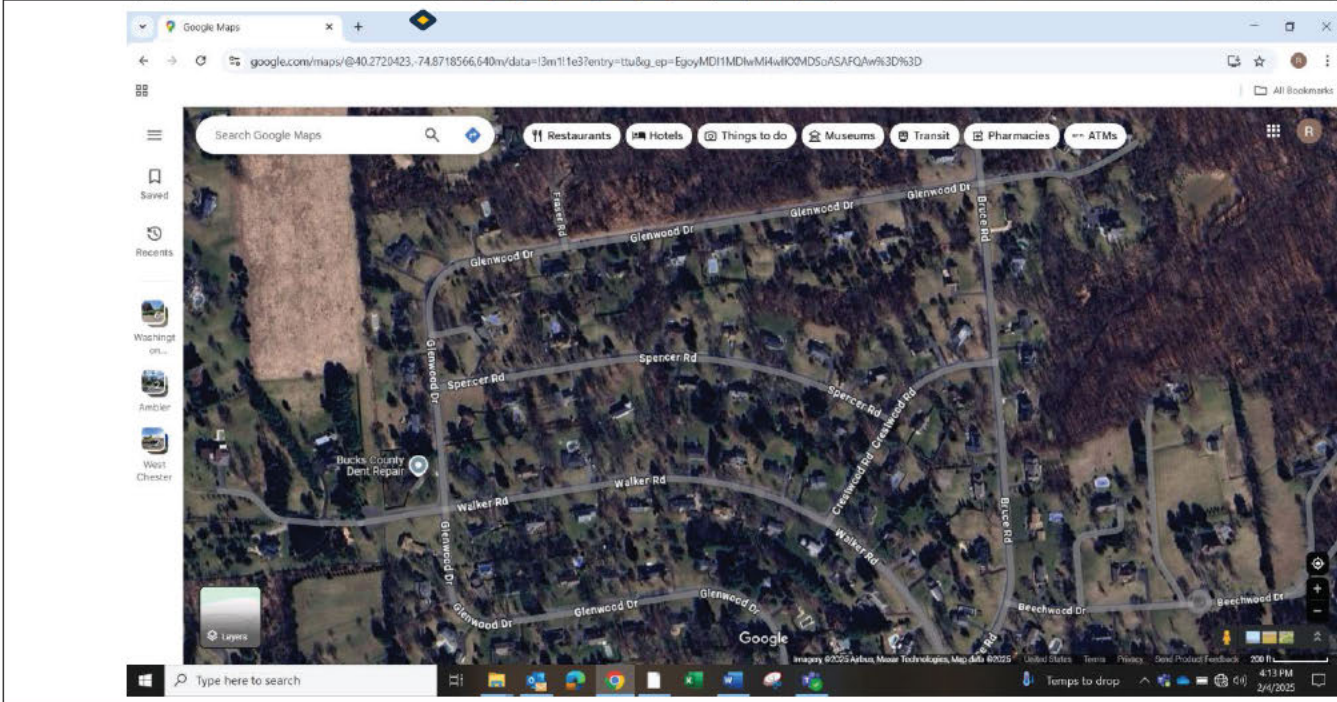

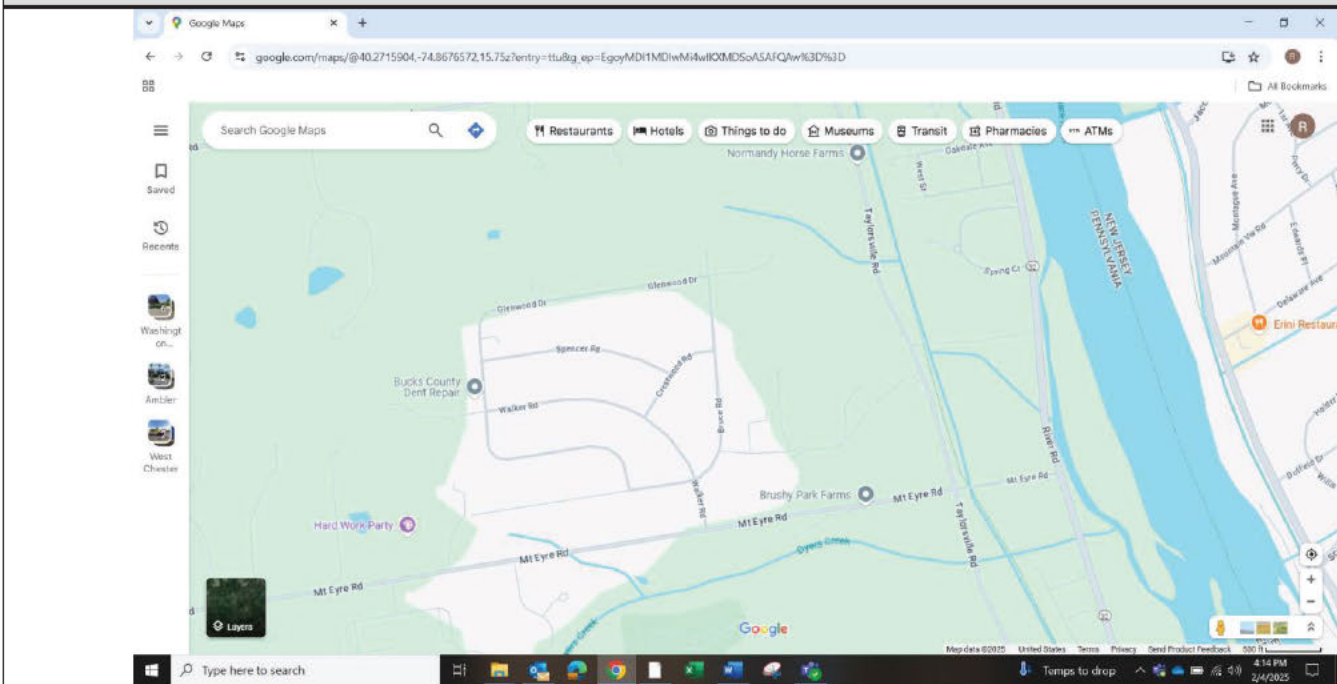

A new potable had previously been installed at 119 Maple Shade Avenue and during the drilling of it, there was a petroleum odor detected. As I was leaving Jason left to collect a soil sample to be analyzed.

I departed the site at 11:50am
