COMMENTS AND RECOMMENDATIONS: This partial inspection was conducted in the company of Mr. Tim Romano (Foreman). One front-end loader and two haul trucks were removing shot rock on the 5th level. One front-end loader and two haul trucks were removing shot rock on the 3rd level. About half of the material from both levels was being moved to a staging area near the primary crusher to be used for reclamation. Pumping data was reviewed and all volumes were approximately 500,000 GPD. The water level on the pit floor appeared to be higher and is at about -114 MSL. The water level in the sump appeared the same. Water was discharging and appeared clear. The operator was reminded to have the reclamation hours and volumes in the quarterly report. The operator was reminded that reclamation work needed to continue as noted in items 2 and 3 in the Department letter dated January 29, 2016. Failure to comply with the terms and conditions of the January 29, 2016 letter will result in enforcement action.

Current depth: -120 MSL Approved to: -120 MSL
