Provide a brief description of the site contamination in plain language (e.g. fuel oil spill, historical chemical industrial area contamination), the names of any know primary contaminants to be addressed, and the intended future use of the property.

As a result of historical manufacturing and chemical recovery operations at the site, soil and groundwater were impacted by volatile and semi-volatile organic compounds, and metals. Primary contaminants include trichloroethene and trichloroethate and related daughter products, and 1,4-dioxane. The intended future use of the property may included development of a public works building and related structures and roads.

Provide a general description of proposed remediation measures.

Remediation options will be evaluated in a Remedial Investigation Report. However, at this time it is envisioned that engineering and institutional controls will be utilited to eliminate potential exposure pathways to identified contamination.

Remediation Standard(s) planned (if known at this time):
