Alexis,

Please see our answers to the questions from yesterday's call. Let me know if you need any additional information.

1. There are 6 moisture analyzers estimated for Cryo 2.
2. We have attached an updated PFD that removed the "De-ethanizer emissions" arrow that was inaccurately shown being routed to the new TO. We also modified the PFD to show a few more items in red that are proposed to make the diagram clearer.
3. We confirmed that the Cryo 1 site is subject to RMP and the plan will be updated to include Cryo 2 equipment.
4. The date of the TCEQ Fugitive Guidance document was incorrect, as you mentioned. The 2018 version that you referenced is the correct one. We utilized the 28VHP control credits from Table V of this document, which is what was also used for Cryo 1.

Please let me know if you have any questions. Thank you.
