

Project Description - The Bushkill Creek Dam Removal and Stream Restoration Project was supposed to accomplish the design, permitting, and construction to remove five dams impounding the Bushkill Creek. Restoration would involve dam removal, instream habitat restoration, stream bank stabilization, and riparian buffer plantings along five priority sites in the Bushkill Creek.

Project Timeframe – December 31, 2020 through December 31, 2023

Pictures –

Project Results - Wildlands in collaboration with partners completed the design and permitting for five dam removals on the Bushkill Creek. To date, we completed construction of four of the five dam removals and associated stream restoration activities. Due to the scale of the project and limited months permitted for construction, we are using additional secured funding to complete construction of the fifth dam removal this summer.

Project Costs - \$93,572 Growing Greener plus an additional \$289,229 in match funds.
