Summary of Review

Act 14 - Proof of Notification was submitted and received.

This facility is not subject to any ELGs.

A Water Quality Management (WQM) Permit is not required at this time.

The applicant should be able to meet the limits of this permit, which will protect the uses of the receiving stream.

- I. OTHER REQUIREMENTS:
 - A. Right of way
 - B. Solids handling
 - C. NPDES Permit Supersedes WQM Permits
 - D. Modification or Revocation for changes to BAT or BCT
 - E. Effluent Chlorine Optimization and Minimization

There are 2 open violations in efacts associated with the subject Client ID (87712) as of 3/20/2024 (see Attachment 1).

Public Participation

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Narrative:

This Fact Sheet details the determination of draft NPDES permit limits for an existing discharge of 0.009 MGD of potable water treatment backwash wastewater from the PA American Water Kane water treatment plant in Kane Borough, McKean County.

NPDES Permit Fact Sheet PA American Water Kane

Permitted treatment consists of: Iron and Manganese removal through aeration, chlorination, pH adjustment, three pressure filters, and settling. WQM permit 266I5-T1 authorizes treatment of the backwash water in a 34,000 gallon earthen settling lagoon. WQM permit 4292201 authorizes treatment of the backwash water in a newer 92,000 gallon circular concrete settling tank.

1. Streamflow:

Kinzua Creek at Guffey, PA - USGS Gage no. 03011800:

Q₇₋₁₀: <u>5.26</u> cfs (from StreamStats)

Drainage Area: <u>38.8</u> sq. mi. (from StreamStats)

Yieldrate: <u>0.135</u> cfsm (calculated)

Hubert Run @ Outfall 001:

Yieldrate: 0.135 cfsm (calculated above)

Drainage Area: 2.43 sq. mi. (from StreamStats)

% of stream allocated: 100% Basis: no nearby discharges

 Q_{7-10} : ofs (calculated)

2. Wasteflow: Outfall 001:

Maximum discharge: 0.009 MGD = 0.013 cfs

Runoff flow period: 24 hours Basis: Flow for a Municipal WTP

Flow will be required to be monitored as recommended by the NPDES Permit Writers' Manual (document number 362-0400-001) for Water Treatment Plant Wastes.

3. Parameters:

The limits for Total Suspended Solids, Total Iron, Total Aluminum, Total Manganese, pH, and Total Residual Chlorine are technology-based on the Departments document entitled, "NPDES Permit Writers' Manual" (document number 362-0400-001) under Chapter 14.5.4 - Methods Employed to Treat and Dispose of Water Treatment Plant Wastes.

a. Total Suspended Solids

Technology-based limits are 30.0 mg/l as a monthly average and 60.0 mg/l as a daily maximum, with a calculated instantaneous maximum of 75.0 mg/l.

b. <u>Total Iron</u>

Technology-based limits are 2.0 mg/l as a monthly average and 4.0 mg/l as a daily maximum, with a calculated instantaneous maximum of 5.0 mg/l.

c. <u>Total Aluminum</u>

Technology-based limits are 4.0 mg/l as a monthly average and 8.0 mg/l as a daily maximum, with a calculated instantaneous maximum of 10.0 mg/l.

d. Total Manganese

Technology-based limits are 1.0 mg/l as a monthly average and 2.0 mg/l as a daily maximum, with a calculated instantaneous maximum of 2.5 mg/l.

e. pH

Between 6.0 and 9.0 at all times.

f. <u>Total Residual Chlorine (TRC)</u>

TRC limits were calculated using the Department's TRC Calculation Spreadsheet (see Attachment 2). The calculated limits are slightly less restrictive than the limits in the previous NPDES Permit, which were technology-based limits of 0.5 mg/l as a monthly average and 1.0 mg/l as a daily maximum, with a calculated instantaneous maximum of 1.25 mg/l.

g. Reasonable Potential for Downstream Public Water Supply (PWS):

Nearest Downstream potable water supply (PWS): Aqua Pennsylvania, Inc. - Emlenton

Distance downstream from the point of discharge: 105 miles (approximate)

| Parameter | PWS Criteria (mg/l) | Discharge Maximum (mg/l) |
|-----------|---------------------|--------------------------|
| TDS | 500 | 58 |
| Chloride | 250 | 10.4 |
| Bromide | 1.0 | <0.072 |
| Sulfate | 250 | 7.5 |

Result: Since none of the parameters are discharged at a concentration greater than the criteria at

the PWS, mass-balance calculations were not performed. No limits or monitoring is

necessary as significant dilution is available.

4. Reasonable Potential Analysis:

A Reasonable Potential Analysis was performed in accordance with State practices for Outfall 001 using the Department's Toxics Management Spreadsheet (see Attachment 3).

Result: The discharge concentrations for the following parameters were found to be greater than 10% of the calculated WQBELs:

| Parameter | Discharge Conc. (μg/l) | WQBEL (µg/l) | %WQBEL |
|--------------|------------------------|--------------|--------|
| Total Copper | 8.19 | 47.0 | >10% |

Per the SOP, since the maximum discharge concentration for Total Copper was greater than 10% of the calculated WQBELs, 1/quarter monitoring will be set with the NPDES Permit renewal.

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (386-0400-001), SOPs and/or BPJ.

Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.

| | | | Effluent L | imitations | | | Monitoring Re | quirements |

| pH (S.U.) | XXX | XXX | 6.0 Inst Min | XXX | XXX | 9.0 | 1/week | Grab |
| TRC | xxx | XXX | XXX | 0.5 | 1.0 | 1.25 | 1/week | Grab |
| TSS | XXX | XXX | XXX | 30.0 | 60.0 | 75 | 2/month | 8-Hr Composite |
| Total Aluminum | XXX | XXX | XXX | 1.0 | 2.0 | 2.5 | 2/month | 8-Hr Composite |
| Total Copper | XXX | XXX | XXX | Report Avg Qrtly | Report | XXX | 1/quarter | 8-Hr Composite |
| Total Iron | XXX | XXX | XXX | 2.0 | 4.0 | 5 | 2/month | 8-Hr Composite |
| Total Manganese | XXX | XXX | XXX | 1.0 | 2.0 | 2.5 | 2/month | 8-Hr Composite |

Compliance Sampling Location: Outfall 001.

Flow and Total Copper are monitor only based on Chapter 92a.61. The limits for pH, Total Residual Chlorine (TRC), Total Suspended Solids (TSS), Aluminum, Iron, and Manganese are technology-based on the NPDES Permit Writers' Manual for potable water treatment backwash wastewater.

☑ Recommended WQBELs & Monitoring Requirements

No. Samples/Month: 4

| | Mass | Limits | Concentration Limits | | | | | | |
|--------------|------------------|------------------|----------------------|--------|--------|-------|-----------------|----------------|------------------------------------|
| Pollutants | AML (lbs/day) | MDL (lbs/day) | AML | MDL | IMAX | Units | Governing WQBEL | WQBEL Basis | Comments |
| Total Copper | Report | Report | Report | Report | Report | μg/L | 47.0 | AFC | Discharge Conc > 10% WQBEL (no RP) |

Other Pollutants without Limits or Monitoring

The following pollutants do not require effluent limits or monitoring based on water quality because reasonable potential to exceed water quality criteria was not determined and the discharge concentration was less than thresholds for monitoring, or the pollutant was not detected and a sufficiently sensitive analytical method was used (e.g., <= Target QL).

| Pollutants | Governing WQBEL | Units | Comments |
|------------------------------|--------------------|-------|----------------------------|
| Total Dissolved Solids (PWS) | N/A | N/A | PWS Not Applicable |
| Chloride (PWS) | N/A | N/A | PWS Not Applicable |
| Bromide | N/A | N/A | No WQS |
| Sulfate (PWS) | N/A | N/A | PWS Not Applicable |
| Fluoride (PWS) | N/A | N/A | PWS Not Applicable |
| Total Aluminum | 11,807 | μg/L | Discharge Conc ≤ 10% WQBEL |
| Total Antimony | N/A | N/A | Discharge Conc < TQL |
| Total Arsenic | N/A | N/A | Discharge Conc < TQL |
| Total Barium | 58,948 | μg/L | Discharge Conc ≤ 10% WQBEL |
| Total Beryllium | N/A | N/A | No WQS |
| Total Boron | 39,299 | μg/L | Discharge Conc < TQL |
| Total Cadmium | 1.97 | μg/L | Discharge Conc ≤ 10% WQBEL |
| Total Chromium (III) | 552 | μg/L | Discharge Conc < TQL |
| Hexavalent Chromium | 255 | μg/L | Discharge Conc ≤ 10% WQBEL |
| Total Cobalt | 467 | μg/L | Discharge Conc ≤ 10% WQBEL |
| Total Cyanide | N/A | N/A | No WQS |
| Dissolved Iron | 7,369 | μg/L | Discharge Conc ≤ 10% WQBEL |
