Summary of Review

The applicant requests renewal of an NPDES permit to discharge treated filter backwash water and supernatant from sludge holding tanks into Rock Run Reservoir, a UNT to West Branch Brandywine Creek from the Rock Run Water Filtration Plant.

The water treatment facility withdraws water from Rock Run Reservoir and prepares it for potable public consumption, then pumps it through a distribution system piping network to residential, commercial, and industrial customers in a number of Boroughs and Townships. Raw water is pumped from the reservoir and dosed with PACL/ferric chloride, powdered carbon, caustic soda, and sodium permanganate and are mixed in a flash mix basin. The water then goes to flocculation basins (2), sedimentation basins (4), and mixed media filters (4) (sodium hypochlorite is added to the top of the filters), then to a clearwell, where fluoride, and sodium hypochlorite (only for emergency situations) are added to the finished water before being pumped into the distribution system.

Filter backwash water, sump pump water, and analyzer wastewater are discharged to the clarifier tanks. When needed wastewater is dechlorinated prior to entering the clarifier tanks. Sludge from the sedimentation basins is discharged into the sludge thickener tank. The sludge settles and the supernatant flows to the clarifier tanks for discharge. In 2013 a recycle line was added from the wastewater tanks to the raw water line. Wastewater is recycled when possible, however the rate of recycling is limited to 10% of plant flow. When this rate needs to be exceeded due to treatment challenges, the wastewater is discharged to the reservoir. The settled solids are removed from the sludge thickener tank by a tanker and transported for disposal. Sodium thiosulfate is used for dechlorination.

The following are the proposed upgrades at the facility. LT2 upgrades, including installation of post filtration UV disinfection, addition of chlorine dioxide, switching from 0.8% solution strength hypochlorite to 12.5% hypochlorite, filter change from dual media (anthracite/sand) to GAC and addition of coagulant aid and filter aid polymers.

Summary of Review

All the chemicals listed in the application are used for the treatment of drinking water except sodium thiosulfate which is used for wastewater treatment (dechlorination).

Review of dmrs show few effluent violations during past year for TSS, Total Aluminum and Total Manganese.

The Christina River Basin Total Maximum Daily Load (TMDL) for nutrients and dissolved oxygen for low-flow conditions was issued by the EPA in January 2001 and revised in October 2002 and April 2006. Page 44 of the original report says that water filtration plant backwash facilities were not included in the allocation analysis, since a model run covering all small discharges (0.25 mgd or less) indicated that the daily average DO and minimum DO were protected at all locations in the Christina River Basin. Summary Table 13 in the TMDL report lists the permit number, a flow of 0.14 mgd, and values in the wasteload allocation columns that correspond to the characteristic (default) concentrations (except for CBOD₅) for Water Filtration Plants, listed in Table 6-4 in the EPA report Hydrodynamic and Water Quality Model of Christina River Basin. Default for CBOD₅ was listed as 2.0 mg/l but Table 13 lists 10 mg/l. The current NPDES permit included the TMDL parameters with limits, to be in consistent with EPA TMDL requirements.

On June 27, 2012 the Department of Environmental Protection (DEP) submitted "Alternate Reduction Scenario" to EPA's 2006 Addendum to Christina River Basin Low-Flow TMDL for review and approval to USEPA Region 3. On August 29, 2012, EPA provided written notification of their acceptance of DEP's proposed alternative reduction scenario for Christina River Basin Low-Flow TMDL in Chester County, PA. EPA's 2006 Addendum to the TMDL (Addendum) provides one scenario for load reductions that, together with other sources' reductions, result in achieving water quality standards throughout the length of the impaired waterbody. The Addendum contemplates the development of, and is sufficiently flexible to allow for, an alternative reduction scenario that also demonstrates that water quality standards are met throughout the length of the impaired waterbody, without the need for a formal TMDL revision, given the dynamic nature of NPDES permits in TMDL waters. The aggregate sum of the wasteload allocations is unchanged and there are no changes to the total loading by basin or subwatershed segment. The alternative reduction scenario, as approved by EPA with wasteload allocation for all the dischargers was published in PA Bulletin Document No. 12-2146d. The wasteload allocations for Rock Run WFP listed in the PA Bulletin are similar to the allocations in the original TMDL report except for TN.

Review of the records from last permit renewal indicates that there was an error in the Pennsylvania's Alternative Reduction Scenario for Christina River Basin Low-Flow TMDL dated June 27, 2012 for Rock Run WFP and assigned the original TMDL net wasteload allocations for NH3-N, TP and TN for this facility. Accordingly, the same limits are carried over to the new permit.

Christina River Basin High-Flow TMDL for Fecal Coliform=2 # /100 ml (Geo. Mean), and for TSS=20 mg/l for this facility. These existing limits are also carried over to the new permit.

File review shows that limits for CBOD₅ (10 mg/l Avg. Monthly) and TSS (20 mg/l Avg Monthly) have been continued in renewal permits since prior to the year 2000.

The Department's guidance document, Technology-Based Control Requirements for Water Treatment Plant Wastes (362-2183-003), includes BPT effluent requirements for filter backwash, as indicated in the following table. These have been applied previously and continue, except for parameters with WQ limits that are already lower (Suspended Solids and Aluminum).

Parameter	Monthly Avg (mg/l)	Daily Max (mg/l)
Suspended Solids	30	60
Iron (Total)	2	4
Aluminum (Total)	4	8
Manganese (total)	1	2
Flow	Monitor	
рН	6 – 9 at all times	
Total Residual Chlorine	0.5	1.0

DRBC Docket No. D-2006-036 CP-2 was approved for this discharge on September 10, 2014. The effluent limits in the current NPDES permit are consistent or more stringent than the effluent limits listed in the docket.

Summary of Review

A "Reasonable Potential Analysis" determined the following parameters were candidates for limitations & monitoring:

Parameter	Monthly Ave. Conc (ug/l)	Maximum Daily Conc. (ug/l)	Inst. Max. (ug/l)	Recommendation/Basis
Total Aluminum	750	1,145	1,145	Continue existing limit/TMS v.1.3
Hexavalent Chromium*	15.9	24.8	39.7	Monitoring/TMS v.1.3
Total Copper***	12.7	19.4	19.4	Report/TMS v.1.3
Dissolved Iron	Report	Report	Report	Monitoring/TMS v.1.3
Total Iron	Report	Report	Report	Existing limit/TMS v.1.3
Total Manganese	1,526	2,381	3,816	Continue existing limit/TMS v.1.3
Total Thallium**	0.37	0.57	0.92	Monitoring/TMS v.1.3
Chlorodibromomethane	4.91	7.67	12.3	Limit/TMS v.1.3
Chloroform	35.0	54.6	87.5	Limit/TMS v.1.3
Dichlorobromomethane	5.83	9.1	14.6	Limit/TMS v.1.3

^{*}Only three samples are available. Recommend monitoring to collect more data and will be re-evaluated at the next renewal.

Following are the recommended effluent limits:

PARAMETER	AVERAGE MONTHLY LIMIT (mg/l)	BASIS
CBOD5	10	TMDL
Total Suspended Solids	20	TMDL
Ammonia-Nitrogen(effluent net)	0.10	TMDL
Total Nitrogen (effluent net)	0.24	TMDL
Total Phosphorus (effluent net)	0.10	TMDL
Dissolved Oxygen	5.0 Inst. Minimum	TMDL
pH	6.0 – 9.0 SU	BPT
Total Aluminum	0.8	Existing limit/previous calculation
Total Iron	2.0	BPT
Total Manganese	1.0	BPT
Total Residual Chlorine	0.5	BPT
Chlorodibromomethane*	Report/0.005 (final limit)	TMS
Dichlorobromomethane*	Report/0.006 (final limit)	TMS
Chloroform*	Report/0.035 (final limit)	TMS
Total Dissolved Solids	1,000	DRBC
Fecal Coliform	2 #/100 ml (Geo. Mean)	TMDL
Total Copper	Report	TMS/BPJ
Hexavalent Chromium	Report	TMS
Dissolved Iron	Report	TMS

^{**}Only three samples are available, and two results are reported as non-detectable. Recommend monitoring to collect more data and will be re-evaluated at the next renewal.

^{***} Review of copper data shows mostly non-detect results except for summer months which is directly linked to the addition of copper sulfate in the reservoir during summer months. This reservoir has a long history of having high nutrients due to the runoff from the adjacent Coatesville Country Club (Golf). This has caused major algae issues. Permittee has tried various different ways to reduce and control algae in the reservoir - discussion with golf course operations, various treatment trials and mechanisms in the reservoir including SolarBees, LG sonic units - and have had the most success using copper sulfate. Since intake water from, and the discharge to, the same water body, we want to collect data to see if the facility is contributing any copper to the discharge. Monitoring for Copper - intake, effluent and effluent net are incorporated into the new permit. The data will be evaluated at the next renewal. Currently the facility recycles the wastewater and there is no discharge for the past many months.

^{****}TMS report is also attached.

	Summary of Review	
Total Thallium	Report	TMS

*Despite the continuing efforts by the facility to reduce the trihalomethanes (disinfection by-products), the discharge consistently shows elevated concentrations for chloroform, chlorodibromomethane, and dichlorobromomethane. Effluent limits for these parameters are included in the permit with a compliance time of 3 years.

Public Participation

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Act 14 Notifications:

West Caln Township - January 28, 2021 Chester County - January 28, 2021

Permit Conditions:

- A. Acquire Necessary Property Rights
- B. Proper Sludge Disposal
- C. BAT/ELG Reopener
- D. Chlorine Optimization
- E. Intake Monitoring
- F. Chemical Additives
- G. Schedule of Compliance

☑ Other Pollutants without Limits or Monitoring

The following pollutants do not require effluent limits or monitoring based on water quality because reasonable potential to exceed water quality criteria was not determined and the discharge concentration was less than thresholds for monitoring, or the pollutant was not detected and a sufficiently sensitive analytical method was used (e.g., <= Target QL).

Pollutants	Governing WQBEL	Units	Comments
Total Dissolved Solids (PWS)	N/A	N/A	PWS Not Applicable
Chloride (PWS)	N/A	N/A	PWS Not Applicable
Bromide	N/A	N/A	No WQS
Sulfate (PWS)	N/A	N/A	PWS Not Applicable
Fluoride (PWS)	N/A	N/A	PWS Not Applicable
Total Antimony	N/A	N/A	Discharge Conc < TQL

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

Outfall 001, Effective Period: Permit Effective Date through Completion of Year 3 of the Permit*.

			Monitoring Requirements					
Parameter	Mass Units	(lbs/day) ⁽¹⁾		Concentrat	Minimum ⁽²⁾	Required
