Summary of Review

The PA Department of Environmental Protection (PADEP/Department) received an NPDES permit renewal application from S C Engineers, Inc. (consultant) on behalf of Borough of Souderton (permittee) for permittee's Borough of Souderton WWTP (facility) on November 8, 2017. The draft permit was published in the PA Bulletin on November 24, 2018; however, it was never finalized. The permit was redrafted on January 10, 2023 and was published on PA Bulletin on January 28, 2023. A pre-draft permit was sent to the Consultant on July 20, 2023 but wasn't officially drafted or published in the PA Bulletin. This fact sheet will accompany the official 3rd draft. The current permit expired on May 31, 2018 and the permit is under administrative extension since then. This is a major sewage facility with design flow of 2.0 MGD and the treated effluent is discharged into an UNT to Skippack Creek (TSF, MF). Renewal NPDES permit applications under Clean Water program are not covered by PADEP's PDG per 021-2100-001. This fact sheet is developed in accordance with 40 CFR §124.56.

Changes in this permit: Quarterly monitoring for TDS, Total Aluminum, Total Arsenic, Total Boron, Dissolved Iron, Total Zinc, and Chlorodibromomethane. Limits with schedule for Free Cyanide, Total Iron, Total Thallium, Dichlorobromomethane, and Chloroform. Monthly monitoring for E. Coli and Total Nitrogen, annual monitoring for PFOA, PFOS, PFBS, and HFPO-DA.

Sludge use and disposal description and location(s): Aerobic digestion and dewatering by means of a belt filter press. Digested and dewatered sludge is used under PAG08 in mine sites in Schuylkill County.

Public Participation

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Other Comments:

Streamflow:

USGS's web based watershed delineation tool StreamStats (accessible at <https://streamstats.usgs.gov/ss/>, accessed on October 18, 2022) was utilized to determine the drainage area and low flow statistics of the receiving stream at discharge point. The drainage area was found to be 1.76 mi². The previous fact sheet accompanying the 2018 draft stated that "since the point of discharge is located only 0.09 mile from the main stem of the Skippack Creek, the model was utilized as if the discharge was directly to the main stem of Skippack Creek at RMI 14.05 (*corrected to 13.88*) This was done to ensure a sufficient stream length was modeled to observe the effects of DO lag. The Q₇₋₁₀ at river mile 14.05 (*corrected to 13.88*) of Skippack Creek was estimated as 0.0925-cfs (*changed to 0.099 cfs*)." The drainage area at Node 1 (at Skippack Creek RMI 13.88) is found to be 2.91 mi², which is outside of suggested range and other flow estimates may produce extrapolated results with unknow error. To avoid this, a default low flow yield of 0.1 cfs/mi², Q₁₋₁₀:Q₇₋₁₀ ratio of 0.64, and Q₃₀₋₁₀:Q₇₋₁₀ ratio of 1.36 will be utilized in modeling.

$$Q_{7-10} \text{ runoff rate} = 0.1 \text{ cfs/mi}^2$$

$$Q_{7-10} = 0.1 \text{ cfs/mi}^2 * 2.91 \text{ mi}^2 = 0.291 \text{ cfs}$$

PWS Intake:

The nearest downstream public water supply is Aqua PA Main on Perkiomen Creek, in Lower Merion Township at RMI 0.9. Its approximately 15.98 miles downstream of Outfall 001. Discharge from this facility is expected not to impact the PWS intake. The distance is calculated as follows:

| | |
|---|----------|
| + Outfall 001 RMI at UNT to Skippack Creek (01119) ----- | 0.09 mi |
| + RMI on Skippack Creek (01024) at confluence with 01119 ----- | 13.88 mi |
| + RMI on Perkiomen Creek (01017) at confluence with 01024 ----- | 2.91 mi |
| - PWS RMI at 01017 ----- | 0.9 mi |
| <hr/> | |
| Total 15.98 miles | |

Wastewater Characteristics:

A 90th percentile pH of 7.2 was calculated from daily DMR from October 1, 2024 through September 30, 2025. The application data indicated an average Total Hardness of 164 mg/l out of 3 samples. A default temperature of 20°C will be used for modeling.

Background data:

There is no nearby WQN station to calculate background pH, temperature, or hardness. The permit application indicated an average upstream hardness of 209 mg/l from data collected between 2015-2017. A default stream pH of 7.0 S.U. and temperature of 20°C will be used for modeling.

Skippack Creek Total Maximum Daily Load (TMDL):

Skippack Creek is a 15.2-mile stream located in sub-sub-basin 03E, Montgomery County, PA. it is a tributary to Perkiomen Creek whose drainage basin is composed of urban, suburban, agricultural, and rural components. Skippack Creek begins within Souderton Borough limits and flows generally southwest to its confluence with Perkiomen Creek at RMI 3.0. The Skippack Creek TMDL was finalized in April 9, 2005 for Sediments and Nutrients. There were 11 active NPDES permitted point source discharges in the watershed including 7 STPs, 1 meat packing plant, 1 dairy farm, and 2 manufacturers. No reduction for sediment load from point sources were proposed in the final TMDL. The nutrient portion of the TMDL was withdrawn in summer of 2007. No WLA was assigned to this treatment plant. The effluent limitations in the permit will be applied in a way that the discharge from this facility will not add to the existing impairment of the receiving stream.

Antidegradation (93.4):

The effluent limits for this discharge have been developed to ensure that existing in-stream water uses and the level of water quality necessary to protect the existing uses are maintained and protected. The receiving streams are designated as Trout Stocking (TSF) and Migratory Fishes (MF.)

Class A Wild Trout Fisheries:

No Class A Wild Trout Fisheries are impacted by this discharge. The secondary receiving stream, Skippack Creek, is a stocked trout water. The existing permit has a minimum DO limit of 6.0 mg/l as minimum to protect the stocked trout. This requirement will be carried over during this renewal.

| Treatment Plant Description |
|-----------------------------|
|-----------------------------|

Borough of Souderton WWTP is a 2.0 MGD Major Sewer Facility (MASF1) located in Souderton Borough, Montgomery County which discharges treated sewage through Outfall 001 into an UNT to Skippack Creek in state watershed 3-E. The WWTP incorporates aerated grit removal, extended aeration for BOD5 removal and nitrification, ferrous sulfate addition for phosphorus removal, final clarification, chlorination, and post aeration. The treated effluent is discharged through Outfall 001. Outfall 002 is a stormwater only outfall.

The facility receives flows mostly from Souderton Borough and small contributions from few other municipalities:

| Municipalities served | Flow contribution (%) | Type of Sewer System | | Population |
|-----------------------|-----------------------|----------------------|--------------|------------|
| | | Separate (%) | Combined (%) | |
| Souderton Borough | 88 | 100 | 0 | 11,130 |
| Franconia Township | 11 | 100 | 0 | 1,360 |
| Hilltown Township | 1 | 100 | 0 | 125 |

There is one significant and categorical industry that discharges to this WWTP. Leidy's Inc. is in Franconia Township that discharged approximately 59,250 gallons to the WWTP in 2016. The facility is a categorical industry under pretreatment standard as coded in 40 CFR Part 432-Meat and Poultry Products Point Source Category (pork slaughterhouse). The permit application indicated that an industrial user permit been issued to Leidy's Inc.

Per PADEP's most recent site inspection on August 12, 2025, the WWTP consists of the following treatment units:

One influent screen, one grit removal, two aeration basins, two secondary clarifiers, two chlorine contact tanks, one dechlorination system, two aerobic digesters, and one belt filter press.

The following chemicals are used as wastewater treatment chemicals:

| Chemical name | Purpose | Maximum use rate | Units |
|-----------------|------------------------|------------------|----------|
| Ferrous Sulfate | Phosphorus coagulation | 250 | GPD |
| Chlorine | Disinfection | 50 | Lbs./day |
| Sulfur Dioxide | Dechlorination | 25 | Lbs./day |

Biosolids Management:

Sludge handling for this WWTP includes aerobic digestion and dewatering by means of a belt filter press. Before dewatering, polymer is measured and mechanically blended with the liquid biosolids. Digested and dewatered sludge is used under PAG08 in mine sites in Schuylkill County.

Compliance History

Effluent Violations for Outfall 001, from: October 1, 2024 To: August 31, 2025

| Parameter | Date | SBC | DMR Value | Units | Limit Value | Units |
|------------------|----------|--------|-----------|------------|-------------|------------|
| Fecal Coliform | 04/30/25 | IMAX | 1100 | CFU/100 ml | 1000 | CFU/100 ml |
| Total Phosphorus | 08/31/25 | Avg Mo | 1.26 | mg/L | 1.0 | mg/L |

Other Comments: The Non-compliance report submitted with April 2025 eDMR stated that the cause of April violation was due to chlorine gas injector spring broke during sample collection. The issue was identified and replaced the broken injector with a new one. No justification was provided for August TP exceedance.

Summary of Inspections:

August 12, 2025: FUI conducted on November 18 2024 (facility was cited for not having an employee or contractor who held a Class E, sub-class 4 certification required) and June 9 2025 (Operators passed the WWE4 test and application for license upgrade). The FUI addressed the concerns regarding these issues. No violations noted during the inspection.

June 9, 2025: INCDT inspection conducted in response to discharge containing floating materials, scums, sheen, foam, oil, grease or substances that produced an observable change or resulted in deposits in receiving waters. On June 8 2025, the PADEP's Emergency Response was notified of a fish kill in Skippack Creek in

the vicinity of Creekside Drive. DEP's responder observed both live and dead fish in the waterway. Turbidity from an active residential development was observed entering the creek. No increase of sedimentation was observed immediately downstream of this point. Above this point what seemed to be scattered STP clarifier solids were observed in the creek. The deposits became heavier as the waterway was walked up to the STP outfall. Numerous dead fish, mostly catfish, were observed upstream of the development discharge point. No live fish were observed. The solids deposition and dead fish were tracked up to the STP outfall. No solids deposition or dead fish were observed from the outfall upstream to the Cowpath Road bridge. Numerous live fish were observed above the outfall. At the time of the investigation the B side treatment tank was out of service for maintenance work. The A side treatment tank was reportedly operating normally. Effluent at the flume looked normal. Monitoring results were normal.

June 2, 2025: INCDT inspection conducted as a response to an SSO on May 30th. Sewage was intermittently discharging from a vent stack between 358 and 360. During the inspection, no residues or obvious negative impact was evident at the down gradient stormwater inlet or below the stormwater outfall point at West Street Park.

November 18, 2024: CEI conducted. Violation noted for failure to employ an operator with a valid, appropriate certificate required for operation of the collection system and pump stations (Class E, sub-class 4).

July 18, 2024: INCDT conducted. Violation noted for failure to orally notify DEP within 4 hours of a pollution incident or submit written report within 5 days of incident.

April 18, 2024: COMPL inspection conducted for a residential odor complaint that was occurring over past couple years. No malodor was observed during the inspection.

January 10, 2024: INCDT inspection conducted. Violations noted including SSO and STP treatment unit overflow, which are unpermitted discharge. The violations were immediately corrected.

October 23, 2023: CEI conducted. No violations noted.

September 5, 2023: INCDT conducted. Violations noted including failure to take necessary measures to prevent pollutants from reaching waters of the Commonwealth that resulted in a fish kill.

March 30, 2023: FUI conducted on October 7, 2022 NOV that was a result of October 4, 2022 inspection. No violations noted during the inspection. The facility stated that they'll install monitoring cameras so that the staffs can react quicker to changing conditions. The permittee's actions corrected two cited violations.

December 16, 2022: RTPT conducted. Violation noted for unauthorized, unpermitted discharge; and sample results exceeding permitted limits.

October 4, 2022: CEI conducted. Unpermitted discharge due to overflow from A side of the treatment tank aeration unit on September 6, 2022. The permittee reported this SSO. An NOV was issued on later date.

May 31, 2022: RTPT conducted. No violation noted during the inspection. Increased algal growth was observed at and immediately below outfall 001. Outfall 002 looked normal. The basin was dry and no obvious contamination was evident.

10/19/2021: CEI conducted. No violation noted during the inspection. A greater than normal deposition of plant solids was observed in the first pool downstream of the outfall, which may be due to side B clarifier issue. No issues were evident below this point.

NPDES Permit Fact Sheet
Borough of Souderton WWTP

NPDES Permit No. PA0021857

07/20/2021: RTPT conducted. No violation noted.

10/08/2020: CEI conducted. No violation noted. Increased algal growth was present at and immediately below the outfall. Some normal settled solids were present in the first downstream pool.

04/13/2020: ADMIN review conducted. No violation noted. The facility didn't have issues with necessary materials supply due to COVID.

Water Quality-Based Limitations

WQM 7.0:

The following data were used in the attached computer model (WQM 7.0) of the stream:

- Discharge pH 7.2 (Daily eDMR data, Oct 1 2024-Sep 30 2025)
- Discharge Temperature 20°C (Default)
- Discharge Hardness 164 mg/l (Application data)
- Stream pH 7.0 (Default)
- Stream Temperature 20°C (Default)
- Stream Hardness 209 mg/l (Application data)

The following two nodes were used in modeling:

Node 1: At the confluence of UNT 01119 to Skippack Creek with Skippack Creek (01024) at Skippack Creek RMI 13.88

Elevation: 265.75 ft (USGS TNM 2.0 viewer, 10/17/2022)
 Drainage Area: 2.91 mi² (StreamStat Version 3.0, 10/17/2022)
 River Mile Index: 13.88 (PA DEP eMapPA)
 Low Flow Yield: 0.1 cfs/mi²
 Discharge Flow: 2.0 MGD

Node 2: At confluence with UNT 01115 with Skippack Creek (01024)
 Elevation: 237.18 ft (USGS TNM 2.0 viewer, 10/17/2022)
 Drainage Area: 4.57 mi² (StreamStat Version 3.0, 10/17/2022)
 River Mile Index: 13.18 (PA DEP eMapPA)
 Low Flow Yield: 0.1 cfs/mi²
 Discharge Flow: 0.0 MGD

Ammonia (NH₃-N), Carbonaceous Biochemical Oxygen Demand (CBOD₅), & Dissolved Oxygen (DO):

WQM 7.0 version 1.0b is a water quality model designed to assist DEP to determine appropriate effluent limits for CBOD₅, NH₃-N and DO. The model simulates two basic processes. In the NH₃-N module, the model simulates the mixing and degradation of NH₃-N in the stream and compares calculated instream NH₃-N concentrations to NH₃-N water quality criteria. In the D.O. module, the model simulates the mixing and consumption of D.O. in the stream due to the degradation of CBOD₅ and NH₃-N and compares calculated instream D.O. concentrations to D.O. water quality criteria. The model was utilized for this permit renewal by using Q₇₋₁₀ and current background water quality levels of the stream.

NH₃-N:

WQM 7.0 suggested NH₃-N limit of 1.8 mg/l as monthly average and 3.6 mg/l as IMAX limit during summer to protect water quality standards. These values are the same as existing permitted limits. The average monthly mass loading is calculated to be 30.0 lbs./day. The existing winter season limits of 3.6 mg/l as average monthly and 7.2 mg/l as IMAX limit will be carried over in this renewal. Winter average monthly mass limit was calculated as 60.0 lbs./day, which is the same as in the existing permit and will remain unchanged.

CBOD₅:

The WQM 7.0 model suggests a monthly average CBOD₅ limit of 15 mg/l. The average monthly and average weekly mass loadings were calculated as 250 lbs./day and 375 lbs./day respectively. These values are the same as existing permit with the exception of weekly mass limit which is believed to be miscalculated in previous permit. The weekly average limit should be 1.5 times of monthly average values. The current permit has winter season average monthly, weekly average, and IMAX limit of 25 mg/l, 40 mg/l, and 50 mg/l, respectively, which will be carried over in this renewal. Seasonal limit for CBOD₅ is allowed in PADEP's guidance ⁽¹⁾. The mass limit for winter season is calculated to be 417 lbs./day as monthly average and 667 lbs./day as weekly average which are the same as existing permit and will be carried over. Minimum monitoring frequency will remain the same as 2/week, 24-hr composite sampling.

Dissolved Oxygen (DO):

A minimum of 6.0 mg/L for D.O. is necessary to protect the designated use of the receiving stream and is supported by the output from WQM 7.0 modeling and consistent with Ch. 93.7. This limit will be applied in the draft permit.

Toxics:

Based on the available data, PADEP utilizes Toxics Management Spreadsheet (TMS) to (1) evaluate reasonable potential for toxic pollutants to cause or contribute to an excursion above the water quality standards and (2) develop WQBELs for those such toxic pollutants (i.e., 40 CFR § 122.44(d)(1)(i)). It is noteworthy that some of these pollutants that may be reported as "non-detect", but still exceeded the criteria, were determined to be candidates for modeling because the method detection levels used to analyze those pollutants were higher than target QLs and/or the most stringent Chapter 93 criteria. The model then recommended the appropriate action for the Pollutants of Concerns based on the following logic:

1. In general, establish limits in the draft permit where the effluent concentration determined in B.1 or B.2 equals or exceeds 50% of the WQBEL (i.e., RP is demonstrated). Use the average monthly, maximum daily and instantaneous maximum (IMAX) limits for the permit as recommended by the TMS (or, if appropriate, use a multiplier of 2 times the average monthly limit for the maximum daily limit and 2.5 times the average monthly limit for IMAX).
2. For non-conservative pollutants, in general, establish monitoring requirements where the effluent concentration determined in B.1 or B.2 is between 25% - 50% of the WQBEL.
3. For conservative pollutants, in general, establish monitoring requirements where the effluent concentration determined in B.1 or B.2 is between 10% - 50% of the WQBEL.

NOTE 4 – If the effluent concentration determined in B.1 or B.2 is "non-detect" at or below the target quantitation limit (TQL) for the pollutant as specified in the TMS and permit application, the pollutant may be eliminated as a candidate for WQBELs or monitoring requirements unless 1) a more sensitive analytical method is available for the pollutant under 40 CFR Part 136 where the quantitation limit for the method is less than the applicable water quality criterion and 2) a detection at the more sensitive method may lead to a determination that an effluent limitation is necessary, considering available dilution at design conditions.

(1) 362-0400-001 /10/1/97 /Chapter 5/Page 9

NOTE 5 – If the effluent concentration determined in B.1 or B.2 is a detection below the TQL but above or equal to the applicable water quality criterion, WQBELs or monitoring may be established for the pollutant.

4. Application managers may, on a site- and pollutant-specific basis, deviate from these guidelines where there is specific rationale that is documented in the fact sheet.

The permittee collected additional 7 samples for metals and Free Cyanide and 8 samples for volatiles. The results were plugged into TOXCONC to calculate Average Monthly Effluent Concentration (AMEC) and daily Coefficient of Variation (CoV). The calculated AMEC and daily CoV were the input of the TMS. The below table summarizes the output from TOXCONC:

| Facility: Souderton WWTP NPDES #: PA0021857 Outfall No: 001 n (Samples/Month): 4 | | Reviewer/Permit Engineer: Reza Chowdhury | |
|---|----------------------|---|--------------|
| Parameter | Distribution Applied | Coefficient of Variation (daily) | Avg. Monthly |
| Aluminum (mg/L) | Delta-Lognormal | 0.5706911 | 0.1000000 |
| Arsenic (mg/L) | Delta-Lognormal | 1.0673208 | 0.0017680 |
| Boron (mg/L) | Lognormal | 0.4204188 | 0.2581798 |
| Thallium (mg/L) | Delta-Lognormal | 0.7815752 | 0.0008395 |
| Total Iron (mg/L) | Lognormal | 0.9154847 | 1.5348368 |
| Dissolved Iron (mg/L) | Lognormal | 0.5246481 | 0.1045980 |
| Zinc (mg/L) | Lognormal | 0.1884892 | 0.0500019 |
| Free Cyanide (mg/L) | Delta-Lognormal | 0.8141347 | 0.0067171 |
| Dibromochloromethane (µg/L) | Delta-Lognormal | 0.2069230 | 0.6437623 |
| Chloroform (µg/L) | Lognormal | 0.2249950 | 9.3333630 |
| Bromodichloromethane (µg/L) | Lognormal | 0.1816746 | 2.5639903 |
| Total Copper (µg/L) | Lognormal | 0.6338101 | 35.3683475 |

The below table summarizes the output from TMS:

☒ **Recommended WQBELs & Monitoring Requirements**

No. Samples/Month: 4

Each of the parameters are discussed below:

Total Aluminum: TMS suggests monitoring for Total Aluminum based on model input AMEC of 0.1 mg/l and daily CoV of 0.57. A quarterly monitoring requirement will provide sufficient effluent results for a Reasonable Potential analysis during next permit term.

Total Arsenic: TMS suggests monitoring for Total Arsenic based on model input AMEC of 0.00177 mg/l and daily CoV of 1.067. A quarterly monitoring requirement will provide sufficient effluent results for a Reasonable Potential analysis during next permit term.

Total Boron: TMS suggests monitoring for Total Boron based on model input AMEC of 0.258 mg/l and daily CoV of 0.42. A quarterly monitoring requirement will provide sufficient effluent results for a Reasonable Potential analysis during next permit term.

Free Cyanide: RP has been demonstrated and TMS suggests numeric limit for Free Cyanide based on model input AMEC of <0.0067 mg/l and daily CoV of 0.814. The model suggested AML of 4.00 ug/l, MDL of 8.00 ug/l, IMAX of 11.0 ug/l, and calculated average monthly mass limit of 0.073 lbs./day and MDL of 0.13 lbs./day. Since this is a new pollutant with limits requirements, a schedule will be provided to meet the final WQBEL.

Dissolved Iron: TMS suggests monitoring for Dissolved Iron based on model input AMEC of 0.104 mg/l and daily CoV of 0.52. A quarterly monitoring requirement will provide sufficient effluent results for a Reasonable Potential analysis during next permit term.

Total Iron: RP has been demonstrated and TMS suggests numeric limit for Total Iron based on model input AMEC of 1.535 mg/l and daily CoV of 0.915. The model suggested AML of 1.64 mg/l, MDL of 2.96 mg/l, IMAX of 4.1 mg/l, and calculated average monthly mass limit of 27.4 lbs./day and MDL of 49.4 lbs./day. Since this is a new pollutant with limits requirements, a schedule will be provided to meet the final WQBEL.

Total Thallium: RP has been demonstrated and TMS suggests numeric limit for Total Thallium based on model input AMEC of 0.00084 mg/l and daily CoV of 0.78. The model suggested AML of 0.0003 mg/l, MDL of 0.0005 mg/l, IMAX of 0.0007 mg/l, and calculated average monthly mass limit of 0.004 lbs./day and MDL of 0.008 lbs./day. Since this is a new pollutant with limits requirements, a schedule will be provided to meet the final WQBEL.

Total Zinc: TMS suggests monitoring for Total Zinc based on model input AMEC of 0.05 mg/l and daily CoV of 0.188. A quarterly monitoring requirement will provide sufficient effluent results for a Reasonable Potential analysis during next permit term.

Chlorodibromomethane: TMS suggests monitoring for Chlorodibromomethane based on model input AMEC of 0.644 ug/l and daily CoV of 0.207. A quarterly monitoring requirement will provide sufficient effluent results for a Reasonable Potential analysis during next permit term.

Chloroform: RP has been demonstrated and TMS suggests numeric limit for Chloroform based on model input AMEC of 9.33 ug/l and daily CoV of 0.224. The model suggested AML of 6.24 ug/l, MDL of 7.9 ug/l, IMAX of 15.6 ug/l, and calculated average monthly mass limit of 0.1 lbs./day and MDL of 0.13 lbs./day. Since this is a new pollutant with limits requirements, a schedule will be provided to meet the final WQBEL.

Dichlorobromomethane: RP has been demonstrated and TMS suggests numeric limit for Dichlorobromomethane based on model input AMEC of 2.56 ug/l and daily CoV of 0.182. The model suggested AML of 1.73 ug/l, MDL of 2.1 ug/l, IMAX of 4.31 ug/l, and calculated average monthly mass limit of 0.029 lbs./day and MDL of 0.035 lbs./day. Since this is a new pollutant with limits requirements, a schedule will be provided to meet the final WQBEL.

Total Copper: Total Copper had monitoring requirement in current permit. The 2018 draft permit utilized results from 2015 WER study. The 2015 WER study wasn't approved by EPA. Based on the PA Bulletin publication dated August 12, 2006, the approved WER (Total Recoverable) was 2.55 and hardness was 143 mg/l. The bulletin also published the revised CCCrs of 25.9 ug/l and 40.1 ug/l. However, the equations to calculate CCCr and CMCr are changed. The new equations per Ch. 93.8c(b) Table 5 are as follows:

$$\begin{aligned}\text{CCCr: } & 0.960 \times \text{Exp}^{(0.8545 \times \ln[\text{H}]-1.702)} \\ \text{CMCr: } & 0.960 \times \text{Exp}^{(0.9422 \times \ln[\text{H}]-1.700)}\end{aligned}$$

Utilizing a published hardness of 143 mg/l, the equations resulted in CCCr of 12.16 ug/l and CMCr of 18.82 ug/l. The revised CCCr is 31 ug/l and CMCr is 48 ug/l. These values were plugged into the TMS as revised criteria for Souderton WWTP. Weekly eDMR data for the months July-September for the years 2018-2025 were plugged into TOXCONC to calculate AMEC and Daily CV. Calculated AMEC is 35.37 ug/l and Daily CV is 0.63. These values were the input of TMS and the model suggested AML of 33.9 ug/l, MDL of 56.5 ug/l, and IMAX of 84.8 ug/l. The calculated mass-based AML is 0.57 lbs./day and MDL is 0.94 lbs./day. A discussion between PADEP's CO and USEPA with regional upper management indicated that the permittee that conducted WER study and current monitoring was based on WER study will be allowed to continue monitor for one more permit term given that the permittee will be required to submit BLM work plan within 12 months from the permit's effective date and follow-up with BLM study and final report. Based on this discussion, it is decided that the Borough of Souderton will continue monitoring for Total Copper for this permit term.

Whole Effluent Toxicity Testing (WETT):

The permittee submitted five (5) WET Test results (annually for years 2012-2016) with the renewal application. The PADEP requested and obtained additional WETT reports for the years 2017-2025. All these reports were analyzed for QA/QC and the WETT reports for 2022-2025 (four) were evaluated for RP analysis. All four valid WET test results showed "Pass" for all end points. The dilution series is updated. The TIWCc was calculated to be 97% to evaluate the test results for a stream flow of 0.0829 cfs, discharge flow of 2.0 MGD, and PMFa/PMFc of 1. The WET tests are discussed in detail on pages 17-18 of this report.

Additional Considerations

Fecal Coliform:

The recent coliform guidance in 25 Pa. code § 92a.47.(a)(4) requires a summer technology limit of 200/100 ml as a geometric mean and an instantaneous maximum not greater than 1,000/100ml and § 92a.47.(a)(5) requires a winter limit of 2,000/100ml as a geometric mean and an instantaneous maximum not greater than 10,000/100ml. Delaware River Basin Commission's (DRBC's) Water Quality Regulations at Section 4.30.4.A requires that during winter season from October through April, the instantaneous maximum concentration of fecal coliform organisms shall not be greater than 1,000 per 100 milliliters in more than 10 percent of the samples tested. Therefore, the summer limit is governed by DEP's regulation while winter limit is governed by DRBC's regulation. These are existing limits and will be carried over.

E. Coli:

Pa Code 25 § 92a. 61 requires monitoring of E. Coli. DEP's SOP titled "Establishing Effluent Limitations for Individual Sewage Permits (BCW-PMT-033, revised March 24, 2021) recommends monthly E. Coli monitoring for major sewage dischargers. This requirement will be applied from this permit term.

pH:

The TBEL for pH is above 6.0 and below 9.0 S.U. (40 CFR §133.102(c) and Pa Code 25 §§ 95.2(1), 92a.47) which are existing limits and will be carried over.

Total Suspended Solids (TSS):

There is no water quality criterion for TSS. The existing limits of 30 mg/L average monthly, 45 mg/l average weekly, and 60 mg/L instantaneous maximum will remain in the permit based on the minimum level of effluent quality attainable by secondary treatment, 25 Pa. Code § 92a.47 and 40CFR 133.102(b). The mass based average monthly and weekly average limits are calculated to be 500 lbs./day and 750 lbs./day respectively, which are the same as were in existing permit.

Total Residual Chlorine (TRC):

The attached computer printout utilizes the equation and calculations as presented in the Department's 2003 Implementation Guidance for Total Residual Chlorine (TRC) (ID#391-2000-015) for developing chlorine limitations. The attached printout indicates that a water quality limit of 0.013 mg/l would be needed to prevent toxicity concerns at the discharge point for Outfall 001. The Instantaneous Maximum (IMAX) limit is 0.041 mg/l. The current permit has average monthly limit of 0.012 mg/l and IMAX limit of 0.038 mg/l which are very close to the recalculated limits and the existing limits will be carried over.

Flow and Influent BOD₅, CBOD₅, and TSS Monitoring Requirement:

The requirement to monitor the volume of effluent will remain in the draft permit per 40 CFR § 122.44(i)(1)(ii). Influent BOD₅ and TSS monitoring requirements are established in the permit per the requirements set in Pa Code 25 Chapter 94. To demonstrate 85% removal efficiency, influent CBOD₅ will be added in the permit.

Total Dissolved Solids (TDS):

DRBC's basin-wide criteria (DRBC reg 3.10.4.D.2) requires monitoring for TDS. Therefore, a quarterly monitoring for TDS will be added in this renewal.

Best Professional Judgement (BPJ):

Total Phosphorus:

The current permit has a summer average monthly limit of 1.0 mg/l, IMAX of 2.0 mg/l, and mass-based average monthly limit of 16.5 lbs./day. The winter limits are 2.0 mg/l as average monthly, 4.0 mg/l as IMAX, and mass-based average monthly limit of 33.0 lbs./day. These limits will be carried over.

Total Nitrogen: Under the authority of Pa Code 25 § 92a.61, monthly monitoring will be added.

PFOA, PFOS, HFPO-DA and PFBS:

Per BCW-PMT-033 (revised February 5, 2024) and under the authority of Pa Code 25 § 92a.61, annual monitoring for PFOA, PFOS, HFPO-DA, and PFBS will be added in this renewal with a footnote that will read:

“The permittee may discontinue monitoring for PFOA, PFOS, HFPO-DA, and PFBS if the results in 4 consecutive monitoring periods indicate non-detect results at or below Quantitation Limits of 4.0 ng/L for PFOA, 3.7 ng/L for PFOS, 3.5 ng/L for PFBS and 6.4 ng/L for HFPO-DA. When monitoring is discontinued, permittees must enter a No Discharge Indicator (NODI) Code of “GG” on DMRs.”

Monitoring Frequency and Sample Types:

Otherwise specified above, the monitoring frequency and sample type of compliance monitoring for existing parameters are recommended by DEP's SOP and Permit Writers Manual and/or on a case-by-case basis using best professional judgment (BPJ).

Anti-Backsliding

The proposed limits are at least as stringent as are in existing permit, unless otherwise stated; therefore, anti-backsliding is not applicable.

Development of Effluent Limitations

Outfall No. 002
Latitude 40° 17' 40.13"
Wastewater Description: Stormwater

Design Flow (MGD) 0
Longitude -75° 19' 55.92"

Per Phase II stormwater regulations, major POTWs with point source discharge to surface waters are generally required to have a stormwater permit. The following limits are proposed for stormwater only Outfall 002:

| Parameter | Effluent Limitations | | | | | | Monitoring Requirements | |
|-----------------------------|-------------------------------------|-----|-----------------------|----------------|-----|------------------|--|----------------------|
| | Mass Units (lbs/day) ⁽¹⁾ | | Concentrations (mg/L) | | | | Minimum ⁽²⁾ Measurement Frequency | Required Sample Type |

Since the "treatment works treating domestic sewage" is considered as an "Industrial Activity" per 40 CFR §122.26(b)(14)(ix), the stormwater related to industrial activity under individual permit shall contain benchmark values. Therefore, the following benchmark values will be applied at the outfalls:

| Parameter | Benchmark Value (mg/L) |
|------------------------|------------------------|
| Chemical Oxygen Demand | 120 |
| Total Suspended Solids | 100 |

Whole Effluent Toxicity (WET)

For Outfall , ☐ **Acute** ☒ **Chronic** WET Testing was completed:

- ☐ For the permit renewal application (4 tests).
☐ Quarterly throughout the permit term.
☐ Quarterly throughout the permit term and a TIE/TRE was conducted.
☒ Other: **Annual**

The dilution series used for the tests was: 100%, 97.8%, 95.6%, 93.5%, and 91.5%. The Target Instream Waste Concentration (TIWC) to be used for analysis of the results is: 97.8%.

Summary of Four Most Recent Test Results

TST Data Analysis

(NOTE – In lieu of recording information below, the application manager may attach the DEP WET Analysis Spreadsheet).

| Test Date | Ceriodaphnia Results (Pass/Fail) | | Pimephales Results (Pass/Fail) | |
|-----------|----------------------------------|--------------|--------------------------------|--------|
| | Survival | Reproduction | Survival | Growth |
| 9/2/2025 | Pass | Pass | Pass | Pass |
| 7/2/2024 | Pass | Pass | Pass | Pass |
| 6/27/2023 | Pass | Pass | Pass | Pass |
| 5/23/2022 | Pass | Pass | Pass | Pass |

* A "passing" result is that in which the replicate data for the TIWC is not statistically significant from the control condition. This is exhibited when the calculated *t* value ("T-Test Result") is greater than the critical *t* value. A "failing" result is exhibited when the calculated *t* value ("T-Test Result") is less than the critical *t* value.

Is there reasonable potential for an excursion above water quality standards based on the results of these tests? (NOTE – In general, reasonable potential is determined anytime there is at least one test failure in the previous four tests).

☐ YES ☒ NO

Comments:

Evaluation of Test Type, IWC and Dilution Series for Renewed Permit

Acute Partial Mix Factor (PMFa): 1

Chronic Partial Mix Factor (PMFc): 1

1. Determine IWC – Acute (IWCa):

$$(Q_d \times 1.547) / ((Q_{7-10} \times \text{PMFa}) + (Q_d \times 1.547))$$

$$[(2 \text{ MGD} \times 1.547) / ((0.0829 \text{ cfs} \times 1) + (2 \text{ MGD} \times 1.547))] \times 100 = \mathbf{97.4\%}$$

Is IWCa < 1%? ☐ YES ☒ NO

If the discharge is to the tidal portion of the Delaware River, indicate how the type of test was determined:

Type of Test for Permit Renewal: Chronic

2. Determine Target IWCC (If Chronic Tests Required)

$$(Q_d \times 1.547) / (Q_{7-10} \times \text{PMFc}) + (Q_d \times 1.547)$$

$$[(2 \text{ MGD} \times 1.547) / ((0.0829 \text{ cfs} \times 1) + (2 \text{ MGD} \times 1.547))] \times 100 = 97.4\%$$

3. Determine Dilution Series

(NOTE – check Attachment C of WET SOP for dilution series based on TIWCa or TIWCc, whichever applies).

Dilution Series = 100%, 97%, 73%, 49%, and 24%.

WET Limits

Has reasonable potential been determined? ☐ YES ☒ NO

Will WET limits be established in the permit? ☐ YES ☒ NO

If WET limits will be established, identify the species and the limit values for the permit (TU).

N/A

If WET limits will not be established, but reasonable potential was determined, indicate the rationale for not establishing WET limits:

N/A

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (386-0400-001), SOPs and/or BPJ.

Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.

Other Pollutants without Limits or Monitoring

The following pollutants do not require effluent limits or monitoring based on water quality because reasonable potential to exceed water quality criteria was not determined and the discharge concentration was less than thresholds for monitoring, or the pollutant was not detected and a sufficiently sensitive analytical method was used (e.g., <= Target QL).

| Pollutants | Governing WQBEL | Units | Comments |
|---------------------------------|-----------------|-------|----------------------------|
| Total Antimony | 6.13 | µg/L | Discharge Conc ≤ 10% WQBEL |
