Applicant and Facility Information

Applicant Name	**Upper Merion Sanitary And Stormwater Authority**	Facility Name	**U Merion-Matsunk STP**
Applicant Address	175 W Valley Forge Road	Facility Address	600 Mccoys Lane
	King Of Prussia, PA 19406-1851		Swedeland, PA 19406
Applicant Contact	Anthony Hamaday	Facility Contact	Robert Mckernan
Applicant Phone		Facility Phone	(610) 275-0688
Client ID	72994	Site ID	449536
Ch 94 Load Status	Not Overloaded	Municipality	Upper Merion Township
Connection Status	No Limitations	County	Montgomery
Date Application Received	December 20, 2017	EPA Waived?	No
Date Application Accepted	May 8, 2018	If No, Reason	Major Sewage, Pretreatment
Purpose of Application	Permit Renewal.		

Summary of Review

The PA Department of Environmental Protection (PADEP/Department) received an NPDES permit renewal application for Matsunk WPCC (facility) from Upper Merion Municipal Utility Authority (new name is Upper Merion Sanitary and Stormwater Authority, UMSSA) on December 20, 2017. The permit was drafted on September 8, 2018 and redrafted on October 27, 2018 and January 8, 2021. The redraft on July 2021 was as a result of a revision of a governing SOP. The updated SOP was reviewed and necessary changes are made in the draft permit and fact sheet. The facility is a Major Facility with design flow of 5.5 MGD and HDC of 6.88 MGD. The treated effluent discharges through Outfall 002 into a culvert to Schuylkill River, WWF/MF at RMI 22.26. The existing permit expired on June 30, 2018. The terms and conditions were automatically extended since the renewal application was received at least 180 days prior to permit expiration date. Renewal NPDES permit applications under Clean Water program are not covered by PADEP's PDG per 021-2100-001. This fact sheet is developed in accordance with 40 CFR §124.56.

Changes in the permit: TDS limit, total Copper limit with schedule, DO limit updated, TN monitoring, Dry and Wet weather PCB sampling, and E. Coli monitoring

Sludge use and disposal description and location(s): Sludge is handled through gravity thickener units prior to being dewatered by a rotary press that was installed in April 2014. The dewatered cake is stabilized with lime prior to being hauled to one of two Waste Management owned landfills. The landfills are Tullytown, PA Resource Recovery Facility and GROWS North landfill in Morrisville, PA.

Public Participation

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Background/Ambient Data		Data Source
pH (SU)	7.0	Default per 391-2000-013
Temperature (°C)	25	Default per 391-2000-013 for WWF
Hardness (mg/L)	212.67	Application Data
Other:		

Nearest Downstream Public Water Supply Intake		City of Philadelphia Queen Lane	
PWS Waters	Schuylkill River	Flow at Intake (cfs)	
PWS RMI	12.59	Distance from Outfall (mi)	≈ 9.67 miles

* The facility discharges directly into Frog Run (Pa Stream Code 00942) at RMI 0.4 mi. However, since Frog Run is essentially a culvert between the point of discharge and the Schuylkill River, the point of first use has been determined to be the Schuylkill River.

Changes Since Last Permit Issuance: None

Other Comments:

Streamflow:

Streamflow will be correlated with the USGS's web-based GIS application (https://streamstats.usgs.gov/ss/) accessed on October 22, 2020. Q_{7-10} and Q_{30-10} values at Outfall 002 were found to be 271 cfs and 326 cfs respectively. The drainage area at Outfall 002 was found to be 1770 mi^2 from StreamStats.

Q_{7-10} runoff rate = 271 cfs/ 1770 mi^2 = 0.153 cfs/mi^2
Q_{30-10}/Q_{7-10} = 326 cfs/271 cfs = 1.2
Default Q_{1-10}: Q_{7-10} of 0.64 from 391-2000-007 will be used in modeling, if needed.

DEP's SOP (BPMPSM-PMT-033, revised Oct 1, 2020) section II.B.4 states that where a facility is eligible for technology based limits of $CBOD_5$ exceeding 25 mg/l, application managers will evaluate a WQBEL for $CBOD_5$ as follows:

a. *Model the discharge using Toxics Management Spreadsheet (TMS)*
b. *Multiply the acute partial mix factor by the Q_{7-10} of the receiving waters*

c. Run the WQM 7.0 model using the adjusted Q_{7-10} and apply the WQBEL in the permit, if less than the technology-based limits
d. Establish the average monthly concentration limit for TSS at the same concentration as for $CBOD_5$ using BPJ, if the $CBOD_5$ limit is a WQBEL

The attached TMS model suggested a PMFa of 6.5%. A partial mixing factor, according to DEP's technical guidance (391-2000-011), is used to describe the factional portion of the stream that mixes with the discharge at the criteria compliance times. The partial mix factor is a value between 0 and 1; 1 presenting complete mixing and less than 1 represents there is incomplete mixing between the discharge and the stream. Therefore, the revised Q_{7-10} will be **271 * 0.065 or 17.62 cfs**.

PWS Intake:
The nearest downstream public water supply is City of Philadelphia at Queen Lane intake, on Schuylkill River at RMI 12.59. Its approximately 9.67 miles downstream of Outfall 002.

Wastewater Characteristics:
A median pH of 7.0 from daily DMR during dry months July through September for the year 2020 and a default temperature of 20^0C (per 391-2000-013) will be used for modeling, if needed. The application data indicated an average Total Hardness of 210 mg/l out of 3 samples.

Background data:
There is currently no nearby StreamGage or WQN stations from Outfall 002. In absence of site-specific temperature data, a default temperature of 25°C and default pH of 7.0 (per 391-2000-013, WWF) will be used in modeling, if needed. The application data indicated stream hardness of 212.67 mg/l.

303d Listed Streams:
Schuylkill River is impaired for Fish Consumption and Aquatic Life due to PCB but supporting Potable Water Use. A TMDL has been finalized by EPA on 04/07/2007 for PCB.

Schuylkill River PCB TMDL:
During the previous permit cycle, the permittee collected one wet weather and one dry weather sample and analyzed for PCBs using Method 1668A. The results were: 10,673 pg/l (WW 04/08/2014); 1,404 pg/l (DW 05/2014)

The PCB results indicate that there are PCB concentrations that are above natural background and statewide surface water criteria levels. Based on the concentration of PCBs and volume of wastewater, this facility is considered a less significant source of PCBs.

The facility is required to develop and implement a PCB PMP (Pollution Minimization Plan). PCB sampling using Analytical Method 1668A is required to provide a baseline PCB level and to show progress towards achieving the instream PCB criteria of 64 pg/l. Guidelines developed by DRBC for the Delaware River TMDL recommends 1/year dry and wet weather sampling using method 1668A for POTWs influenced by wet weather. The facility is also required to submit annual PMP reports.

Antidegradation (93.4):
The effluent limits for this discharge have been developed to ensure that existing in-stream water uses and the level of water quality necessary to protect the existing uses are maintained and protected. The receiving streams are designated as Warm Water Fishes (WWF) and Migratory Fishes (MF.) No High Quality stream or Exceptional Value water is impacted by this discharge, therefore, no Antidegradation Analysis is performed for the discharge.

Discharge, Receiving Waters and Water Supply Information			
Outfall No.	003	Design Flow (MGD)	0
Latitude	40º 5' 41"	Longitude	-75º 19' 43"
Quad Name	Norristown	Quad Code	1843
Wastewater Description:	Stormwater		

Changes Since Last Permit Issuance: None
Other Comments:

Per Phase II stormwater regulations, major POTWs are required to have a permit for the discharge of stormwater. Therefore, stormwater monitoring requirements are included in Part A and Part C of the permit for this outfall.

Treatment Facility Summary

Changes Since Last Permit Issuance: None

Treatment Plant Description

Matsunk WPCC is a 5.5 MGD Major Sewer Facility (MASF2) located in Upper Merion Township, Montgomery County which discharges treated sewage through outfall 002 into a culvert to Schuylkill River in watershed 3-F. This is a trickling filter, alternative to secondary treatment facility and chlorine disinfection system. The treatment train consists of influent screening and grit removal, off-line flow equalization, primary clarifier, secondary biological treatment through oxidation towers and RBCs for advanced organic and ammonia treatment, secondary clarifier, and disinfection by sodium hypochlorite. The effluent is dechlorinated using sodium bisulfite.

The facility receives flows mostly from Upper Merion Township and small contributions from few other townships as listed in the next page.

Municipalities served	Flow contribution (%)	Type of Sewer System	
		Separate (%)	Combined (%)
Upper Merion Township	±95	100	0
Tredyffrin Township	4.0	100	0
Radnor Township	<0.5	100	0
West Conshohocken Township	<0.5	100	0

Per the renewal application, there is no significant or categorical industrial facility that discharges into the collection system.

Per PADEP's most recent inspection on September 29, 2020, the treatment train consists of the following treatment units:

- Three primary clarifiers

- Four trickling filters
- Twenty Rotating Biological Contactors
- Four secondary clarifiers
- Two chlorine contact tanks
- One grit removal
- One influent screen
- Two sludge thickeners

Sodium Hypochlorite is used at a maximum rate of 33.3 GPH and Sodium Bisulfite is used at maximum rate of 2.1 GPH.

Pre-treatment Program implementation:
Facilities greater than 5.0 MGD or less than 5.0 MGD with categorical and significant industrial users are required to develop or implement an EPA administered pre-treatment program. The facility is implementing an approved pretreatment program for which most recent local limits were approved by EPA in March 2017. The Part C of the permit will require continuation of the pre-treatment program implementation.

Biosolids Management:
Sludge is handled through gravity thickener units prior to being dewatered by a rotary press that was installed in April 2014. The dewatered cake is stabilized with lime prior to being hauled to one of two Waste Management owned landfills. The landfills are Tullytown, PA Resource Recovery Facility and GROWS North landfill in Morrisville, PA.

Summary of Inspections:

09/29/2020: RTPT conducted. No violation noted. Secondary clarifier #4 was repaired. Final effluent looked very good. No sign of matting or ponding on the trickling filters.

04/20/2020: RTPT conducted. No violation noted. The cause of overflow was due to residents flushing wipes. Final effluent looked great.

12/19/2019: CEI conducted. No violation identified. A new sludge press was installed. Overall, the treatment plant seemed to be operating well. Final effluent looked clear and receiving stream looked good as well.

05/14/2019: RTPT conducted. No violation identified.

01/17/2019: CEI conducted. No violation noted. Effluent looked clear and the receiving stream looked good as well. Overall, the treatment plant seemed operating well.

08/01/2018: CEI conducted. No violation noted. Effluent looked clear and the receiving stream looked good as well. Overall, the treatment plant seemed operating well.

05/18/2017: CEI conducted. No violation noted. Effluent looked clear and the receiving stream looked good as well. Overall, the treatment plant seemed operating well.

09/29/2016: CEI conducted. No violation noted. Effluent looked clear and the receiving stream looked good as well. Overall, the treatment plant seemed operating well.

	45	Average Weekly	133.102(b)(2)	92a.47(a)(2)
pH	6.0 – 9.0 S.U.	Min – Max	133.102(c)	95.2(1)
Fecal Coliform (5/1 – 9/30)	200 / 100 ml	Geo Mean	-	92a.47(a)(4)
Fecal Coliform (5/1 – 9/30)	1,000 / 100 ml	IMAX	-	92a.47(a)(4)
Fecal Coliform (10/1 – 4/30)	2,000 / 100 ml	Geo Mean	-	92a.47(a)(5)
Fecal Coliform (10/1 – 4/30)	10,000 / 100 ml	IMAX	-	92a.47(a)(5)
Fecal Coliform	200 / 100 ml	Geo Mean	DRBC	92a.47(a)(5)
Fecal Coliform	1,000 / 100 ml	IMAX	DRBC	92a.47(a)(5)
Total Residual Chlorine	0.5	Average Monthly	-	92a.48(b)(2)

Comments: These standards apply, subject to Water Quality Analysis and BPJ where applicable.

Water Quality-Based Limitations

Water Quality-Based Limitations

WQM 7.0:

WQM 7.0 version 1.0b is a water quality model designed to assist DEP to determine appropriate effluent limits for $CBOD_5$, NH_3-N and DO. The model simulates two basic processes. In the NH_3-N module, the model simulates the mixing and degradation of NH_3-N in the stream and compares calculated instream NH_3-N concentrations to NH_3-N water quality criteria. In the D.O. module, the model simulates the mixing and consumption of D.O. in the stream due to the degradation of $CBOD_5$ and NH_3N and compares calculated instream D.O. concentrations to D.O. water quality criteria. Since WQM 7.0 assumes immediate and complete mix between the discharge and stream flow, Q_{7-10} was adjusted, as shown on page 3, to examine allowable wasteload allocations under appropriate mixing conditions. The model was utilized for this permit renewal by using adjusted Q_{7-10} and historic background water quality levels of the river. In addition, due to proximity, several other upstream and downstream dischargers are included in the multiple discharge scenario. The following data were used in the attached computer model of the stream:

- Discharge pH 7.0 (median Jul-Sep, 2020, DMR data)
- Discharge Temperature 20°C (Default per 391-2000-013)
- Discharge Hardness 210 mg/l (Application data)
- Stream pH 7.0 (Default per 391-2000-013)
- Stream Temperature 25°C (Default per 391-2000-013, WWF)
- Stream Hardness 212.67 mg/l (Application data)

The following nodes were considered in modeling:

Node 1: Norristown STP (PA0027421) Outfall 001 at Schuylkill River (00833)
Elevation: 49 ft (USGS National Map viewer, 11/13/2019)

	Drainage Area:	1766 mi^2 (StreamStat Version 3.0, 11/13/2019)
	River Mile Index:	23.4 (PA DEP eMapPA)
	Low Flow Yield:	0.125 cfs/mi^2
	Discharge Flow:	9.75 MGD
Node 2:	ENPWJSA STP (PA0026816) Outfall 001 at Schuylkill River (00833)	
	Elevation:	48 ft (USGS National Map viewer, 11/13/2019)
	Drainage Area:	1766.1 mi^2 (StreamStat Version 3.0, 11/13/2019)
	River Mile Index:	22.94 (PA DEP eMapPA)
	Low Flow Yield:	0.125 cfs/mi^2
	Discharge Flow:	8.1 MGD
Node 3:	Bridgeport WWTP Outfall 001 at Schuylkill River (00833)	
	Elevation:	43.79 ft (USGS National Map viewer, 11/13/2019)
	Drainage Area:	1769.9 mi^2 (StreamStat Version 3.0, 11/13/2019)
	River Mile Index:	22.79 (PA DEP eMapPA)
	Low Flow Yield:	0.125 cfs/mi^2
	Discharge Flow:	0.9 MGD
Node 4:	Matsunk STP Outfall 002 at Schuylkill River (00833)	
	Elevation:	42.85 ft (USGS National Map viewer, 06/25/2021)
	Drainage Area:	1770.0 mi^2 (StreamStat Version 3.0, 06/25/2021)
	River Mile Index:	22.26 (PA DEP eMapPA)
	Low Flow Yield:	0.153 cfs/mi^2
	Discharge Flow:	5.5 MGD
Node 5:	At the Plymouth Dam on Schuylkill River (00833)	
	Elevation:	39.59 ft (USGS National Map viewer, 11/13/2019)
	Drainage Area:	1770.1 mi^2 (StreamStat Version 3.0, 11/13/2019)
	River Mile Index:	21.22 (PA DEP eMapPA)
	Low Flow Yield:	0.153 cfs/mi^2
	Discharge Flow:	0.0 MGD
Node 6:	At RMI 21.025	
	Elevation:	38.74 ft (USGS National Map viewer, 06/29/2021)
	Drainage Area:	1780 mi^2 (StreamStat Version 3.0, 06/28/2021)
	River Mile Index:	21.025 (PA DEP eMapPA)
	Low Flow Yield:	0.15 cfs/mi^2
	Discharge Flow:	0.0 MGD

Ammonia (NH_3-N), Carbonaceous Biochemical Oxygen Demand (CBOD5), & Dissolved Oxygen (DO):
WQM 7.0 version 1.0b is a water quality model designed to assist DEP to determine appropriate effluent limits for $CBOD_5$, NH_3-N and DO. The model simulates two basic processes. In the NH_3-N module, the model simulates the mixing and degradation of NH_3-N in the stream and compares calculated instream NH_3-N concentrations to NH_3-N water quality criteria. In the D.O. module, the model simulates the mixing and consumption of D.O. in the stream due to the degradation of $CBOD_5$ and NH_3N and compares calculated instream D.O. concentrations to D.O. water quality criteria. The model was utilized for this permit renewal by using $Q_{7\text{-}10}$ and current background water quality levels of the stream.

NH_3-N:
WQM 7.0 suggested NH_3-N limit of 6.0 mg/l as monthly average and 12.0 mg/l as IMAX limit during summer to protect water quality standards. These values are the same as existing permitted limits. Recent DMR data show that the plant is meeting the permit limits. The average monthly mass loading is calculated to be 344 lbs./day. The existing winter season limits of 18.0 mg/l as average monthly and 36.0 mg/l as IMAX limit will be carried over in this renewal. Winter average monthly mass limit was calculated as 1033 lbs./day.

CBOD$_5$:
The WQM 7.0 model suggests a monthly average CBOD$_5$ limit of 18 mg/l. The average monthly and average weekly mass loadings were calculated as 1033 lbs/day and 1549 lbs/day respectively. The current permit has seasonal limit for CBOD$_5$ which will be carried over in this renewal. Seasonal limit for CBOD$_5$ is allowed in PADEP's guidance (391-2000-003). The mass limit for winter season is calculated to be 1434 lbs./day as monthly average and 2180 lbs./day as weekly average. Minimum monitoring frequency will remain the same as 1/day, 24-hr composite sampling.

Dissolved Oxygen (DO):
The existing permit has a minimum DO of 4.0 mg/l. Per Pa Code 25 Ch.93.7, a minimum DO of 5.0 is required for WWF. This is also supported by WQM 7.0 output.

Toxics:
Based on the available data, PADEP utilizes Toxics Management Spreadsheet (TMS) to (1) evaluate reasonable potential for toxic pollutants to cause or contribute to an excursion above the water quality standards and (2) develop WQBELs for those such toxic pollutants (i.e., 40 CFR § 122.44(d)(1)(i)). It is noteworthy that some of these pollutants that may be reported as "non-detect", but still exceeded the criteria, were determined to be candidates for modeling because the method detection levels used to analyze those pollutants were higher than target QLs and/or the most stringent Chapter 93 criteria. The model then recommended the appropriate action for the Pollutants of Concerns based on the following logic:

1. In general, establish limits in the draft permit where the effluent concentration determined in B.1 or B.2 equals or exceeds 50% of the WQBEL (i.e., RP is demonstrated). Use the average monthly, maximum daily and instantaneous maximum (IMAX) limits for the permit as recommended by the TMS (or, if appropriate, use a multiplier of 2 times the average monthly limit for the maximum daily limit and 2.5 times the average monthly limit for IMAX).

2. For non-conservative pollutants, in general, establish monitoring requirements where the effluent concentration determined in B.1 or B.2 is between 25% - 50% of the WQBEL.

3. For conservative pollutants, in general, establish monitoring requirements where the effluent concentration determined in B.1 or B.2 is between 10% - 50% of the WQBEL.

NOTE 4 – If the effluent concentration determined in B.1 or B.2 is "non-detect" at or below the target quantitation limit (TQL) for the pollutant as specified in the TMS and permit application, the pollutant may be eliminated as a candidate for WQBELs or monitoring requirements unless 1) a more sensitive analytical method is available for the pollutant under 40 CFR Part 136 where the quantitation limit for the method is less than the applicable water quality criterion and 2) a detection at the more sensitive method may lead to a determination that an effluent limitation is necessary, considering available dilution at design conditions.

NOTE 5 – If the effluent concentration determined in B.1 or B.2 is a detection below the TQL but above or equal to the applicable water quality criterion, WQBELs or monitoring may be established for the pollutant.

4. Application managers may, on a site- and pollutant-specific basis, deviate from these guidelines where there is specific rationale that is documented in the fact sheet.

☑ ***Recommended WQBELs & Monitoring Requirements***

No. Samples/Month: 4

	Mass Limits		*Concentration Limits*

Dibenzo(a,h)Anthrancene	0.014	0.022	0.3	0.47	0.76	µg/L	0.3	CRL	Discharge Conc ≥ 50% WQBEL (RP)
Indeno(1,2,3-cd)Pyrene	0.003	0.004	0.059	0.091	0.15	µg/L	0.059	THH	Discharge Conc ≥ 50% WQBEL (RP)
Phenanthrene	0.45	0.71	9.88	15.4	24.7	µg/L	9.88	AFC	Discharge Conc ≥ 50% WQBEL (RP)

Each of the parameters are discussed below:

TDS and its constituents:
TMS suggests monitoring for TDS and its constituents if there is PWS concern. The nearest downstream PWS is approximately 10 miles for which this discharge apparently poses no threat. The facility has an approved DRBC docket (D-1987-013 CP-3) issued on September 13, 2018. The Docket requires TDS limit of 1,000 mg/l quarterly. Therefore, a TDS limit of 1,000 mg/l with quarterly monitoring will be placed in the permit.

Total Copper: The application provided three sample results for Total Copper. On PADEP's request, US EPA provided additional 28 sample results from pretreatment effluent data for the reporting period between 2013-2019. All data were plugged into PADEP's TOXCONC to determine AMEC and daily CoV values. TOXCONC calculated an AMEC of 52.0268 ug/l and CoV of 0.2714. These values were utilized in TMS. As shown in the below table, TMS suggests AML of 29.5 ug/l, MDL of 39.1 ug/l, IMAX of 73.8 ug/l, calculated mass AML of 1.69 lbs./day, and mass MDL of 2.24 lbs./day. Since this is a new parameter, PADEP provided the permittee with a Pre-Draft survey. The permittee returned the pre-draft survey which indicated that the permittee is not aware of the source of the pollutant, suspected the source to be from domestic plumbing systems, haven't conducted any studies regarding the control or treatment of the pollutant, doesn't believe it can achieve the proposed WQBEL now, indicated their plant do not treat the pollutant, and uncertain about the estimated date by which it can achieve the proposed WQBEL. Therefore, PADEP followed the instructions illustrated in the SOP titled "Establishing Water Quality-Based Effluent Limitations (WQBELs) and Permit Conditions for Toxic Pollutants in NPDES Permits for Existing Discharges" (SOP No. BCW-PMT-037, revised May 20, 2021). Per the SOP, PADEP has made the following determination:

1. a compliance schedule will be placed in the permit with monitoring requirements for first three years of the permit term and proposed WQBELs for remaining two years, since the permittee indicated that they are uncertain when compliance could be achieved with final WQBEL.

2. Some of the values used in the TMS spreadsheet are default values in absence of site-specific data. Those values are identified in this fact sheet pages 2, 3, and 11. The permittee is required to conduct site specific data collection to refine the accuracy of the WQBEL for the default or model-driven input values. A special Part C condition will be added in the Part C of the draft permit.

3. Since the source of toxic pollutant is unknown or are suspected, the permittee will be required to conduct a Toxics Reduction Evaluation (TRE) to investigate and control the source(s) of the pollutant subject to final WQBEL. The permittee suspected the domestic plumbing system be the source of Copper. Therefore, the TRE study must include a Corrosion Control Feasibility Study.

1,4-Dioxane: TMS initially suggests monitoring for 1,4-Dioxane. No monitoring was suggested when the updated model was utilized.

Semi-volatiles:
TMS suggested monitoring for all eight semi-volatiles as listed above. However, the QL (5 ug/l) used by the lab is higher than PADEP's TQL (2.5 ug/l) and all three results for each semi-volatiles came as non-detect. Therefore, it is still unclear if they are actually a pollutant of concern or not. Per the response on pre-draft survey, the permittee agreed to provide four additional test results for each of the semi-volatiles using PADEP's TQL. The sampling will be 24-hr composite, 1 week apart. PADEP received retest results on January 4, 2021 and TMS was again utilized. TMS determined that no limits or monitoring is needed for any of the semi-volatiles.

The updated TMS output table is provided below:

☑ ***Recommended WQBELs & Monitoring Requirements***

No. Samples/Month: 4

	Mass Limits		*Concentration Limits*						
Pollutants	AML (lbs/day)	MDL (lbs/day)	AML	MDL	IMAX	Units	Governing WQBEL	WQBEL Basis	Comments
Total Copper	1.35	1.79	29.5	39.1	73.8	µg/L	29.5	AFC	Discharge Conc ≥ 50% WQBEL (RP)
Total Zinc	Report	Report	Report	Report	Report	µg/L	311	AFC	Discharge Conc > 10% WQBEL (no RP)

Whole Effluent Toxicity Testing (WETT):
The permittee provided four WETT sample results with the application dated March 2017, April 2016, May 2015, and October 2014. The tests in 2014, 2015, and 2016 were conducted by QC laboratories or Eurofins QC, Inc. The Department has determined that WET tests analyzed by QC Laboratories or Eurofins QC prior to February 2017 are unreliable and are considered invalid due to technical issues. As a result, the application didn't include four valid WET tests required to perform a reasonable potential analysis. However, the permittee provided annual WETT results for the year 2018 and 2019 that added to three valid tests. 2020 WET test results were received on January 4, 2021. PADEP utilized the WETT Analysis Spreadsheet to determine RP and update the dilution series. The updated TIWCc was calculated to be 6% to evaluate the test results for a stream flow of 271 cfs, discharge flow of 5.5 MGD, and PMFc of 0.453. The WET tests are discussed in detail on pages 15-16 of this report.

Additional Considerations

Fecal Coliform:
The recent coliform guidance in 25 Pa. code § 92a.47.(a)(4) requires a summer technology limit of 200/100 ml as a geometric mean and an instantaneous maximum not greater than 1,000/100ml and § 92a.47.(a)(5) requires a winter limit of 2,000/100ml as a geometric mean and an instantaneous maximum not greater than 10,000/100ml. Delaware River Basin Commission's (DRBC's) Water Quality Regulations at Section 4.30.4.A requires that during winter season from October through April, the instantaneous maximum concentration of fecal coliform organisms shall not be greater than 1,000 per 100 milliliters in more than 10 percent of the samples tested. Therefore, the summer limit is governed by DEP's regulation while winter limit is governed by DRBC's regulation.

E. Coli:
DEP's SOP titled "Establishing Effluent Limitations for Individual Sewage Permits (BCW-PMT-033, revised March 24, 2021) recommends monthly E. Coli monitoring for all major sewage dischargers. This requirement will be applied from this permit term.

pH:
The TBEL for pH is above 6.0 and below 9.0 S.U. (40 CFR §133.102(c) and Pa Code 25 § 95.2(1)) which are existing limits and will be carried over.

Total Suspended Solids (TSS):
There is no water quality criterion for TSS. The existing limits of 30 mg/L average monthly, 45 mg/l average weekly, and 60 mg/L instantaneous maximum will remain in the permit based on the minimum level of effluent quality attainable by secondary treatment, 25 Pa. Code § 92a.47 and 40CFR 133.102(b). The mass based average monthly and weekly average limits are calculated to be 1376.1 lbs./day and 2064.15 lbs./day respectively, which are rounded down to 1375 lbs./day and 2060 lbs./day, respectively (362-0400-001).

Total Residual Chlorine (TRC):

The attached computer printout utilizes the equation and calculations as presented in the Department's 2003 Implementation Guidance for Total Residual Chlorine (TRC) (ID#391-2000-015) for developing chlorine limitations. The attached printout indicates that a water quality limit of 0.5 mg/l would be needed to prevent toxicity concerns at the discharge point for Outfall 002. The Instantaneous Maximum (IMAX) limit is 1.6 mg/l. The existing permit has AML limit of 0.5 mg/l and IMAX limit of 1.2 mg/l. The IMAX is a little more stringent and will be carried over due to anti-backsliding policy. DMR data from October 2019 to September 2020 indicates that the plant is discharging below the existing limits. The minimum monitoring frequency is 1/day.

Flow and Influent BOD_5, $CBOD_5$, and TSS Monitoring Requirement:
The requirement to monitor the volume of effluent will remain in the draft permit per 40 CFR § 122.44(i)(1)(ii). Influent BOD_5 and TSS monitoring requirements are established in the permit per the requirements set in Pa Code 25 Chapter 94. To show compliance with percentage removal efficiency of $CBOD_5$, reporting for influent $CBOD_5$ will remain in the permit.

Best Professional Judgement (BPJ):
Total Phosphorus:
Existing monthly monitoring requirement will be carried over in this renewal.

Monitoring Frequency and Sample Types:
Otherwise specified above, the monitoring frequency and sample type of compliance monitoring for existing parameters are recommended by DEP's SOP and Permit Writers Manual and/or on a case-by-case basis using best professional judgment (BPJ).

Total Nitrogen:
PADEP's SOP BCW-PMT-033 suggests monitoring requirement, at a minimum, for facilities with design flow greater than 2,000 GPD. This requirement is applied for all facilities meeting the flow criteria.

Mass-based limits calculation:
The mass-based limits for NH3-N, CBOD5, TSS, and Total Copper were calculated based on maximum monthly flow (hydraulic design flow) instead of average annual design flow. The reason behind this exception is that the permittee indicated a comprehensive discussion in November 2000 with PADEP which included permittee's proactive program of addressing I&I issues by expending the WWTF to process higher flows and agreements with other municipalities in light of hydraulic flow. PADEP conducted a document search in 2013 regarding this issue and confirmed that hydraulic design flow was agreed upon to use in mass calculation. In 2013, USEPA recommended to add the following footnote in the Part A of the permit "The effluent limits for Outfall 002 were determined using an annual average discharge rate of 5.5 million gallons per day and maximum monthly discharge rate of 6.88 million gallons per day."

Anti-Backsliding
The proposed limits are at least as stringent as are in existing permit, unless otherwise stated; therefore, anti-backsliding is not applicable.

Development of Effluent Limitations

Outfall No.	003	**Design Flow (MGD)**	0
Latitude	40º 5' 39.00"	**Longitude**	-75º 19' 43.00"
Wastewater Description:	Stormwater		

Outfall 003 is a stormwater only outfall. Per Phase II stormwater regulations, major POTWs are required to have a permit for the discharge of stormwater. Therefore, stormwater monitoring requirements are included in Part A and Part C of the permit for this outfall. The existing monitoring requirements will be carried over in this renewal.

Whole Effluent Toxicity (WET)

For Outfall 002, ☐ **Acute** ☒ **Chronic** WET Testing was completed:

☒ For the permit renewal application (4 tests).
☐ Quarterly throughout the permit term.
☐ Quarterly throughout the permit term and a TIE/TRE was conducted.

☐ Other:

The dilution series used for the tests was: 100%, 60%, 30%, 2%, and 1%. The Target Instream Waste Concentration (TIWC) to be used for analysis of the results is: 2%.

Summary of Four Most Recent Test Results

(NOTE – Enter results into one table, depending on which data analysis method was used).

TST Data Analysis

(NOTE – In lieu of recording information below, the application manager may attach the DEP WET Analysis Spreadsheet).

Test Date	*Ceriodaphnia* Results (Pass/Fail)		*Pimephales* Results (Pass/Fail)	
	Survival	Reproduction	Survival	Growth
4/4/2017	Pass	Pass	Pass	Pass
11/6/2018	Pass	Pass	Pass	Pass
11/5/2019	Pass	Pass	Pass	Pass
12/08/2020	Pass	Pass	Pass	Pass

***** *A "passing" result is that in which the replicate data for the TIWC is not statistically significant from the control condition. This is exhibited when the calculated t value ("T-Test Result") is greater than the critical t value. A "failing" result is exhibited when the calculated t value ("T-Test Result") is less than the critical t value.*

Is there reasonable potential for an excursion above water quality standards based on the results of these tests? (*NOTE – In general, reasonable potential is determined anytime there is at least one test failure in the previous four tests).*

☐ **YES** ☒ **NO**

Comments: None

Evaluation of Test Type, IWC and Dilution Series for Renewed Permit

Acute Partial Mix Factor (PMFa): **0.065** Chronic Partial Mix Factor (PMFc): **0.453**

1. Determine IWC – Acute (IWCa):

$(Q_d \times 1.547) / ((Q_{7\text{-}10} \times PMFa) + (Q_d \times 1.547))$

[(5.5 MGD x 1.547) / ((271 cfs x 0.065) + (5.5 MGD x 1.547))] x 100 = **32.57%**

Is IWCa < 1%? ☐ **YES** ☒ **NO** **(YES - Acute Tests Required OR NO - Chronic Tests Required)**

If the discharge is to the tidal portion of the Delaware River, indicate how the type of test was determined:

Type of Test for Permit Renewal: **Chronic**

2a. Determine Target IWCa (If Acute Tests Required)

TIWCa = IWCa / 0.3 = **%**

2b. Determine Target IWCc (If Chronic Tests Required)

$(Q_d \times 1.547) / (Q_{7\text{-}10} \times PMFc) + (Q_d \times 1.547)$

[(5.5 MGD x 1.547) / ((271 cfs x 0.453) + (5.5 MGD x 1.547))] x 100 = **6.48%**

3. Determine Dilution Series

(NOTE – check Attachment C of WET SOP for dilution series based on TIWCa or TIWCc, whichever applies).

Dilution Series = 100%, 60%, 30%, 6%, and 3%.

WET Limits

Has reasonable potential been determined? ☐ YES ☒ NO

Will WET limits be established in the permit? ☐ YES ☒ NO

If WET limits will be established, identify the species and the limit values for the permit (TU).

N/A

If WET limits will not be established, but reasonable potential was determined, indicate the rationale for not establishing WET limits:

N/A

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

Outfall 002, Effective Period: Permit Effective Date through Permit Expiration Date.

☑ ***Recommended WQBELs & Monitoring Requirements***

No. Samples/Month: 4

	Mass Limits		*Concentration Limits*						
Pollutants	AML (lbs/day)	MDL (lbs/day)	AML	MDL	IMAX	Units	Governing WQBEL	WQBEL Basis	Comments
Total Copper	1.35	1.79	29.5	39.1	73.8	µg/L	29.5	AFC	Discharge Conc ≥ 50% WQBEL (RP)
Total Zinc	Report	Report	Report	Report	Report	µg/L	311	AFC	Discharge Conc > 10% WQBEL (no RP)

☑ ***Other Pollutants without Limits or Monitoring***

The following pollutants do not require effluent limits or monitoring based on water quality because reasonable potential to exceed water quality criteria was not determined and the discharge concentration was less than thresholds for monitoring, or the pollutant was not detected and a sufficiently sensitive analytical method was used (e.g., <= Target QL).

Pollutants	Governing	Units	Comments
