Purpose of Application	n Permit Renewal.											

Summary of Review

Applicant requests renewal of an NPDES permit to discharge treated sewage effluent from Phoenixville Borough STP.

This is a major permit with average annual flow of 4.0 mgd. The facility is serving Phoenixville Borough and Schuylkill Twp.

The sewage treatment plant consists of: influent splitter box, bar screen, grit chamber, three primary clarifiers, two trickling filters (dormant), three aeration tanks, four final clarifiers, UV disinfection, anaerobic sludge digesters, sludge storage and sludge dewatering via belt filter and/or centrifuge. The facility is producing Class B Biosolids which is used in land application.

The Borough is planning to upgrade the treatment plant with Hydrothermal Carbonization technology to convert organic waste into BioCoal and BioSolution.

There are no industrial users discharging into the plant.

According to the application Soda Ash (for pH alkalinity) and Polymer (for sludge dewatering) are used as the wastewater treatment chemicals.

Based on the review of the edmr data the discharge is in compliance with the permit limitations.

The effluent limits derived for this permit are based on the Schuylkill River Reallocation Study as outlined in the letter from the PADEP to Ms. Evelyn McKnight of the EPA Region III dated May 1, 2002, published in the PA Bulletin on January 18, 2003, and approved by the EPA on February 7, 2003 (Oaks WWTP, PA0026964). As part of the study, the four (4) sewage treatment plants located between the Black Rock Dam and the Norristown Dam on the Schuylkill River were modeled concurrently by the DEP stream model WQM 6.3. WQM models the stream for both compliance with the dissolved oxygen

Summary of Review

criteria and for ammonia toxicity. The facilities included in the model were Phoenixville (PA0027154), MCSA (PA0026964), Valley Forge Sewer Authority (PA0043974), and Upper Merion Trout Run (PA0026131).

The recommended effluent limitations for the draft permit are similar to the effluent limitations in the existing permit. A new monitoring requirement for the E-coli is included according to the latest revised DEP SOP for Establishing Effluent Limitations for Individual Sewage Permits.

Influent monitoring requirements for CBOD5, TSS and BOD5 are included in the draft permit to check compliance with the 85% removal requirement and Chapter 94 requirement. This requirement is consistent with other similar dischargers in the area.

On April 7, 2007, the U.S. Environmental Protection Agency (EPA), Region III, established a Total Maximum Daily Load (TMDL) for Polychlorinated Biphenyl (PCB) for the Schuylkill River, which was listed on Pennsylvania's 1996 303(d) list of impaired streams as impaired due to the presence of elevated PCB concentrations found in fish tissue. The water quality criterion used in the TMDL is 44 pg/l. According to the requirement of the existing permit, the Borough submitted a PCB PMP on February 28, 2018 and a revised PMP on August 25, 2020. Annual PCB monitoring and a Part C condition requiring the submission of PMP annual report and PCB data are incorporated into the permit similar to the existing permit.

Stormwater monitoring requirements are included for Outfall 002 similar to the existing permit requirements.

The condition requiring continuing implementation of the High Flow Maintenance Plan is included in the draft permit similar to the current permit.

DRBC Docket No. D-1967-080 CP-4 was approved for this facility on June 14, 2017.

Sludge use and disposal description and location(s): The Borough has a contract with Synagro for the land application of sludge at various locations.

Public Participation

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Act 14 Notification:

Chester County - August 31, 2021

Permit Conditions:

- A. No Stormwater
- B. Acquire Necessary Property Rights
- C. Proper Sludge Disposal
- D. Chlorine Optimization
- E. Operator Notification
- F. Operations and Maintenance Plan
- G. High Flow Management Plan
- H. Fecal Coliform Reporting
- I. Solids Management
- J. WET Condition
- K. Stormwater Outfalls Requirement
- L. PCB PMP Requirement

Technology-Based Limitations

The following technology-based limitations apply, subject to water quality analysis and BPJ where applicable:

Pollutant	Limit (mg/l)	SBC	Federal Regulation	State Regulation
CBOD ₅	25	Average Monthly	133.102(a)(4)(i)	92a.47(a)(1)
CBOD5	40	Average Weekly	133.102(a)(4)(ii)	92a.47(a)(2)
Total Suspended	30	Average Monthly	133.102(b)(1)	92a.47(a)(1)
Solids	45	Average Weekly	133.102(b)(2)	92a.47(a)(2)
pН	6.0 – 9.0 S.U.	Min – Max	133.102(c)	95.2(1)
Fecal Coliform				
(5/1 – 9/30)	200 / 100 ml	Geo Mean	-	92a.47(a)(4)
Fecal Coliform				
(5/1 – 9/30)	1,000 / 100 ml	IMAX	-	92a.47(a)(4)
Fecal Coliform				
(10/1 – 4/30)	2,000 / 100 ml	Geo Mean	-	92a.47(a)(5)
Fecal Coliform				
(10/1 – 4/30)	10,000 / 100 ml	IMAX	-	92a.47(a)(5)
Total Residual				·
Chlorine*	0.5	Average Monthly	-	92a.48(b)(2)

^{*}Facility uses UV disinfection system. Chlorine is not used as a backup. TRC limit is not needed in the permit.

Water Quality-Based Limitations

The following limitations are recommended for the draft permit:

Parameters	Monthly Ave.	Weekly Ave	Inst. Max.	Basis
	Conc (mg/l)	Conc. (mg/l)	(mg/l)	
CBOD ₅ (5/1 to10/31)	20	30	40	Existing *
CBOD ₅ (11/1 to 4/30)	25	40	50	Existing *
Dissolved Oxygen	5.0		Inst. Min.	Existing*
Total Suspended Solids	30	45	60	Existing, DRBC
TDS	Report			Existing, DRBC docket
NH ₃ -N (05/01 to 10/31)	8		16	Existing*
NH ₃ -N (11/1 to 4/30)	12		24	Existing*
Nitrate-Nitrite as N	Report			Existing
TKN	Report			Existing
Total N	Report			Existing
Total P	Report			Existing
UV Transmittance (%)			Report (Daily Min.)	Existing
Fecal Coliform	200 (Geo. Mean)		1000	Ch.92a/DRBC

E. Coli			Report	Chap. 92a**
рН	6.0 to 9.0 std. un	its at all times		Ch. 93

^{*} The effluent limits derived for this permit are based on the Schuylkill River Reallocation Study as outlined in the letter from the PADEP to Ms. Evelyn McKnight of the EPA Region III dated May 1, 2002, published in the PA Bulletin on January 18, 2003, and approved by the EPA on February 7, 2003 (Oaks WWTP, PA0026964). As part of the study, the four (4) sewage treatment plants located between the Black Rock Dam and the Norristown Dam on the Schuylkill River were modeled concurrently by the DEP stream model WQM 6.3. WQM models the stream for both compliance with the dissolved oxygen criteria and for ammonia toxicity. The facilities included in the model were Phoenixville (PA0027154), MCSA (PA0026964), Valley Forge Sewer Authority (PA0043974), and Upper Merion Trout Run (PA0026131). The final of several model runs was used as the basis for reallocating the effluent limits for the four facilities. Since there has been no change to the design flow of the Phoenixville Borough STP since the reallocation study was completed, no further WQM modeling is required and there are no proposed changes to the water-quality based limits. The winter seasonal multipliers for CBOD₅ and NH₃N are carried over from the existing permit.

A "Reasonable Potential Analysis" determined the following parameters were candidates for limitations/monitoring:

Parameter	Monthly Ave. Conc. (mg/l)	Maximum Daily Conc. (mg/l)	Inst. Max. (mg/l)	Recommendation/Basis
Total Aluminum	1,786	2,787	4,466	TMS v.1.3 *
Total Cadmium	Report	Report	Report	TMS v.1.3
Total Copper	Report	Report	Report	TMS v.1.3

^{*} Three results are available and only one result is above the most stringent criterion. Therefore, monitoring is recommended to get more data to reevaluate at the next permit renewal.

See the below attached Toxics Management Spreadsheet (TMS) Report: Valley Forge Sewer Authority (PA0043974) discharge point is used as the End of Reach 1 for the model.

^{**} E. Coli monitoring is a new requirement for the Sewage dischargers based on the latest revised SOP for Establishing Effluent limitations for Individual Sewage Permits.

Total Copper	Report	Report	Report	Report	Report	μg/L	47.0	AFC	Discharge Conc > 10% WQBEL (no RP)

☑ Other Pollutants without Limits or Monitoring

The following pollutants do not require effluent limits or monitoring based on water quality because reasonable potential to exceed water quality criteria was not determined and the discharge concentration was less than thresholds for monitoring, or the pollutant was not detected and a sufficiently sensitive analytical method was used (e.g., <= Target QL).

Pollutants	Governing WQBEL	Units	Comments
Total Dissolved Solids (PWS)	N/A	N/A	PWS Not Applicable

Development of Effluent Limitations								
Outfall No.	002		Design Flow (MGD)	0				
Latitude	40° 7' 47.00"		Longitude	-75° 30' 10.00"				
Wastewater	Description:	Stormwater						

The following existing stormwater parameters are recommended to continue pH, CBOD5, COD, TSS, Fecal Coliform, TKN, TP, and Dissolved Iron. Benchmark values for TSS (100 mg/l) and COD (120 mg/l) are also included in Part C of the draft permit. These are consistent with the Benchmark values established in the PAG03 General Permit for discharges of stormwater associated with industrial activity.

Whole Effluent Toxicity (WET)
For Outfall 001, Acute Chronic WET Testing was completed:
For the permit renewal application (4 tests). Quarterly throughout the permit term. Quarterly throughout the permit term and a TIE/TRE was conducted. Other: annually
The dilution series used for the tests was: 100%, 60%, 30%, 2%, and 1%. The Target Instream Waste Concentration (TIWC) to be used for analysis of the results is: 2%.

NPDES Permit No. PA0027154

NPDES Permit Fact Sheet Phoenixville Borough STP

Based on the four submitted reports, WET test Type, TIWC and Dilution series are evaluated. There is no reasonable potential, and no WET limits are needed. Using the PMFa and PMFc from the TMS, the recommended dilution series for the draft permit is 100%, 60%, 30%, 5% and 2% and the TIWC is 5%. WET testing condition is also included in Part C of the permit according to DEP WET SOP.

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.
