# NPDES PERMIT FACT SHEET INDIVIDUAL SEWAGE

Application No.	PA0027243
APS ID	802582
Authorization ID	1264374

## **Applicant and Facility Information**

Applicant Name	North Huntingdon Township Municipal Authority	Facility Name	Youghiogheny STP
Applicant Address	11265 Center Highway	Facility Address	4222 Turner Valley Road
	North Huntingdon, PA 15642-2018		North Huntingdon, PA 15642-2846
Applicant Contact	Mr. Michael L. Branthoover	Facility Contact	Mr. Chris Sanner
Applicant Phone	(724) 863-2860	Facility Phone	Same as Applicant
Client ID	41738	Site ID	243623
Ch 94 Load Status	Not Overloaded	Municipality	North Huntingdon Township
Connection Status	No Limitations	County	Westmoreland
Date Application Rece	ived March 6, 2019	EPA Waived?	No
Date Application Acce	pted March 9, 2019	If No, Reason	Major Facility

## Summary of Review

The applicant has applied for a renewal of an existing NPDES Permit, Permit No. PA0027243, which was previously issued by the Department on August 15, 2014. That permit expired on August 31, 2019.

WQM Permit 6573448 A-5, issued on October 6, 2003, approved STP expansion with a hydraulic design capacity of 3.313 MGD and organic capacity of 5,524 lbs/day. The existing treatment process consists of primary clarifiers, trickling filter, rotating biological contactors (RBCs), final clarifiers and chlorination.

The receiving stream, Youghiogheny River, is classified as a WWF and is located in State Watershed No. 19-D.

The applicant has complied with Act 14 Notifications and no comments were received.

The application states there are no stormwater related outfalls located at the STP. Part C will not contain language titled "Requirements Applicable to Stormwater Outfalls".

Sludge use and disposal description and location(s): Sludge is anaerobically treated/stabilized, dewatered and disposed of at the Westmoreland Sanitary Landfill, Westmoreland County, PA.

**Public Participation** 

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*,

Approve	Deny	Signatures	Date
x		hill Chlitebell	
		William C. Mitchell, E.I.T. / Environmental Engineering Specialist	February 19, 2021
х		Chke	
		Christopher Kriley, P.E. / Clean Water Program Manager	February 22, 2021

## Summary of Review

DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

## **Compliance Status:**

Completed by: John Murphy

Completed date: 2/4/2021

Other Comments: Permit issuance is recommended. There are some effluent exceedances, but only one in the last two years. Ops will monitor.

## **Development of Effluent Limitations**

Outfall No.	001		Design Flow (MGD)	3.313
Latitude	40º 17' 47.00"		Longitude	-79° 47' 4.00"
Wastewater De	escription:	Sewage Effluent	-	

## **Technology-Based Limitations**

The following technology-based limitations apply, subject to water quality analysis and BPJ where applicable:

Pollutant	Limit (mg/l)	SBC	Federal Regulation	State Regulation
CBOD₅	25	Average Monthly	133.102(a)(4)(i)	92a.47(a)(1)
CBOD5	40	Average Weekly	133.102(a)(4)(ii)	92a.47(a)(2)
Total Suspended	30	Average Monthly	133.102(b)(1)	92a.47(a)(1)
Solids	45	Average Weekly	133.102(b)(2)	92a.47(a)(2)
рН	6.0 – 9.0 S.U.	Min – Max	133.102(c)	95.2(1)
Fecal Coliform				
(5/1 – 9/30)	200 / 100 ml	Geo Mean	-	92a.47(a)(4)
Fecal Coliform				
(5/1 – 9/30)	1,000 / 100 ml	IMAX	-	92a.47(a)(4)
Fecal Coliform				
(10/1 – 4/30)	2,000 / 100 ml	Geo Mean	-	92a.47(a)(5)
Fecal Coliform				
(10/1 – 4/30)	10,000 / 100 ml	IMAX	-	92a.47(a)(5)
Total Residual Chlorine	0.5	Average Monthly	-	92a.48(b)(2)

Comments: Water Quality Analysis Modeling for CBOD5, DO and Ammonia-Nitrogen is not necessary, and we will again re-impose Federal Minimum Secondary Effluent Limitations due to the large dilution available in the Youghiogheny River. Q7-10 flow of the Youghiogheny River at the point of discharge is 510 cfs. The instream to wasteflow dilution ration = total stream flow (515.135 cfs) / discharge flow (5.135 cfs) = 100/1.

For existing discharges (NPDES Renewal Applications), if WQM7.0 modeling results for summer indicates that an average monthly warm period limit of 25 mg/L (default in model) is acceptable for ammonia-nitrogen, a year-round monitoring requirement, at a minimum should be established. Due to the large dilution ration discussed above, assume that a monthly warm period limit of 25 mg/L is acceptable for ammonia-nitrogen and impose a year-round monitoring requirement for ammonia-nitrogen that is consistent with Table 6-3 of the Permit Writers Manual. Application data for Outfall # 001 indicates that the max average monthly concentration value of ammonia-nitrogen in the discharge is 5.96 mg/L.

The attached TRC\_CALC Spreadsheet confirms that the above Technology-Based Limitation for TRC applies to this discharge.

#### Water Quality-Based Limitations

A "Reasonable Potential Analysis" (Attachment Toxic Management Spreadsheet) was conducted. No limitations were determined through water quality modeling, using DEPs Toxic Management Spreadsheet (TMS) Version 1.1, and no WQBELs will be imposed on this facility during this permit cycle. The TMS recommended Monitoring for total copper because the discharge concentration is greater than 10% of the WQBEL.

For modeling purposes, the river width is 246 ft, the river depth is 1.16 ft, and velocity is 1.8 fps. Data taken previous Fact Sheet.

## **Best Professional Judgment (BPJ) Limitations**

Comments: A monitoring requirement for DO was imposed in the previously issued NPDES Renewal Permit. Review of eDMR data shows that the facility consistently reports a minimum DO concentration value greater than 4.0 mg/L.

A Dissolved Oxygen minimum limitation of 4.0 mg/L will be implemented based on the standard in 25 PA Code Chapter 93 and best professional judgment (BPJ).

## Anti-Backsliding

Section 402(o) of the Clean Water Act (CWA), enacted in the Water Quality Act of 1987, establishes anti-backsliding rules governing two situations. The first situation occurs when a permittee seeks to revise a Technology-Based effluent limitation based on BPJ to reflect a subsequently promulgated effluent guideline which is less stringent. The second situation addressed by Section 402(o) arises when a permittee seeks relaxation of an effluent limitation which is based upon a State treatment standard of water quality standard.

Previous limits can be used pursuant to EPA's anti-backsliding regulation 40 CFR 122.44 (I) Reissued permits. (1) Except as provided in paragraph (I)(2) of this section when a permit is renewed or reissued. Interim effluent limitations, standards or conditions must be at least as stringent as the final effluent limitations, standards, or conditions in the previous permit (unless the circumstances on which the previous permit was based have materially and substantially changed since the time the permit was issued and would constitute cause for permit modification or revocation and reissuance under §122.62). (2) In the case of effluent limitations established on the basis of Section 402(a)(1)(B) of the CWA, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 304(b) subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit.

The facility is not seeking to revise the previously permitted effluent limits.

## Additional Considerations:

For pH, DO and TRC, a monitoring frequency 1/day has been imposed. In general, less frequent monitoring may be established only when the permittee demonstrates that there will be no discharge on days where monitoring is not required.

Nutrient monitoring is required to establish the nutrient load from the wastewater treatment facility and the impacts that load may have on the quality of the receiving stream(s). A 1/quarter monitor and report requirement for Total N & Total P has been added to the permit as per Chapter 92.a.61.

Mass loading limits are applicable for publicly owned treatment works. Current policy requires average monthly mass loading limits be established for CBOD5, TSS, and NH<sub>3</sub>-N and average weekly mass loading limits be established for CBOD5 and TSS. Average monthly mass loading limits (lbs/day) are based on the formula: design flow (MGD) x concentration limit (mg/L) x conversion factor (8.34).

For POTWs with design flows greater than 2,000 GPD influent BOD<sub>5</sub> and TSS monitoring must be established in the permit, and the monitoring should be consistent with the same frequency and sample type as is used for other effluent parameters.

Monitoring frequency for the proposed effluent limits are based upon Table 6-3, Self-Monitoring Requirements for Sewage Dischargers, from the Departments Technical Guidance for the Development and Specification of Effluent Limitations. Please note that Monitoring Requirements were changed for Flow to 2/week Metered to be consistent with the guidance.

## Total Dissolved Solids (TDS) and its Major Constituents

Total Dissolved Solids (TDS) and its major constituents including sulfate, chloride, and bromide have emerged as pollutants of concern in several major watersheds in the Commonwealth. The conservative nature of these solids allows them to accumulate in surface waters and they may remain a concern even if the immediate downstream public water supply is not directly impacted. Bromide has been linked to formation of disinfection byproducts at increased levels in public water systems.

Based on these concerns and under the authority of §92a.61, DEP has determined it should implement increased monitoring in NPDES permits for these parameters: TDS, sulfate, chloride, bromide, and 1,4-dioxane.

Increased monitoring in NPDES permits will only occur when the following conditions are met:

- Where the concentration of TDS in the discharge exceeds 1,000 mg/L, or the net TDS load from a discharge exceeds 20,000 lbs/day, and the discharge flow exceeds 0.1 MGD, Part A of the permit should include monitor and report for TDS, sulfate, chloride, and bromide. Discharges of 0.1 MGD or less should monitor and report for TDS, sulfate, chloride if the concentration of TDS in the discharge exceeds 5,000 mg/L.
- Where the concentration of bromide in a discharge exceeds 1 mg/L and the discharge flow exceeds 0.1 MGD, Part
  A of the permit should include monitor and report for bromide. Discharges of 0.1 MGD or less should monitor and
  report for bromide if the concentration of bromide in the discharge exceeds 10 mg/L.
- Where the concentration of 1,4-dioxane (CAS 123-91-1) in a discharge exceeds 10 µg/L and the discharge flow exceeds 0.1 MGD, Part A of the permit should include monitor and report for 1,4-dioxane. Discharges of 0.1 MGD or less should monitor and report for 1,4-dioxane if the concentration of 1,4-dioxane in the discharge exceeds 100 µg/L.

Monitoring is not required for TDS, sulfate, chloride, bromide & 1,4-dioxane. Concentrations of bromide is less than 1 mg/L (application reports 0.078 mg/L), TDS is less than 1000 mg/L (application reports 440 mg/L) & 1,4-dioxane is less than 10 ug/L (application reports ND and the QL used is 10.4 ug/L).

## Whole Effluent Toxicity (WET)

For Outfall 001, Acute Chronic WET Testing was completed:

- $\boxtimes$ 
  - For the permit renewal application (4 tests). Quarterly throughout the permit term.
  - Quarterly throughout the permit term and a TIE/TRE was conducted.
- Other:

The dilution series used for the tests was: 100%, 60%, 30%, 2%, and 1%. The Target Instream Waste Concentration (TIWC) to be used for analysis of the results is: 2.0.

## TST Data Analysis

(NOTE – In lieu of recording information below, the application manager may attach the DEP WET Analysis Spreadsheet).

	Ceriodaphnia R	Results (Pass/Fail)	Pimephales Results (Pass/Fail)		
Test Date	Survival	Reproduction	Survival	Growth	
11/01/2016	PASS	PASS	PASS	PASS	
10/31/2017	PASS	PASS	PASS	PASS	
05/22/2018	PASS	PASS	PASS	PASS	
10/01/2019	PASS	PASS	PASS	PASS	

\* A "passing" result is that in which the replicate data for the TIWC is not statistically significant from the control condition. This is exhibited when the calculated t value ("T-Test Result") is greater than the critical t value. A "failing" result is exhibited when the calculated t value ("T-Test Result") is less than the critical t value.

Is there reasonable potential for an excursion above water quality standards based on the results of these tests? (NOTE - In general, reasonable potential is determined anytime there is at least one test failure in the previous four tests).

🗌 YES 🖂 NO

Comments: N/A

## Evaluation of Test Type, IWC and Dilution Series for Renewed Permit

Acute Partial Mix Factor (PMFa): 0.058 Chronic Partial Mix Factor (PMFc): 0.400

## 1. Determine IWC – Acute (IWCa):

 $(Q_d \times 1.547) / ((Q_{7-10} \times PMFa) + (Q_d \times 1.547))$ 

[(3.313 MGD x 1.547) / ((510 cfs x 0.058) + (3.313 MGD x 1.547))] x 100 = 14.81%

Is IWCa < 1%? YES X NO (YES - Acute Tests Required OR NO - Chronic Tests Required)

If the discharge is to the tidal portion of the Delaware River, indicate how the type of test was determined:

N/A

Type of Test for Permit Renewal: Chronic

## 2a. Determine Target IWCa (If Acute Tests Required)

**TIWCa =** 14.81 / 0.3 = 49.37%

## 2b. Determine Target IWCc (If Chronic Tests Required)

 $(Q_d \times 1.547) / (Q_{7-10} \times PMFc) + (Q_d \times 1.547)$ 

[(3.313 MGD x 1.547) / ((510 cfs x 0.400) + (3.313 MGD x 1.547))] x 100 = **2.0%** 

## 3. Determine Dilution Series

(NOTE – check Attachment C of WET SOP for dilution series based on TIWCa or TIWCc, whichever applies).

Dilution Series = 100%, 60%, 30%, 2%, and 1%.

## WET Limits

Has reasonable potential been determined? YES 
NO

Will WET limits be established in the permit?  $\Box$  YES  $\boxtimes$  NO

If WET limits will be established, identify the species and the limit values for the permit (TU).

## N/A

If WET limits will not be established, but reasonable potential was determined, indicate the rationale for not establishing WET limits:

<mark>N/A</mark>

## **Proposed Effluent Limitations and Monitoring Requirements**

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

#### ☑ Recommended WQBELs & Monitoring Requirements

## No. Samples/Month: 4

	Mass	Limits		Concentra	tion Limits				
Pollutants	AML (lbs/day)	MDL (lbs/day)	AML	MDL	IMAX	Units	Governing WQBEL	WQBEL Basis	Comments
Total Copper	Report	Report	Report	Report	Report	µg/L	65.9	AFC	Discharge Conc > 10% WQBEL (no RP)

#### Other Pollutants without Limits or Monitoring

The following pollutants do not require effluent limits or monitoring based on water quality because reasonable potential to exceed water quality criteria was not determined and the discharge concentration was less than thresholds for monitoring, or the pollutant was not detected and a sufficiently sensitive analytical method was used (e.g., <= Target QL).

Governing WQBEL	Units	Comments
N/A	N/A	PWS Not Applicable

Applicant:	North Huntingdon Township MA
Name of plant:	Youghiogheny STP
Permit Number:	PA0027243
Municipality:	North Huntingdon Township
County:	Westmoreland
Receiving stream:	Youghiogheny River

The following program will calulate partial mix factors for acute and chronic conditions:

#### calculated fields

net stream flow (Qs cfs)=	510
discharge flow (Qd mgd)=	3.313
velocity (fps)=	1.8
width (feet) =	246
depth (feet) =	1.16
slope (ft/ft) =	0.00021
complete mix time (min) =	4490.55
complete mix time (mm) =	4490.00

or

complete mix time (min) =

FOR ACUTE CONDITIONS: IF COMPLETE MIX TIME < 15 MINUTES THEN PMF = 1, IF > 15 MINUTES CALCULATE PMFa

PMFa =

0.058 5.78 %

#### FOR CHRONIC CONDITIONS: IF COMPLETE MIX TIME < 720 MINUTES THEN PMF = 1, IF > 720 MINUTES CALCULATE PMFc

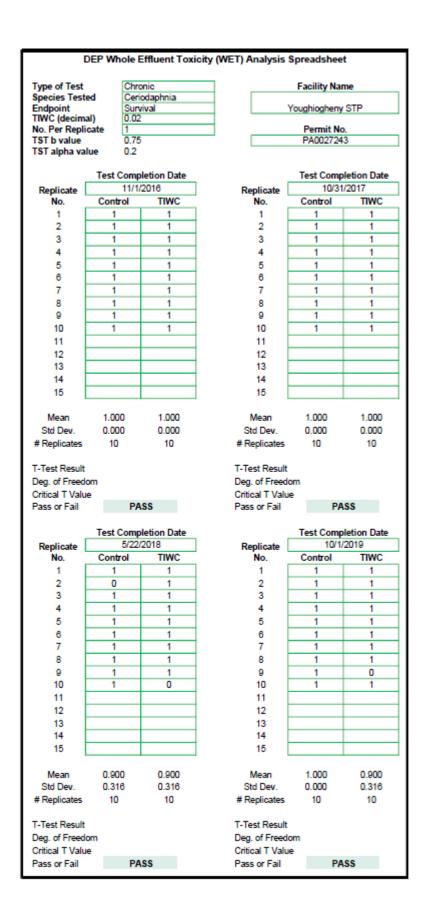

PMFc =	or	0.400 40.04 %	]	
IWCc=[ Qd * 1.547 ] / [( Q	s*PMFc	c)+(Qd*1.547)] =	0.0245	
Target IWCc=IWCc/1=	I	0.024		2.45 %
IWCa=[ Qd * 1.547 ] / [( Q	s*PMFa	a ) + ( Qd * 1.547 )] =	0.1481	
Target IWCa=IWCa/0.3=	I	0.494 or		49.37 %
WET tests should pass if than the target IWCa (act		•		50 are greater

Program written by David Ponchione on April 8, 1999
