**Public Participation**

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Facility Description

The Spring Township Municipal Authority Water Treatment Plant treats surface water from a reservoir source for potable water distribution in Beaver Springs in Spring Township, Snyder County. The wastewater from the filter backwash cycles enters two settling lagoons. Overflow from the lagoons is collected in a discharge box and is discharged to Kern Run via Outfall 001. Original construction and continued operation of the treatment units are covered under WQM Permit No. 5572202, originally issued March 30, 1973.

**Compliance History**

The facility was most recently inspected by DEP on November 20, 2023. No violations were noted during the inspection and no impacts were noted downstream of the outfall in Kern Run.

The following effluent violations occurred during the existing permit's term:

| Noncompliance Date | Noncompliance Description     | Parameter        | Sample Value | Violation Condition | Permit Value | Units | SBC    |
|--------------------|-------------------------------|------------------|--------------|---------------------|--------------|-------|--------|
| 10/19/2020         | Violation of permit condition | Manganese, Total | 1.7          | >                   | 1            | mg/L  | Avg Mo |

There are no open violations associated with the permittee.

**Development of Effluent Limitations**

Outfall No. 001 Design Flow (MGD) 0.040  
Latitude 40° 44' 25.46" Longitude -77° 10' 44.63"  
Wastewater Description: Water Treatment Effluent

**Technology-Based Limitations**

The following technology-based limitations apply, subject to water quality analysis and BPJ where applicable:

| Parameter                      | Limit (mg/l)   | SBC             | State Regulation |
|--------------------------------|----------------|-----------------|------------------|
| pH                             | 6.0 – 9.0 S.U. | IMIN - IMAX     | 95.2(1)          |
| Iron, Dissolved <sup>(1)</sup> | 7.0            | IMAX            | 95.2(4)          |
| Oil and Grease <sup>(1)</sup>  | 15             | Average Monthly | 95.2(2)(ii)      |
|                                | 30             | IMAX            | 95.2(2)(ii)      |
| Total Residual Chlorine        | 0.5            | IMAX            | 92a.48(b)(2)     |

<sup>(1)</sup> Sample results for dissolved iron and oil and grease submitted with the application indicate that neither of the pollutants approach the above technology limits. Since effluent concentrations do not approach the technology-based standards it is not appropriate to establish limits or monitoring requirements for dissolved iron or oil and grease in the permit.

**Water Quality-Based Limitations**

A "Reasonable Potential Analysis" was conducted in the Toxics Management Spreadsheet v1.4 ("TMS") to determine if WQBELs are necessary to protect the receiving surface water. Input values were taken from existing permit limits, when applicable, or the application's pollutant groups. The spreadsheet's recommendations are as follows:

| Pollutants     | Mass Limits   |               | Concentration Limits |        |        |       | Governing WQBEL | WQBEL Basis | Comments                           |
|----------------|---------------|---------------|----------------------|--------|--------|-------|-----------------|-------------|------------------------------------|
|                | AML (lbs/day) | MDL (lbs/day) | AML                  | MDL    | IMAX   | Units |                 |             |                                    |
| Total Aluminum | 1.81          | 2.82          | 5.41                 | 8.45   | 13.5   | mg/l  | 5.41            | AFC         | Discharge Conc ≥ 50% WQBEL (RP)    |
| Total Iron     | Report        | Report        | Report               | Report | Report | mg/l  | 16.9            | CFC         | Discharge Conc > 10% WQBEL (no RP) |

Existing total residual chlorine limits were evaluated using the TRC Evaluation spreadsheet. The spreadsheet's results indicate that the existing limits are protective of Kern Run. Accordingly, DEP recommends that the existing limits remain in the permit.

**Best Professional Judgment (BPJ) Limitations**

| Parameter              | Limit (mg/l)   | SBC             | Guidance   |
|------------------------|----------------|-----------------|--|
| Total Suspended Solids | 30             | Average Monthly | Technology-Based Control Requirements for Water Treatment Plant Wastes (362-2183-003, 10/1/97) |
|                        | 60             | Daily Maximum   |  |
| pH                     | 6.0 – 9.0 S.U. | Min – Max       |  |
| Iron, Total            | 2.0            | Average Monthly |  |
|                        | 4.0            | Daily Maximum   |  |
| Aluminum, Total        | 4.0            | Average Monthly |  |
|                        | 8.0            | Daily Maximum   |  |
| Manganese, Total       | 1.0            | Average Monthly |  |
|                        | 2.0            | Daily Maximum   |  |

The above effluent limits are recommended best practicable control technology currently available (BPT) for water treatment plant wastewater by DEP guidance "Technology-Based Control Requirements for Water Treatment Plant

*Wastes*" (362-2183-003, 10/1/97). These effluent limits reflect lagoon or settling tank treatment of different types of sludges (e.g., presettling, coagulant settling, softening sludge) and filter backwash wastewater. A higher degree of treatment such as best conventional pollutant control technology (BCT) or best available technology economically achievable (BAT) is only appropriate when recycle and/or reuse is employed by the permittee. The BPT limits are both existing and more stringent than the abovementioned recommended TMS requirements. DEP recommends the BPT limits remain in the permit.

### **Chesapeake Bay Requirements**

The discharge is not anticipated to contribute to the net loading of total nitrogen or total phosphorus in the watershed. Accordingly, per the Phase 3 Wastewater Supplemental to Pennsylvania's Chesapeake Bay Watershed Implementation Plan, no cap loads or reporting requirements are necessary.

### **Anti-Backsliding**

No limitations in this proposed draft permit have been made less stringent consistent with the anti-back-sliding requirements of the Clean Water Act and 40 CFR 122.44(l).

**Existing Effluent Limitations and Monitoring Requirements**

The existing effluent limitations and monitoring requirements are as follows:

**Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.**

| Parameter                     | Effluent Limitations |                  |                       |                 |               |                  | Monitoring Requirements       |                      |
|-------------------------------|----------------------|------------------|-----------------------|-----------------|---------------|------------------|-------------------------------|----------------------|
|                               | Mass Units (lbs/day) |                  | Concentrations (mg/L) |                 |               |                  | Minimum Measurement Frequency | Required Sample Type |
|                               | Average Monthly      | Average Weekly   | Minimum               | Average Monthly | Daily Maximum | Instant. Maximum |                               |                      |

Compliance Sampling Location: Outfall 001

**Proposed Effluent Limitations and Monitoring Requirements**

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (386-0400-001), SOPs and/or BPJ.

**Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.**

**Outfall 001 , Continued (from Permit Effective Date through Permit Expiration Date )**

| Parameter       | Effluent Limitations |                  |                       |                 |               |                  | Monitoring Requirements       |                      |

Compliance Sampling Location: Outfall 001

## Discharge Information

Instructions

Discharge

Stream

Facility: Spring Township Municipal Authority WTP

NPDES Permit No.: PA0111635

Outfall No.: 001

Evaluation Type: Major Sewage / Industrial Waste

Wastewater Description: Water treatment plant filter backwash

☒ **Other Pollutants without Limits or Monitoring**

The following pollutants do not require effluent limits or monitoring based on water quality because reasonable potential to exceed water quality criteria was not determined and the discharge concentration was less than thresholds for monitoring, or the pollutant was not detected and a sufficiently sensitive analytical method was used (e.g., <= Target QL).

| Pollutants                   | Governing WQBEL | Units | Comments                   |
