Client ID	<u>132246</u>	Site ID	<u>503234</u>
SIC Code	<u>4952</u>	Municipality	<u>Washington Township</u>
SIC Description	<u>Trans. & Utilities - Sewerage Systems</u>	County	<u>Westmoreland</u>
Date Application Received	<u>June 26, 2020</u>	WQM Required	<u>N/A</u>
Date Application Accepted	<u>July 9, 2020</u>	WQM App. No.	<u></u>
Project Description	<u>Application for Renewal of an NPDES Permit</u>		

Summary of Review

The permittee has applied for a renewal of NPDES Permit No. PA0218120. NPDES Permit No. PA0218120 was previously issued by the PA Department of Environmental Protection (DEP) on December 14, 2015 and expired on December 31, 2020. The facility was granted an admirative extension.

This STP consists of a septic tank, sand filter, and chlorine disinfection. This facility is not eligible for a general permit because it discharges to a high-quality stream.

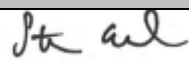

The previous sampling frequency for TRC was 1/ 6 months. The sampling frequency is being changed for this parameter to 1/month. This is in accordance with Table 6.3 of DEP's Permit Writer's Manual.

The previous monitoring frequency for Flow was 1/ 6 months. The monitoring frequency is being changed for is being changed for this parameter to 1/year. This is in accordance with Table 6.3 of DEP's Permit Writer's Manual.

The previous sampling frequency for pH, BOD5, TSS, and fecal coliform were 1/ 6 months. The sampling frequencies are being changed for is being changed for this parameter to 1/year. This is in accordance with Table 6.3 of DEP's Permit Writer's Manual.

Per current policy, effluent limitations and monitoring requirements listed on page 5 of this Fact Sheet, at a minimum, will be established for individual SRSTP permit renewals. The limitations reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

The applicant does not use eDMR and current policy does not require eDMR to be used for SRSTPs.

Approve	Deny	Signatures	Date

X		 James M. Vanek, PE / Acting Environmental Engineer Manager	May 24, 2021

Summary of Review

Sewage discharges with design flows < 2,000 gpd do not require monitoring for Total Nitrogen and Total Phosphorus in new and reissued permits.

Technology-based effluent limits for pH will be imposed based upon State Regulation 95.2(1).

Public Participation

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Changes Since Last Permit Issuance:

Other Comments:

Other Comments: This facility discharges to the Kiskiminetas-Conemaugh River Watersheds. This Watershed has a Final TMDL and is impaired by metals. Abandoned mine drainage is a source of such impairment. This sewage discharge is not expected to contribute to the stream impairment. No WLAs have been developed for this sewage discharge, and they are not expected to contribute to the stream impairment for these pollutants. No monitoring requirements for Total Iron, Total Manganese and Total Aluminum will be imposed on this facility.

Summary of DMRs:	
Summary of Inspections:	

Other Comments: A compliance check was requested on May 20, 2021 and the results are pending

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.

Parameter	Effluent Limitations						Monitoring Requirements	
	Mass Units (lbs/day) ⁽¹⁾		Concentrations (mg/L)				Minimum ⁽²⁾ Measurement Frequency	Required Sample Type
	Average Monthly	Average Weekly	Minimum	Annual Average	Maximum	Instant. Maximum		
Flow (MGD)	Report Annl Avg	XXX	XXX	XXX	XXX	XXX	1/year	Grab
pH (S.U.)	XXX	XXX	6.0 Inst Min	XXX	XXX	9.0	1/year	Grab
