Client ID	251326	Site ID	461639
SIC Code	4953	Municipality	Boggs Township
SIC Description	Trans. & Utilities - Refuse Systems	County	Clearfield
Date Application Received	October 2, 2023	EPA Waived?	No
Date Application Accepted	October 17, 2023	If No, Reason	Major Facility
Purpose of Application	Camp Hope Run Landfill IWTP and stormwater discharges.		

Summary of Review

This is a permit renewal for the discharge associated with a proposed landfill leachate treatment system and proposed stormwater discharges. The landfill has not yet been constructed so there are currently no active discharges.

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Facility/Treatment Summary

The proposed treatment facility would treat landfill leachate and sewage produced at the proposed Camp Hope Run Landfill. The landfill is proposed to be located on the site of a former strip mine where two existing passive abandoned mine drainage treatment systems currently exist (permitted under NPDES Permit No. PA0232653). A conceptual treatment process has been developed based upon influent leachate characterization and preliminary effluent limits provided to HRG, Inc on behalf of PA Waste LLC in a letter dated December 19, 2012. The treatment of the leachate and sewage is currently proposed as follows:

1. Equalization
2. Screening
3. Chemical Precipitation
4. Sequencing Batch Reactors (SBRs)
5. Membrane Filtration
6. Disinfection
7. Sludge Digestion
8. Sludge Dewatering

See Appendix A for the process flow diagram.

The treated landfill leachate and sewage will be discharged to Clearfield Creek via Outfall 001 at river mile 10.39. The proposed discharge will be located at latitude 40° 57' 16" N and longitude 78° 24' 12" W. The proposed discharge rates, in MGD, are as follows:

Wastewater	Maximum Daily	Monthly Average	Long-Term Average
Landfill Leachate	0.073	0.049	0.049
Sewage	0.002	0.001	0.001
Total	*0.075*	*0.050*	*0.050*

Stormwater Outfalls 003 through 009 are sedimentation basin overflows located throughout the property.

See Appendix B for a location map.

Discharge, Receiving Waters and Water Supply Information

Outfall 001 discharges treated landfill leachate and sewage from the onsite treatment plant.

Outfall No.	**001**	Design Flow (MGD)	0.049

Receiving Surface Waters

Outfall 001 will discharge to Clearfield Creek, stream code 26107. 25 Pa. Code § 93.9l classifies the creek as a Warm Water Fishes surface water. The discharge is located in drainage basin L, watershed 8-C. Clearfield Creek has been assigned a total maximum daily load (TMDL) to address impairment caused by metals from abandoned mined drainage. The TMDL was finalized by DEP in 2007. The TMDL establishes wasteload and load allocations for aluminum, iron, and manganese as well as recommending pH remain between 6.0 and 9.0. Since these parameters are expected to be in the treated effluent, the TMDL will be taken into consideration while developing the effluent limitations. Please refer to the "Development of Effluent Limitation" section below for further details.

Outfalls 003 through 009 are proposed stormwater outfalls that will potentially discharge via sedimentation basin overflows. Outfalls 003, 004, and 005 will discharge to Sanborn Run; Outfall 006 to Camp Hope Run; and Outfalls 007, 008, and 009 to an unnamed tributary to Sanborn Run.

Outfall 002 is for the site's AMD treatment system discharge and is not included in this permit. The AMD treatment system discharge is covered under NPDES Permit No. PA0232653.

The nearest downstream water supply intake is Shawville Power, LLC located in Shawville, PA on the West Branch Susquehanna River approximately 18 river miles downstream of the discharges. The discharges are not expected to impact the intake.

The drainage area of the creek above Outfall 001 is 310.55 square miles and provides 35.1 CFS at Q_{7-10} conditions. The Q_{7-10} was determined by using Stream Gage No. 01541500 on Clearfield Creek at Dimeling, PA as a reference gage.

See Appendix C for upstream drainage area information.

Compliance History

Since this facility has not yet been constructed there is no associated compliance history.

There are no open violations associated with the permittee.

Development of Effluent Limitations

Outfall No. 001 **Design Flow (MGD)** 0.049
Latitude 40º 57' 16.00" **Longitude** -78º 24' 12.00"
Wastewater Description: IW Process Effluent with ELG, Sewage Effluent

Technology-Based Limitations

The following technology-based limitations apply, subject to water quality analysis and BPJ where applicable:

Parameter	Limit (mg/L)	SBC	Federal Regulation	State Regulation
BOD	140	Maximum Daily	445.21	
	45	Average Weekly	133.102(a)(4)(ii)	92a.47(a)(2)
	37	Average Monthly	445.21	
	30	Average Monthly	133.102(a)(4)(i)	92a.47(a)(1)
Total Suspended Solids	88	Maximum Daily	445.21	
	45	Average Weekly	133.102(b)(2)	92a.47(a)(2)
	30	Average Monthly	445.21	
	30	Average Monthly	133.102(b)(1)	92a.47(a)(1)
Ammonia-N	10	Maximum Daily	445.21	
	4.9	Average Monthly	445.21	
α-Terpineol	0.033	Maximum Daily	445.21	
	0.016	Average Monthly	445.21	
Benzoic acid	0.12	Maximum Daily	445.21	
	0.071	Average Monthly	445.21	
p-Cresol	0.025	Maximum Daily	445.21	
	0.014	Average Monthly	445.21	
Phenol	0.026	Maximum Daily	445.21	
	0.015	Average Monthly	445.21	
Zinc	0.2	Maximum Daily	445.21	
	0.11	Average Monthly	445.21	
pH	6.0 – 9.0 S.U.	Min – Max	445.21 and 133.102(c)	95.2(1)
Dissolved Iron	7.0	IMAX		95.2(4)
Oil and Grease	15	Average Monthly		95.2(2)(ii) and 92a.47(a)(7)
	30	IMAX		95.2(2)(ii) and 92a.47(a)(7)
Fecal Coliform (5/1 – 9/30)	200 / 100 ml	Geo Mean	-	92a.47(a)(4)
	1,000 / 100 ml	IMAX	-	92a.47(a)(4)
Fecal Coliform (10/1 – 4/30)	2,000 / 100 ml	Geo Mean	-	92a.47(a)(5)
	10,000 / 100 ml	IMAX	-	92a.47(a)(5)

The proposed discharge is, in part, regulated by 40 CFR Part 445, Subpart B. Since this discharge is a new source as defined in 40 CFR § 401.11(e), it is subject to new source performance standard limitations in § 445.24. Section 445.24 states, “Any new source subject to this subpart must achieve the following performance standards: Standards are the same as those specified in § 445.21.” Section 445.21 limitations represent the application of best practicable technology (BPT).

In addition to the federal regulations, 25 Pa. Code Chapter 95 provides effluent limitations for industrial discharges.

The permittee has also proposed to treat sewage produced onsite. Discharges of sewage are subject to minimum secondary treatment standards at 40 CFR § 133.102 and 25 Pa. Code § 92a.47.

The permittee has proposed to disinfect effluent using ultraviolet light. Accordingly, total residual chlorine requirements at 25 Pa. Code § 92a.48(b) are not necessary.

Water Quality-Based Limitations

There have been no proposed changes to the characteristics of the discharge, and DEP is not aware of any significant changes to Clearfield Creek at Outfall 001. Accordingly, the previous WQBEL analysis is still appropriate and is summarized in the following paragraphs.

The existing limits were developed by modeling in-stream conditions to determine if water quality-based effluent limitations (WQBELs) are appropriate. Models were created using WQM 7.0 v1.1 for CBOD5, ammonia-N, and dissolved oxygen and PENTOXSD 2.0d for toxics. Since a new landfill discharge will most likely not reach maximum daily values within the first permit cycle, consistent with recommendations in the *Technical Guidance for the Development and Specification of Effluent Limitations and Other Permit Conditions in NPDES Permits (362-0400-001)*, the long-term average flow was used in both models.

WQM 7.0 v1.1 is a multiple discharge model that assumes instantaneous mixing with the receiving surface water upon discharge. The reach chosen to model the in-stream characteristics of Clearfield Creek is appropriate as a recovery in dissolved oxygen levels is demonstrated. The input value for CBOD5 is based on 40 CFR § 445.21, which recommends a maximum daily limitation of 140 mg/L. Assuming all BOD is carbonaceous is a conservative approach and is appropriate for modeling purposes. Additionally, using the least stringent technology-based limitation poses a conservative "worst case" scenario. The deoxygenation rate was adjusted by a factor of 0.6 to account for the large BOD input value, which is outlined in the *Technical Guidance for WQM 7.0 for Windows Wasteload Allocation Program for Dissolved Oxygen and Ammonia Nitrogen Version 1.0 (386-2000-016)*. The ammonia-n input value of 10 mg/l is also based on § 445.21. The model does not recommend water quality-based effluent limitations with regards to CBOD5, ammonia-N, or dissolved oxygen. The output is as follows:

Parameter	Effluent Limit (mg/L)		
	30 Day Average	Maximum	Minimum
CBOD5	140	--	--
Ammonia-N	10	20	--
Dissolved Oxygen	--	--	3

Unlike WQM 7.0 v1.1, the PENTOXSD v2.0d is a single discharge model that does not assume instantaneous mixing with the receiving surface water upon discharge, but instead, assigns a partial mixing factor based on surface water and discharge characteristics. Background concentration data for Clearfield Creek was obtained from DEP's Water Quality Network. As recommended by DEP's standard operation procedures, the 90th percentile of background concentrations for each parameter were calculated and entered into PENTOXSD. Model inputs for the discharge from Outfall 001 were based off two "categories". The first input category used TBELs from the federal and state regulations, while the second input category used maximum daily values reported in the pollutant groups from the application. Whichever category yielded the more stringent (larger) input value was then entered into the Toxics Screening Analysis Spreadsheet v1.1, which compares the input value to the most stringent criterion established in 25 Pa. Code Chapter 93 for each parameter and determines if it is a parameter of concern. All parameters of concern were entered into PENTOXSD, which recommends a WQBEL. The recommended WQBEL is then placed into the Toxics Screening Analysis Spreadsheet v1.1, which recommends monitoring requirements, effluent limits, or taking no action.

Based on the Toxics Screening Analysis Spreadsheet, reporting requirements were established for total antimony, hexavalent chromium, total copper, and total lead. Limits were established for total thallium and 1,4-dicholorobenzene. The limits for total aluminum, total iron, and total manganese are addressed in the TMDL Considerations section below.

See Appendix D for the previous modeling data.

TMDL Considerations

In accordance with 40 CFR § 122.4, DEP cannot allow a discharge to contribute to impairment of a surface water. Since this discharge was not in existence during the development of the TMDL and no reserve was allocated for future discharges, water quality criteria specified in 25 Pa. Code Chapter 93 for the pollutants of concern (aluminum, iron, manganese) were established in the previous review. Limitations established at or below criteria cannot be considered to contribute to impairment. Since the majority of landfill leachate is caused by stormwater percolating through the deposited waste, meaning the discharge is mostly dependent on stormwater; assimilative capacity of Clearfield Creek will not be decreased. The Chapter 93 criterion values are as follows:

Parameter	Criterion Value (mg/L)
Total Aluminum	1.50
Total Iron	1.00
Total Manganese	0.75

DEP is not aware of any changes to the Clearfield Creek TMDL that would change the justification for setting limits at criteria for aluminum, iron, or manganese. Accordingly, the limits should remain in the permit.

Total Dissolved Solids, Sulfate, Chloride, and Bromide Considerations

This is a new (proposed) discharge treating wastewater other than natural gas wastewater (i.e., landfill leachate) that will be discharging below the 5,000 lbs/day *de minimus* threshold value set forth in 25 Pa. Code § 95.10(a)(7). Consequently, the treatment standards set forth in § 95.10 are not applicable. However, since the proposed landfill will be located on a former strip mine that will require lime stabilization of the overburden (which will be disposed of in the landfill), it is important to track the amount of TDS being discharged. Therefore, reporting requirements will be established for TDS and its main constituents, sulfate, chloride, and bromide.

Best Professional Judgment (BPJ) Limitations

To help further characterize the wastewater, DEP has proposed to establish quarterly sampling for four PFAS parameters; PFOA, PFOS, HFPO-DA, and PFBS. The permittee may discontinue monitoring for PFOA, PFOS, HFPO-DA, and PFBS if the results in four consecutive monitoring periods indicate non-detect results at or below Quantitation Limits of 4.0 ng/L for PFOA, 3.7 ng/L for PFOS, 3.5 ng/L for PFBS and 6.4 ng/L for HFPO-DA. When monitoring is discontinued, permittees must enter a No Discharge Indicator (NODI) Code of “GG” on the discharge monitoring reports.

An annual reporting requirement for E. Coli is proposed per the 2017 Triennial Review of Water Quality Standards, published in the PA Bulletin on July 11, 2020.

Chesapeake Bay

Per Phase 3 of Pennsylvania’s Watershed Implementation Plan Wastewater Supplement, Outfall 001 at the Camp Hope Run Landfill is considered a non-significant industrial discharge. The WIP states, “For new non-significant IW discharges, the permit writer must document in the fact sheet that adequate available Capacity for TN and TP remains to authorize the new permit. Permit writers will contact DEP’s Bureau of Clean Water for assistance.”

When the existing permit was issued, DEP did not anticipate sufficient capacity for total nitrogen or total phosphorus. Accordingly, cap loads of 0 lbs/year for total nitrogen and total phosphorus were established at Outfall 001. DEP is recommending that the cap loads remain in the permit at 0 lbs/year.

Anti-Backsliding

No limits or monitoring requirements are proposed to be made less stringent. Anti-backsliding should not impact the permit.

Development of Effluent Limitations

Outfall Nos. 003 - 009 **Design Flow (MGD)** n/a
Latitude Various **Longitude** Various
Wastewater Description: Stormwater

Technology-Based Limitations

There are no applicable technology-based effluent limitations for stormwater associated with landfills.

Water Quality-Based Limitations

DEP does not have an established procedure for modeling stormwater discharges. Accordingly, no water quality-based limitations are proposed.

Best Professional Judgment (BPJ) Limitations

Stormwater discharges associated with landfills are covered under Appendix C of the PAG-03. Using best professional judgment, these requirements were established when the permit was first issued. Since this permit's issuance, Appendix C of the PAG-03 has expanded to now include monitoring requirements for total nitrogen and total phosphorus. DEP recommends the following requirements for stormwater Outfalls 003 through 009.

Pollutant	Monitoring Requirements		Benchmark Values
	Minimum Measurement Frequency	Sample Type	
Total Nitrogen (mg/L) (1)	1 / 6 months	Calculation	XXX
Total Phosphorus (mg/L)	1 / 6 months	Grab	XXX
pH (S.U.)	1 / 6 months	Grab	9.0
Total Suspended Solids (TSS) (mg/L)	1 / 6 months	Grab	100
Chemical Oxygen Demand (COD) (mg/L)	1 / 6 months	Grab	120
Ammonia-Nitrogen (mg/L)	1 / 6 months	Grab	XXX
Total Iron (mg/L)	1 / 6 months	Grab	XXX

(1) Total Nitrogen is the sum of Total Kjeldahl-N (TKN) plus Nitrite-Nitrate as N (NO_2+NO_3-N), where TKN and NO_2+NO_3-N are measured in the sample.

TMDL Considerations

In accordance with 40 CFR § 122.4, DEP cannot allow a discharge to contribute to impairment of a surface water. Since this discharge was not in existence during the development of the TMDL and no reserve was allocated for future discharges, water quality criteria specified in 25 Pa. Code Chapter 93 for the pollutants of concern (aluminum, iron, manganese) were established in the previous review. Limitations established at or below criteria cannot be considered to contribute to impairment. Since these are stormwater-dependent discharges, assimilative capacity of the receiving waters should be decreased. The Chapter 93 criterion values are as follows:

Parameter	Criterion Value (mg/L)
Total Aluminum	1.50
Total Iron	1.00
Total Manganese	0.75

DEP is not aware of any changes to the Clearfield Creek TMDL that would change the justification for setting limits at criteria for aluminum, iron, or manganese. Accordingly, the limits should remain in the permit.

Anti-Backsliding

No limits or monitoring requirements are proposed to be made less stringent. Anti-backsliding should not impact the permit.

Whole Effluent Toxicity (WET)

No WET testing was completed for the application since this is still a proposed discharge.

Acute Partial Mix Factor (PMFa): **0.15** Chronic Partial Mix Factor (PMFc): **1.0**

1. Determine IWC – Acute (IWCa):

$(Q_d \times 1.547) / ((Q_{7\text{-}10} \times PMFa) + (Q_d \times 1.547))$

[(0.049 MGD x 1.547) / ((17.8 cfs x 0.15) + (0.049 MGD x 1.547))] x 100 = **2.8%**

Is IWCa < 1%? ☐ **YES** ☒ **NO**

Type of Test for Permit Renewal: **Chronic**

2. Determine Target IWCc

$(Q_d \times 1.547) / (Q_{7\text{-}10} \times PMFc) + (Q_d \times 1.547)$

[(0.049 MGD x 1.547) / ((17.8 cfs x 1.0) + (0.049 MGD x 1.547))] x 100 = **0.42%**

Since a target IWC of 0.42% is impracticable for a laboratory setting, it should be rounded up to 1% for determining the dilution series.

3. Determine Dilution Series

Dilution Series = 100%, 60%, 30%, 2%, and 1%.

WET Limits

Since this is a proposed discharge no reasonable potential has been determined and no WET limits will be established in the permit.

Existing Effluent Limitations and Monitoring Requirements

The existing limitations and monitoring requirements are as follows:

Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.

Parameter	Effluent Limitations						Monitoring Requirements	
	Mass Units (lbs/day)		Concentrations (mg/L)				Minimum Measurement Frequency	Required Sample Type
	Average Monthly	Daily Maximum	Minimum	Average Monthly	Daily Maximum	Instant. Maximum		
Flow (MGD)	Report	Report	XXX	XXX	XXX	XXX	Continuous	Metered
pH (S.U.)	XXX	XXX	6.0 Inst Min	XXX	XXX	9.0	1/day	Grab

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (386-0400-001), SOPs and/or BPJ.

Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.

Outfall 001, Continued (from Permit Effective Date through Permit Expiration Date)

Basin Characteristics Report

Date: Wed Feb 13 2013 09:30:09 Mountain Standard Time
NAD27 Latitude: 40,9544 (40 57 16)
NAD27 Longitude: -78,4040 (-78 24 14)
NAD83 Latitude: 40.9544 (40 57 16)
NAD83 Longitude: -78.4037 (-78 24 13)

Parameter	Value
Area in square miles	310.s5l
Mean Basin Elevation In feet	1730.81
Unadjusted basin slope, in degrees	6.91
Adjusted basin slope, in degrees	6.7,
Total stream length in miles	564.561
Stream density (miles/square mile)	1.821
Percent of area covered by lakes, ponds, reservoirs and wetlands	i.ol
Percent of area covered by carbonate bedrock	o.ol
Percent of area covered by glacial activity	0.01
Depth to rock in feet	4.5,
\ Mean annual precipitation in inches	41.61
ı Maximum Daily Temperature in degrees F	s6.sl
Percent of area covered by forest	79.91
Percentage of impervious area determined from NLCD 2001 impervious dataset	0.6l
Percent of area covered by urban land according to an enhanced version of NLCD 1992	1.61
Percentage of urban land cover determined from NLCD 2001 land cover dataset	7.0,
Drainage quality index from STATSGO	3.6,
X coordinate of the centroid, in map projection, meters	-43214.81
ı Y coordinate of the centroid, in map projection, meters	190127.51
X coordinate of the outlet, in map projection, meters	-33985.ol
I Y coordinate of the outlet, in map projection, meters	217075.ol
ı Longitude of the outlet, in decimal degrees	-78.403721

Fecal Coliform	Sewage	1000	IMAX	20	IMAX
Fecal Coliform	Sewage	2000	Geometric Mean	40	Geometric Mean
Fecal Coliform	Sewage	10000	IMAX	200	IMAX

COMBINED FLOW CONCENTRATION CALCULATOR
VERSION 1.0

Facility: **PA Waste LLC - Camp Hope Run Landfill**
NPDES Permit No.: **PA0232343**

Outfall: **001**
Q_{IW}: **0.049** MGD
Q_S: **0.001** MGD

Parameter	Industrial Concentration (mg/l)	SBC	Sewage Concentration (mg/l)	SBC	Combined Concentration (mg/l)	SBC
BOD	37	Average Monthly	30	Average Monthly	36.86	Average Monthly
BOD	140	Daily Maximum	45	Average Weekly	138.1	Daily Maximum
Total Suspended Solids	27	Average Monthly	30	Average Monthly	27.06	Average Monthly
Total Suspended Solids	88	Daily Maximum	45	Average Weekly	87.14	Daily Maximum

COMBINED FLOW LOADING CALCULATOR
VERSION 1.0

Facility: **PA Waste LLC - Camp Hope Run Landfill** Outfall: **001**
