Description:

Noah and Travis Martin have submitted an application for the renewal of their CAFO permit for their existing swine and beef operation. The operation consists of 4800 grow to finish pigs, 8 beef cows, 8 beef calves, 2 horses, and 15 beef finishers for a total of 724.41 AEUs with an animal density of 1.13 AEU/A. Since the operation has less than 2 AEU/A, it is not considered a CAO. However, because the operation exceeds the EPA threshold of 2500 pigs, it is considered a CAFO. The Department’s Individual CAFO Permit would be appropriate for this operation.

The nearest potential receiving stream is an Unnamed Tributary to Larrys Creek, designated for High-Quality Cold Water Fisheries (HQ-CWF), located in Watershed 10-A. This stream is identified to be impaired by Pathogens of an Unknown Source.

Manure/Nutrient Management:

The NMP was approved on August 28, 2021. There are 437.2 acres available on lands owned or rented by the applicant for manure application according to the NMP.

Manure Group Information:

Manure Group	Manure Generated Annually	Manure Used on the Farm	Manure Exported (gallons or tons)
Swine Manure	1.65 MG	1.95 MG	0 gal
Bedded Pack Manure	193 tons	363 tons	0 tons
Grazing	113 tons	113 tons	0 tons

Exported Manure:

Name/ Address	Amount and Source of Manure Exported per Season (gallons/ tons)			
	Spring	Summer	Fall	Winter
All manure generated on this operation is utilized by the operation on fields owned or rented by the operation, and not exported.				

Winter Manure Management:

The operation currently has no plans to spread manure generated on this operation on rented or owned fields during the Winter period.

On December 15, each underbarn manure storage will need to maintain at least 1.38 feet of freeboard to account for the estimated 130,285 gallons of manure, washwater, and other waste that is expected to enter the manure storages during the Winter period.

Manure Storage Facilities:

The operation has two identical underbarn manure storages that measure 81’ x 244’ x 6’ with a usable capacity of 885,000 gal at a 1.5 ft. freeboard, due to fan height. The operation also utilizes a roofed stacking shed that measures 29’ x 15’ x 7’ with a usable capacity of 91 tons.

Animal Mortality:

All animal mortalities will be composted in the roofed stacking shed and then land applied.

Animal Concentration Areas (Chapter 102.4a):

N/A

Chapter 102 E&S (Conservation Plans):

Plans have been verified to exist for this operation and all lands associated with the operation.

Downstream Public Water Supplies:

The nearest downstream public water supply is Jersey Shore Joint Area Water Authority, located 10 miles downstream in Jersey Shore, PA. This operation is not expected to have any adverse impact on the public water supply.

Compliance History:

N/A

Public Participation:

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.
