| Purpose of Application | <u>Removal of Outfall 004 is also requested.</u> | | |

Internal Review and Recommendations

No comments were received from the public or the permittee.

An internal review of the draft permit requested that reporting requirements for total phenols are added to the permit due to the addition of mulch on the site. Mulch pile leachate can potentially contain high concentrations of phenols and should be monitored accordingly.

It is recommended that the permit is redrafted for an additional thirty day commenting period.
