Summary of Review

Lindy Paving Inc. submitted a renewal application on July 20, 2023, requesting reissuance of Individual NPDES Permit No. PA0271446 which was then issued on September 2, 2025. After issuance of the Individual Permit, the permittee notified the Department that the facility had removed all activities associated with asphalt emulsion from Outfall 001 in 2024 and therefore was not subject to the ELGs linked to asphalt emulsion.

The amendment application requested the removal of monitoring requirements related to asphalt emulsion and all outfalls be changed to a semi-annual schedule consistent with salt storage in Appendix K of the PAG-03 General Permit. Outfalls 001 and 003 have been amended to contain the Appendix K PAG-03 General Permit monitoring requirements associated with salt storage and Outfall 003 has become representative of Outfall 002 due to hazardous terrain.

Public Participation

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Water Quality-Based Limitations

Comments: Stormwater only discharges are not modeled under current Department water quality review practices. Water quality criteria compliance is determined under low flow (Q₇₋₁₀) conditions, where stormwater influences would not be accurate.

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (386-0400-001), SOPs and/or BPJ.

Outfall 001 & Outfall 003, Effective Period: Permit Effective Date through Permit Expiration Date.
