Summary of Review

The permittee is requesting reissuance of Individual Permit No. PA0288497 which is set to expire on October 31, 2025. This is an existing discharge serving a single home which discharges into Tributary 36154 to Shenango River (WWF).

The existing facility consists of (WQM Permit No. 4320409): A Norweco Model 960-500 GPD with 3 chambers; pretreat, aeration, final clarification, and a Norweco AT 1500 UV disinfection unit.

Act 14 notifications were submitted and received.

Yearly AMRs have been submitted and the system appears to be operating as designed.

There are no open violations in WMS for the subject Client ID (375428) as of April 14, 2025.

Public Participation

DEP will publish notice of the receipt of the NPDES permit application and a tentative decision to issue the individual NPDES permit in the *Pennsylvania Bulletin* in accordance with 25 Pa. Code § 92a.82. Upon publication in the *Pennsylvania Bulletin*, DEP will accept written comments from interested persons for a 30-day period (which may be extended for one additional 15-day period at DEP's discretion), which will be considered in making a final decision on the application. Any person may request or petition for a public hearing with respect to the application. A public hearing may be held if DEP determines that there is significant public interest in holding a hearing. If a hearing is held, notice of the hearing will be published in the *Pennsylvania Bulletin* at least 30 days prior to the hearing and in at least one newspaper of general circulation within the geographical area of the discharge.

Changes Since Last Permit Issuance: N/A

Other Comments:

This SFTF was designed where applicable in accordance with the SFTF Manual, but it does not qualify for the PAG-04 General Permit due to the use of a Norweco Model 960 without a Hydro-Kinetic Bio-Film Reactor (HKBFR).

In accordance with SOP, no modeling was conducted since this is an SRSTP.

Proposed Effluent Limitations and Monitoring Requirements

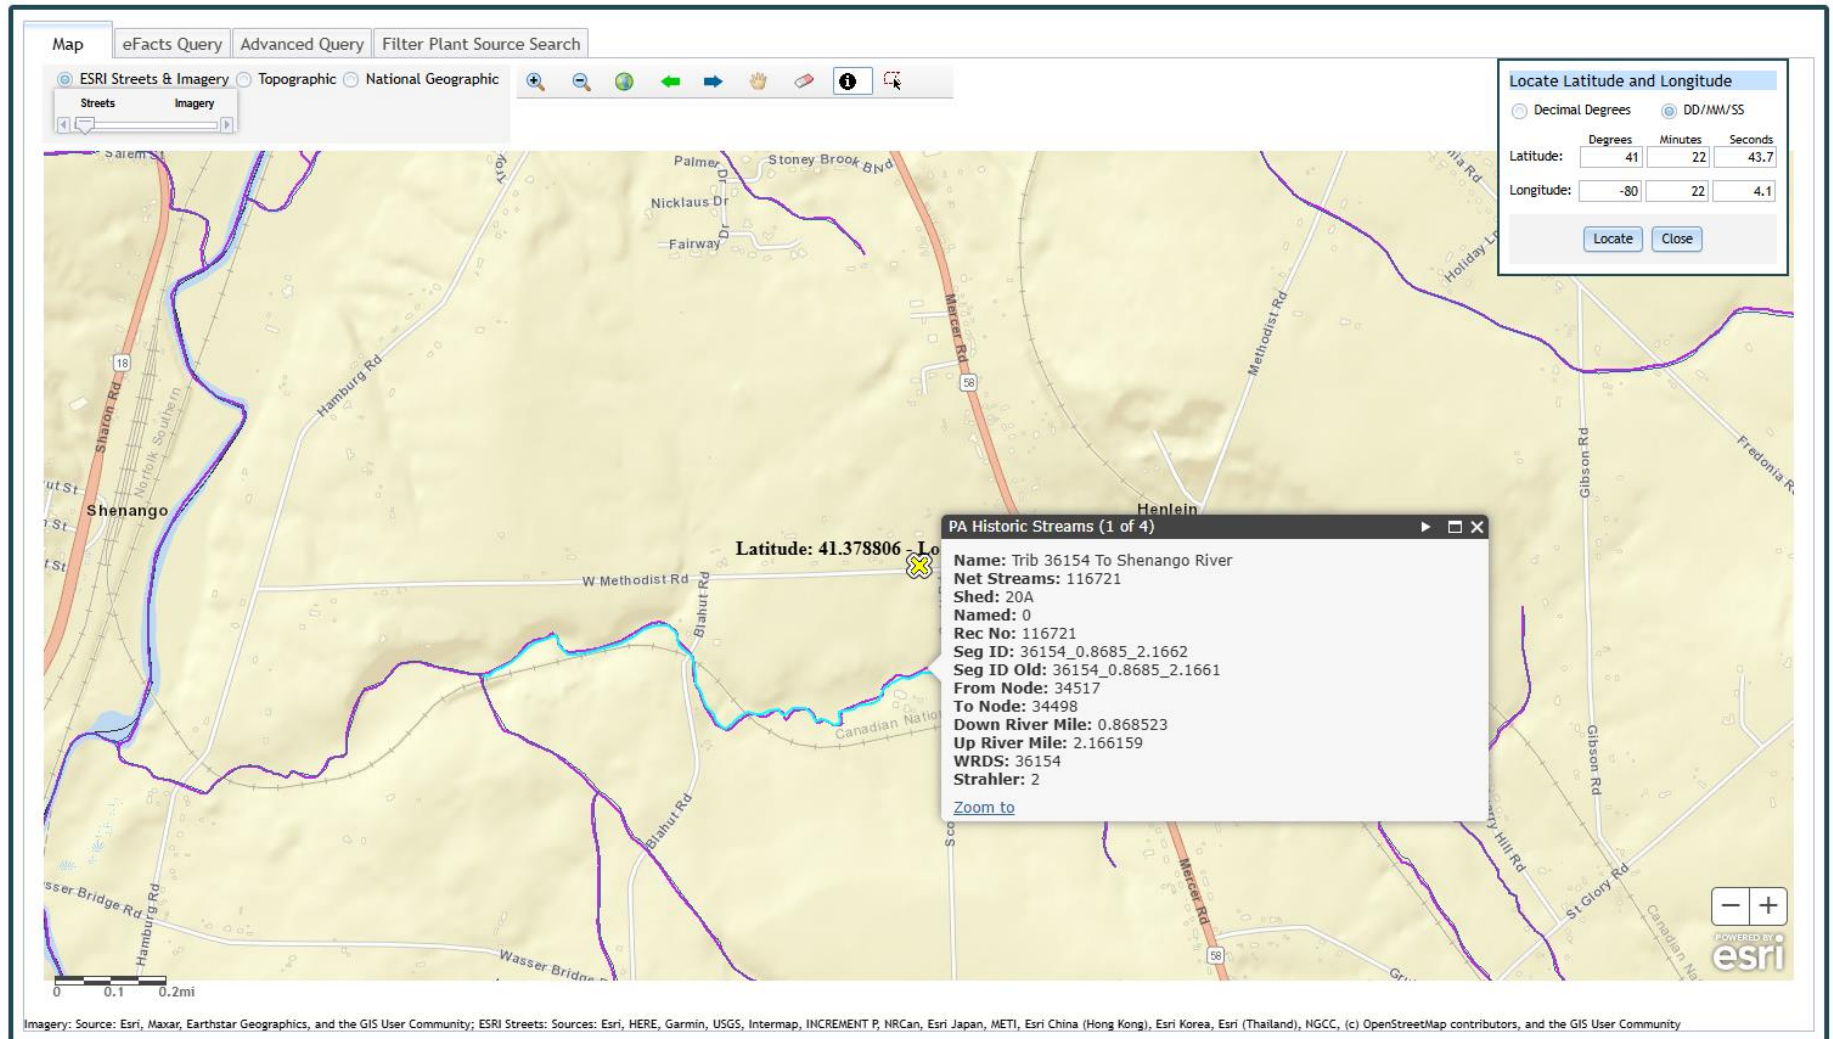

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.
